Notes:

DTW = Depth to water from the top of casing/pvc
DTP = Depth to product from the top of casing/pvc
DTB = Depth to bottom from the top of casing/pvc
PPM = Parts per million
TBI = To be installed
TBD =To be determined
EOD = Will be included at the end of the day that it was developed
bgs = Below Ground Surface
Some PDI wells are screened across multiple zones, groundwater elevation may represent a combination of zones.
TBD - To be determined. The location was not accessable to be surveyed. This data needs to be collected.
NA - not applicable. The well location wasn't present during round of gauging
PVC - polyvinyl chloride pipe
(") - inches
AM - daytime morning hours
(*) - PDI-8 was inaccesible/being advanced during the survey. Two points of rebar were surveyed on either side, adjacent to, the boring location
ND - none detected.
NM - not measured
pre-pack - well construction uses the Geoprobe Pre-Pack well materials

1-inch PVC wells do not have 2-foot sumps. All 2-inch PVC wells have 2-foot sumps.
Top of casing elevations and groundwater elevations in feet above North American Vertical Datum of 1988 (NAVD-88).
Groundwater elvations for MW-4B have been corrected for LNAPL depression using a specific gravity of 0.87.
On Jan 12, 2010, some wells were measured with either a Slope water level meter or a Solinst Oil/Water interface probe as indicated by the notes.
By measuring MW-3C by both meters, AECOM determined that readings differed by 0.01 feet (9.58 with the Solinst and 9.57 with the Slope). Therefore, 0.01 ft have been added to depth to water measurements measured with the Slope meter.
Total well depths have been corrected for the bottom of probe lengths (0.3 for the Solinst and 0.12 for the Slope).

SB-24 on Vanderveer Ave, very busy intersection non-stop traffic
Contacted Pete Cox, due to Safety issues, using equipment & Traffic devices to ~~deviat~~ Keep drillers Safe. Best traffic control device would be police detail.
