Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when

BUY RITE GARAGE INC (Continued) **1001818359**

complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Contact Phone:	(631) 224-1680
DEC Region:	2
DER Facility ID:	396848
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL" Sangesland DDO Charles Schmidgall of Aggressive Environmental 631-224-1680 Gas Station which was never registered is now under an EPA court order to pull tanks. Of 10 - 550's on site, 7 were removed, 3 are under the building and are being abandoned in place. 4 other tanks are also "probably" being pulled: Two 1080 gal, One 2000 gal, One 4000 gal. The owner would like to get two of these tanks approved for heating oil storage. Mr. Schmidgall says the excavation is heavily contaminated. He is trying to dig out as much contaminated soil as possible. Sangesland directed him to do a

METRO GARAGE INC (Continued) **U003065891**

delineation and a remediation plan. Contaminated soil letter was sent to the owner: Dennis Firpo 1188 Metropolitan Ave. Brooklyn, NY 11237 10/20/03 TJD cross reference spill #0206511. 12/9/03 TJD Spill reassigned Demeo >>> Rommel. 3/16/04-Vought-See also closed spill #0206038 at same location. PBS 2-602411 5/18/2006 - Mike - Contacted Dennis Firpo who is aware that he needs to deal with soil problem. Also spoke with Russel Construction (718-909-0148) who is doing the work with Agressive Environmental. Firpo still has fines he has to pay to the EPA. Work along with soil testing and removal of if contamination, is going to be performed within the next eight weeks by Russel Construction once the fines are paid. Gave the spill number to Russel Construction so they can report back once the work is done at the site. 10/29/10 - Austin - Reassigned from Scibelli in Albany to Ketani in Region 2 for following up and closing - end 11/9/10 - Raphael Ketani. The spill was called in on 6/17/03. The spill involved the discovery of contaminated soil while removing the tanks. The site is block and lot 2945 and 8. According to the deed dated 12/23/93 in ACRIS, the owner is Diecor Realty Corp., 1176 Metropolitan Avenue, Brklyn, 11237. The PBS is #2-602411. There were 23 tanks. The first 14 were closed and removed on 2/1/99. Tank #15 is a 550 gal. UST with #2 oil. Tanks #16 to #23 are each 4,000 gals. and contain either gasoline or diesel fuel. The owner is listed as Die Cor Realty Corp., 1194 Metropolitan Avenue, Brklyn. Dennis Firpo is the contact at (718) 628-5000. Mail goes to Mr. Firpo (718) 381-5050 at 1188 Metropolitan Avenue. There is no paper file. There is only a CSL in the E-docs. There are 4 other spill cases for 1188 Metropolitan Avenue. These are closed cases: 0011310; 0206038 (referred to this case); 0206511 (referred to this case); 0711153. In general, the cases involved spills of oil onto the ground and into the sewers, and contaminated soil. I tried to contact Mr. Firpo, the owner, at (718) 381-5050. I reached his secretary. She said that he wasn't in yet, but that she will give him my message. I asked her whether the addresses 1176 and 1194 were part of the same company. She said that she didn't think they were. I asked her whether (718) 628-5000 was also Mr. Firpo's number. She said that I could call this number, too. Mr. Firpo called me back. He said that Russel Construction (718) 909-0148 had done all of the tank pulling and cleaning. He said that he wasn't sure whether he had the cleanup report, but he will look for it. I told him that if he doesn't have the report and Russel doesn't have the report, then a new investigation will need to take place. I asked him what the correct name of the company was. Mr. Firpo said it's called Metro Garage. I tried to contact Russel Construction and request a copy of the cleanup report, but I could only leave a phone message for "James." 11/15/10 - Raphael Ketani. Mike Gimelfarb of GE Consulting (718) 997-1282/ cell (917) 868-4713/e-mail gimelfarb.m@att.net called regarding the site. He said that he was the consultant on the job. He thought that all of the reports had been sent to the DEC. I told him that we had nothing. He said that he will look into the matter. Later, I spoke to "James." He said that the phone number I had called was his number, not that of Russel Construction. He had no forwarding information regarding Russel Construction. Next, I tried to contact Mr. Firpo. However, again, I reached one of his secretaries. I left a message that I could not get the cleanup report from Russel Construction and that he was responsible for either providing the report or doing another investigation. Mr. Firpo returned my call. He said that he contacted his architect, Mr. Gimelfarb, and Russel

METRO GARAGE INC (Continued) **U003065891**

Construction. He said that they, as well as he, are looking for the cleanup report. 12/14/10 - Raphael Ketani. Rich Spadalik of ARCO (631) 586-5900 called to request information regarding the spill. He wanted to know who were the parties involved in the cleanup of the site. I gave him the various names. Mr. Spadalik said that Russel Construction went out of business. He tried to contact them (as they owed him money), but he had no success and couldn't find them. He said that he will look for any documents that he has. 2/18/11 - Raphael Ketani. As there has been no response in some time from either Mr. Firpo or Mr. Gimelfarb, and as I haven't received the remediation report, I sent a followup letter to Mr. Firpo. I set a deadline of March 18, 2011 for the remediation report to be submitted or for another soil investigation to take place. 3/3/11 - Raphael Ketani. Mr. Gimelfarb [(718) 997-1282/ cell (917) 868-4713/e-mail gimelfarb.m@att.net] called me today. He wanted to know what Mr. Firpo needed to resolve the spill case. I told him that either he should send me the complete remediation report for the work that was performed previously or he should start a new investigation. Mr. Gimelfarb stated that Russel Construction did the work. However, they were out of business and so the remediation report could not be obtained. I told Mr. Gimelfarb that, in such a case, a new investigation will have to be performed. I told him that Mr. Firpo had until March 18 to send the DEC a work plan for the new investigation. Mr. Gimelfarb said that he understood. Later, Sandy of Volumetric Techniques (VTEQE) (631) 472-4848 called. He wanted to know what the site was about and what the DEC was asking to be done. I told him that the DEC was requiring a full soil and groundwater contamination delineation and groundwater flow determination. He said that he will submit a proposal to Mr. Firpo. He said to contact him in 3 weeks if DEC doesn't hear back from him. 3/14/11 - Raphael Ketani. I spoke to Ariel Czemerinski cell (516) 987-1662. He wanted to know what type of work was required at the site. I told him that the soil and groundwater contamination will need to be delineated and the groundwater flow direction will need to be determined. 3/18/11 - Raphael Ketani. As the work plan had not been submitted by today, the deadline that was indicated in the followup letter, I sent a STIP package to Mr. Firpo. I set a deadline for submission of the signed STIP of April 15. 3/23/11 - Raphael Ketani. The green return card was received with a squiggle as someone's signature in the signature box. Today, I received the soil and groundwater delineation work plan from Volumetric Techniques (VTEQE), Ltd. dated 3/22/11. I began my reivew. 3/24/11 - Raphael Ketani. Jared Bretas (212) 788-3220 of the Mayor's Office of Environmental Remediation called. He said that there is a tax lene on Mr. Firpo's property. The Mayor's Office is trying to estimate how much the property is worth in preparation for an auction. I read some of the case notes to Mr. Bretas. He thanked me and the call ended. 3/28/11 - Raphael Ketani. I finished my review of the VTEQE work plan. They proposed 5 boring locations which they estimated to be on the downgradient side of 3 abandoned tanks, 5 active tanks and 3 pump islands. They will collect the most contaminated soil sample, the lowest dry soil sample and a groundwater sample from each boring. As this is an initial investigation, I found the plan to be acceptable. I called up Sander Sternig, Director (631) 472-4848, and told him that the plan was acceptable and to proceed as soon as possible. 4/15/11 - Raphael Ketani. The investigation report was due today. I tried to contact Mr. Sternig (631) 472-4848, but could only leave a message. The

METRO GARAGE INC (Continued) **U003065891**

message stated that the report was due today. I spoke to Mr. Firpo (718) 381-5050. I asked him why the STIP wasn't sent in. He said that he had given Mr. Gimelfarb all of his paperwork. I told Mr. Firpo that he needed to send the signed STIP to the DEC and today was the due date. I added that he was risking receiving fines and penalties by not sending in the STIP on time. Mr. Firpo said that he will contact Mr. Gimelfarb and try to find out why the STIP wasn't sent in. I asked Mr. Firpo who he had retained as a contractor. He said that it was VTEQE. I told him that the DEC had approved the work plan some time ago and we are now waiting for the investigation report. Mr. Firpo said that he will get back to me. Later, Mr. Firpo called me and said that he had the STIP. He said that he will FAX the signed STIP and send the original by regular mail. I received the FAXed version of the STIP a little while later. 4/16/11 - Raphael Ketani. Mr. Sternig (Sandy) (631) 472-4848/cell (631) 514-1094 called me today, saturday, and left a message. He said that the investigation work was conducted on 4/8/11. There was contamination upgradient. End point samples were taken. The samples have been sent to the lab. 4/18/11 - Raphael Ketani. Today I received the signed STIP with the original signature which had arrived by regular mail. I walked it up to our legal division with a cover memo to our director, Suzanne Matei. 4/21/11 - Raphael Ketani. I received the STIP package with the approval signature of Suzanne Matei, Director of Region 2. I sent the approved STIP to Mr. Firpo. 5/23/11 - Raphael Ketani. I spoke to Mr. Sternig (Sandy) (631) 472-4848/cell (631) 514-1094. He said that he received the analytical results. There is gasoline contamination both upgradient and downgradient. The concentrations of the different analytes are very similar. There is a gas tank on the property. However, the upgradient sample was taken at the edge of the sidewalk where there is another property (57 Varick?) that has a gas tank, according to Mr. Firpo. Mr. Sternig said that he will not submit the investigation report as Mr. Firpo owes him lots of money. I tried to contact Mr. Firpo (718) 381-5050, but I could only leave a message that the DEC needed to receive the investigation report.

Remarks: spill at gas station taking out tanks discovered spill req dec to call him

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By:	GWCROSS
Site Description:	The Greenpoint Energy Center is located in the Greenpoint section of Brooklyn, New York. The surrounding area is dominated by industrial and commercial uses with a limited residential area northwest of the the site.
Env Problem:	The site is impacted by MGP residuals. Coal tar is present at the site. KeySpan has proposed to remediate the most accessible contamination and leave the remaining contamination in place. The proposed remedy is under review by the department.
Health Problem:	Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF

GREENPOINT ENERGY CENTER (Continued) **1000333143**

DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 9

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 9

Waste code: D005
Waste name: BARIUM
Amount (Lbs): 5060.6

Waste code: D007
Waste name: CHROMIUM

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD" 9/13/01. J.Krimgold called Shawn Davis of Keyspan and left message. 7/26/06 - Mike - Bart Palozzotti is now attatched to the number 516-545-5511. Unsure if Shawn Davis left Keyspan. Unable to get a hold of Bart. This spill case was reassigned from Bishop to Zhune 02/10/07 Bart Palozzotti sent informartion. Miller Environmental Group did the cleaned up. I received invoice, Daily job report and the waste manifest. Spill Closed
Remarks:	FAULTY VALVE ON TRUCK MAY HAVE CAUSED SPILL-CONTRACTORS ENROTE FOR CLEANUP.

Updated By:	GWCROSS

Site Description: The Greenpoint Manufactured Gas Plant(MGP) site is a large parcel located along Newtown Creek at 287 Maspeth Avenue in Brooklyn,NY in Kings County. The site is currently known as the Greenpoint Energy Center, and houses a major liquefied natural gas storage facility and compressor station, an operations center for KeySpan's distribution and service units, and a warehouse facility. Surrounding land uses are mixed industrial, residential, and commercial. A large MGP and byproduct coking operation operated on the site from 1928 until 1952. Coal tar has been found in subsurface soils, but the full extent of contamination has not yet been established. The surrounding neighborhood also conatins a large petroleum spill, apparently unrelated to the MGP. A VCA to address the northeast corner of the property is listed under V00631. This work was undertaken to allow expansion of the existing liquefied gas facility, and included a relatively small portion of the site. Site characterization is being performed to gather information on bulkhead replacement construction.

Env Problem: According to the USEPA a preliminary assessment (PA) was prepared for the site dated September 24, 1986. The PA was not submitted or reviewed. A draft preliminary site investigaiton report was submitted to the Department in June 2004 for the northeast corner of the site. This report noted MGP DNAPL found across the site in the shallow depths (0-5 feet bgs) This material caused most of the soil samples to fail standards for several SVOCs including naphthalene,

K - GREENPOINT MGP - ENERGY CENTER (Continued) **S100494601**

	benzo(a)pyrene, and benzo(a)anthracene. The area noted was addressed in an IRM, but should be representative of a best-case for the site as a whole as it was in an area which was not actually part of the MGP operations. These exceedances represent a significant threat to the environment, This material is also known to contribute to groundwater contamination and sediment contamination. The site's location, adjacent to Newtown creek, means there is a potential for DNAPL to be leaking into the creek, contaminating sediments and surface water.
Health Problem:	Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility name: NYCDEP - GENERAL STOREHOUSE #1
Site name: GENERAL STOREHOUSE #1
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Waste code: D018
Waste name: BENZENE

Waste code: B004
Waste name: B004

Waste code: B007
Waste name: B007

Violation Status: No violations found

FINDS:

Registry ID: 110014359096

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE

SIGNS & DECAL CORP. (Continued) **1000318791**

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Facility Has Received Notices of Violations:
Regulation violated: SR - 371.1(f)(7)

Environmental Interest/Information System

SIGNS & DECAL CORP. (Continued) **1000318791**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: U201
Waste name: 1,3-BENZENEDIOL

Waste code: NONE
Waste name: None

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Biennial Reports:

Last Biennial Reporting Year: 2011

Annual Waste Handled:
Waste code: D001

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

JOSEPH H LOWENSTEIN CO (Continued) **1000116560**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MULQUEEN" TANK REMOVAL. SOIL AROUND FILL CONTAMINATED, STOCKPILED. SAMPLES TAKEN. SOIL SAMPLES SHOWED HIGH SEMI-VOLS. TCLP DONE ON SAMPLES 11/3/03 - AUSTIN - REVIEW OF PBS FOR SITE FOUND ALL TANKS CLOSED OUT - CLOSURE REPORT IN UNASSIGNED SPILLS FILE - REASSIGN THIS REPORT AS PART OF PROJECT TRANSFERS BETWEEN SECTIONS - END 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 10/30/06 Reassigned from Tang to Sun. (MS) 8/6/07: Tank Closure Report re-located. Performed by Apex Environmental in February 1999. Reviewing for possible closure. (JS/MS) 9/11/07: All VOC was non-detect, SVOC was above but re-submited for TCLP and was below. (JS/MS) 9/12/07: TCR from APEX shows that site has been adequetely cleaned after the removal of fuel, diesel, and waste oil USTs. Approx 300 tons of soil was disposed of properly and the excavations were all backfilled with certified clean fill. A NFA letter was sent to Phyllis Tainish - the representative of Roadway Express Inc., at 1077 Gorge Blvd in Akron, OH 44310. This spill case closed on 9/12/07. (JS/MS)
Remarks:	CALLER STATES A MINOR SPILL ON GROUND. CLEAN UP HAS BEEN ARRANGED.

DEC Memo: Phase 2 being done for a property transfer. Two groundwater samples slightly over limits for Benzene. Property Owner is: North American Terminals Management Inc. Attn: Miss Coleman Natmi Truck Terminals LLC c/o LaSalle Investment Management Inc. 100 East Pratt St.20th Flr Baltimore, Maryland 21202 No CSL letter was sent out, because Mr. Kearns said a full "Phase 2" report was completed and he believes NYSDEC "may" just close the case out with the minor benzene numbers. Sangesland asked Mr. Kearns to submit the report to Hasan Ahmed and wait for further direction from the DEC for either closure or additional work. 02/24/10-HRAHMED-Deric Kearns (267 685 1800) called to get an update. As k him to send me an electronic version of the report.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110004375872

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ROADWAY EXPRESS (Continued) **1004756458**

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By:	JAAVERSA

Site Description: The site is located in a mixed residential/commercial/industrial area of the East Williamsburg section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Vandervoort Avenue and Richardson Street. The site is completely covered by a one-story brick building. The site is currently occupied, and is utilized for light manufacturing. A small residential area is located one block downgradient (north) of the site. The site was historically operated by Klink Cosmo Cleaners from the mid-1950's until sometime around 1995. The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID #224121). This location was specifically targeted for investigation based on interviews with multiple residents indicating

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

	the site s former usage as noted above (including one former employee), and the Phase 1 EDR report which lists the cleaners as a generator of F002 waste (spent halogenated solvents).
Env Problem:	The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found on-site in shallow groundwater at concentrations up to 33,000 ppb. PCE has also been found at 310,000 ug/m^3 in an on-site soil gas monitoring well. Groundwater standards have been exceeded for PCE. The plume of PCE-contaminated groundwater has migrated at least 1,200' downgradient of the site. Soil vapor with elevated levels of PCE has been found in sub-slab samples collected from the nearby downgradient residential area. The site poses a significant environmental threat due to ongoing release of PCE into soil and groundwater.
Health Problem:	Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

BROWNFIELDS:
Program: BCP
Site Code: 407689
Site Description: The site is located at 202-218 Morgan Avenue, an urban area, in the north end of the Borough of Brooklyn, Kings County. The site is currently undeveloped with no standing structures and is zoned for industrial use. The site property is approximately 2.791 acres in size and approximately 2 miles east of East River. To the north of the property is a warehouse, to the east and south is English Kills tributary to the Newtown Creek and to the west it is bordered by Morgan Avenue, between Ten Eyck Street and Stagg Street. The surrounding parcels are currently used for a combination of commercial and industrial. The site was previously used as a scrap metal yard. Activities related to this type of business and the fact that the site consist mostly of fill material are believed to be the cause of the site wide PCB and metals contamination. The site remedial program is being performed by Frito-Lay, Inc. as a volunteer in the DEC's Brownfield Cleanup Program. As of this update, completed investigations include a phase I preliminary site assessment (2006) and Phase II Environmental Assessment (2007). The site owner was accepted to the Brownfield Program and a site investigation has been completed. A Remdial Work Plan is under review.
Env Problem: Based upon investigations conducted to date, the contaminants at the site known at this time include: chlorinated VOCs; SVOCs, metals and PCBs. The predominant VOCs consist of: cis-1,2-dichloroethene; vinyl chloride and tetrachloroethene. Tetrachloroethene is found in soil at concentrations as high as 140 ppm at SB-11, located at the center of the site, which exceed the soil SCO for unrestricted use of 1.3 ppm. The predominant SVOCs are the carcinogenic PAHs: benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; chrysene; dibenzo(a,h)anthracene and indeno(1,2,3-cd)pyrene. These PAHs are found consistently throughout the site from the surface to a depth of 11ft at concentrations as high as 110 ppm. PCBs and metals appear to be the primary contaminants of concern. These contaminants are found throughout the surface and sub-surface soils of the entire site. Maximum concentration of PCB's detected in soil was 3,200 ppm which greatly exceeds the soil cleanup objective (SCO) for unrestricted use (0.1 ppm). The metals that exceed SCGs are: arsenic (upto 168 ppm, unrestricted SCO 13 ppm); barium (upto 1,980 ppm, unrestricted SCO 350 ppm); chromium (upto 1,610 ppm, unrestricted SCO 30 ppm); cadmium (upto 60.8 ppm, unrestricted SCO 2.5 ppm); copper (upto 14,000 ppm, unrestricted SCO 50 ppm); lead (upto 110,000 ppm, unrestricted SCO 63 ppm); mercury (upto 15.1 ppm, unrestricted SCO 0.18 ppm); nickel (upto 933 ppm, unrestricted SCO 30 ppm) and zinc (upto 43,800 ppm, unrestricted SCO 109 ppm). These metals are found throughout the site from the surface to a depth of 11ft. Greater concentrations predominately exist at the southern portion of the site. Groundwater data indicates vinyl chloride, cis-1,2-dichloroethene and arsenic are above Class GA groundwater standards. Vinyl chloride was found above the groundwater standard of 2 ppb in monitoring well MW-2 in the southwest corner of the site at a concentration of 42 ppb. Vinyl chloride and cis-1,2-dichloroethene are breakdown products of PCE and TCE. While chlorinated VOCs (primarily PCE) have been found in site

FRITO LAY (Continued) **S109416391**

soil, data suggests that CVOCs found in on-site groundwater (DCE/VC) may be attributable to a potential off-site source. Arsenic concentrations in groundwater are 42.9 ppb and 74.6 ppb at monitoring wells MW-3 and MW-4 which exceed the groundwater standard of 25 ppb. The site is approximately 13 feet above mean sea level. Depth to groundwater is approximately 11 to 15 feet below ground surface. The nearest water body is the English Kills tributary to the Newtown Creek, which is adjacent to the east and south sides of the site. Groundwater flow is to the southeast. The site consists of fill material to the water table. Below the fill material the site is underlain by unconsolidated cretaceous to quaternary age sand and gravel deposits that comprise Long Island groundwater system. The site presents a significant environmental threat due to the ongoing release of arsenic contamination from source areas in the soil to groundwater as well as the high levels of PCBS and metals such as lead and mercury in soil throughout most of the site. More information regarding the site can be found in the documents placed in the site document repository.

Health Problem: Contact with contaminants in on-site surface soil is not expected since the site is completely fenced and monitored. Exposure to site-related contamination in drinking water is not expected since the area is served by municipal water. Since the site is currently unoccupied exposure to site contaminants through soil vapor intrusion is not a concern. However, the potential for soil vapor intrusion to occur in future construction will be evaluated during the upcoming remedial investigation.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status:	Order Signed
Nature Of Action:	IRM - Soil Removal
Env Prob Assessment:	Not reported
Site Description:	This property is located in Brooklyn (Block #2962 - lots 1, 5, & 37), and is owned by Rhino Trust (Albert Realty Co.). The site is a vacant lot, except for two, one-story shed buildings in a state of disrepair. The site has a development history dating back to the early 1900's; site uses have included an asphalt paving company and a lumber company. As a result of an environmental survey of this site conducted in 1988 and 1989, traces of 4-chloroaniline, pentachlorophenol, butyl-ben zylpthalate;di-N-butylphthalate and flouranthene were found. Metals and total petroleum hydrocarbons were also found in the soils, surface and groundwater. Contamination of soils by metals was found to include: silver, barium, cadmium, chromium, iron, lead and copper. Concentrations of metals in the groundwater exceeded groundwater quality standards for lead and iron. Rhino Trust has carried out a supplemental site assessment under a consent order in the summer of 1992. An interpretation of the analytical results from the previous investigation has been inconclusive due to data gaps in the reports. Rhino Trust performed a Supplemental Site Assessment, and the fieldwork was completed in 1994. The PRP has removed the contaminated soils. Hazardous waste is no longer present and significant threatno longer exists.
Confirmed HW:	lead (D008 Waste): unknown
Environment Assesment:	Contaminated soils have been removed but groundwater contamination evidently due to construction and demolition debris (non-hazard

An interpretationof the analytical results from the previous investigation has been inconclusive due to data gaps in the reports. Rhino Trust performed a Supplemental Site Assessment, and the fieldwork was completed in 1994. The PRP has removed the contaminated soils. Hazardous waste is no longer present and significant threatno longer exists.
Env Assessment:	Not reported
HW Disposed/Quantity:	Not reported
Assess/Env Prog:	Contaminated soils have been removed but groundwater contamination evidently due to construction and demolition debris (non-hazardous), still exists.
Assess/Health Prob:	The environmental surveys report show that on-site soils are contaminated to various degrees by some metals, semi-volatile organic compounds and total petroleum hydrocarbons. Potential contamination of the English Kills (the adjacent surface waterbody) and adjacent properties, via soil migration and runoff, is a possibility. The site is located in an industrial neighborhood and is fenced with site access controlled by guards. The potential for contact and ingestion of on-site soils is minimal as the surface of the site is heavily compacted. Site access is limited to workers only and is of short duration. No public or private water supply wells are known to be present in the area although there exists the possibility of contaminantmigration in groundwater via an apparent hydrological connection to the English Kills.

Record Add:	10/28/2008 10:06:00 AM
Record Upd:	6/23/2010 11:38:00 AM
Updated By:	JAAVERSA
Site Description:	The site is located in a mixed residential/commercial/industrial area of the East Williamsburg section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Vandervoort Avenue between Anthony and Lombardy Streets. The site is completely covered by a multi-story brick building. The site is currently occupied, and is utilized for metal fabrication. A small residential area is located one block south of the site. The site has been utilized as a metal fabricator and painting facility since the 1930's. The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID #224121). This location was specifically targeted for investigation based on Sanborn fire insurance map data indicating the site s former usage as noted above, and the Phase 1 EDR report which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing).
Env Problem:	The primary contaminant of concern at the site is trichloroethene (TCE). TCE has been found on-site in shallow groundwater at concentrations up to 66,000 ppb, and in deep groundwater at concentrations up to 70,000 ppb. TCE has also been found in on-site soil gas at 2,100 ug/m^3. Groundwater standards have been exceeded for TCE. The plume of TCE-contaminated groundwater has migrated at least 400' off-site. Soil vapor with elevated levels of TCE has been found in sub-slab samples collected from the nearby residential area. The site poses a significant environmental threat due to ongoing release of TCE into soil and groundwater.
Health Problem:	Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

Updated By:	JAAVERSA
Site Description:	The site is located in a mixed residential/commercial/industrial area of the East Williamsburg section of Kings County (Borough of Brooklyn, New York City). The site is located on the southeast corner of the intersection of Anthony Street and Porter Avenue. The site is covered by a multi-story brick building and a portion of a storage lot adjacent to the building on its eastern side. The site is currently occupied, and is utilized as a warehouse. A small residential area is located two blocks south of the site. The site had been utilized as a brass foundry from the mid-1960's to approximately 1993. The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID #224121). This location was specifically targeted for investigation based on Sanborn fire insurance map data indicating the site s former usage as noted above, and the Phase 1 EDR report which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing).
Env Problem:	The primary contaminants of concern at the site are tetrachloroethene (PCE) and trichloroethene (TCE). PCE has been found in on-site soils at concentrations up to 220 ppm, and in on-site shallow groundwater up to 6,100 ppb. TCE has been found on-site in deep groundwater at concentrations up to 12,000 ppb. Groundwater standards have been exceeded for both PCE and TCE. The unrestricted use RSCO for PCE has been exceeded. The plume of PCE and TCE-contaminated groundwater has migrated at least 400' off-site. Soil vapor with elevated levels of PCE and TCE has been found in sub-slab samples collected from the nearby residential area. The site poses a significant environmental threat due to ongoing release of PCE and TCE into soil and groundwater.
Health Problem:	Exposure to site-related contamination in drinking water and soil is

ACME STEEL/BRASS FOUNDRY (Continued) **S109416410**

unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

DER Facility ID: 229102
DEC Memo: 12/23/04 Tipple updating//all prior notes lost in database// Tipple has conducted two site visits, the last of which was 12/22 PM. There had been a machinery problem in the recycling facility which required the excavation of a large area of the floor. Tipple met with Joel Adrian of the Jacques Whitford company to conduct a visual/ olfactory inspection of the excavation. The excavation was approximately 20-25' long by 10-12' wide and extended about 6 foot below the floor surface. The excavation revealed no visual, olfactory /PID evidence of petroleum products, what the excavation did reveal was broken brick, some concrete, glass and what I observed to be "clean" brown soil. Jacques Whitford will grab one sample from this excavation and advance two geoprobe borings to groundwater and collect samples from the soil/water interface. The results of the three above described samples will be used to determine weather any additional actions will be required. 12/29/04 tipple delivering a STIP and CAP to the site while the two additional borings are being advanced. Upon arrival at the site, the Rig was too large to maneuver through the available space, the additional borings have been tentatively rescheduled for next Tuesday Jan. 4, 05 1/31/05 reviewed submission, discussed with DEC Attorney Nehila, Oliva & Nehila ok with closing if data is ok. Data has some SVOC exceedances which can be associated with the broken asphalt pieces in the urban fill material which I witnessed in the excavation. NFA letter written including a caveat which reads if excavation is to proceed, a health and safety plan must be followed.
Remarks: 11/18/04 site mtg. with contractor, purchaser, and agent. Discussed the future actions necessary to attain a NFA.

Unkonwn Quantity Recovered: True
Material: GASOLINE
Class Type: GASOLINE
Times Material Entry In File: 21329
CAS Number: Not reported
Last Date: 19940929
DEC Remarks: 10/16/96 2X4k GASOLINE FAILED UST-2000. LIQUID WAS FOUND IN ANNULAR SPACE IN 1X4K REG U/L AND 1X4K PLUS U/L. SECONDARY USTS TESTED TIGHT. WILL BE LINING THE INNER TANKS. 11/6/96 INTERIOR LINING OF 2X4K DOUBLE WALL BUFFIDE TANKS WAS COMPLETED BY WCC TANK TECHNOLOGY, INC. TANK FAILURE WAS DUE TO AN 1/8 INCH CORROSION HOLE FOUND IN THE LOWER HALF OF EACH TANK. AS REQUIRED BY NYCFD 30 PSI WITNESSES TEST OF THE PRIMARY TANK WAS SUCCESSFULLY COMPLETED ON FRI. 12/8/96. ADDITIONALLY, NYCFD REQUESTED A TEST OF THE SECONDARY TANK WHICH ALSO PASSED. 11/11/96 UST-2000 ULLAGE TEST WAS SUCCESSFULLY PERFORMED BY CROMPCO ON THE PRIMARY AND SECONDARY TANKS. IN AS MUCH AS THERE WAS NO ENVIRONMENTAL IMPACT ATTRIBUTED TO THE FAILURE OF THE PRIMARY TANKS, WITH PRODUCT BEING CONTAINED BY THE SECONDARY TANKS.
Spill Cause: both tanks 001 and 002 failed the ustest 2000 tanks will be uncovered and retested

DER Facility ID:	152951
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL" 7/29/2002-VOUGHT-Spoke with Cushing. Spill was from leak detection line. Spill confined to vault and was pumped out by Mobil contractor. Line was repaired. Reassigned from Vought to Sigona in July 2002. This spill site cleanup has been consolidated under Spill No. 0204454. 2/10/04 reassinged from Sigona to Rommel. See 0403674, 9210796, 9608849 and 0005672. Rommel Filed reviewed and spill closed on 5/25/05. The interior lining of the two 4,000 gallon double-walled tanks were fixed and tanks were pressure tested. Product was contained by secondary tank. The secondary tank was pressure tested and also passed. Sarnowicz
Remarks:	Leak found in sump leak detection system.

SHELL (Continued) **S106125711**

DTW:22-24': GWF:NE. PRODUCT IN MW-2 AND MW-3. 8/5/99 mtg: EnviroTrac will review and submit all historical data related to this site going back to the early 1990's. EnviroTrac will also review the contamination in well #3 and propose a clean up system (possibly biological) 11/03 Reassigned from Sangesland to K Foley. 11/20/03 E-mail from Steve Sangesland to Rob Rule: "It requires opening up a new spill for Amoco before closing out the old Shell spill case for the site. I believe Shell has made it's case that the present problem is due to Amoco's action, but Kerry will need to take action on it." 2/4/04 Spoke to Rob Rule. Requested he send actual historic concentration data. Data from post-1999 is indicative of a new release, however Shell needs to prove their case that concentrations were decreasing toward and close to groundwater standards. Rob indicated they have previously tried to come to an agreement with Wolf Petroleum but had no response. 2/6/04 Received email from P. Sherwood, Phoenix Environmental. He attached copy of 6/6/03 letter to S. Sangesland requesting closure. Shell sold property to Wolf in April 1992. A product recovery pump and SVE system were operated by Shell from 1993 to 1994 to address residual hydrocarbons. Groundwater sampling continued until January 2000. Samples were collected and analyzed for VOCs and SVOCs in February 2003. From July 1990 to Februrary 1998, MTBE concentrations in on-site wells MW-2 and MW-4 ranged from non-detect to 986ppb. From Februrary 1999 to February 2003, MTBE concentrations in wells MW-2 and MW-4 ranged from 619ppb to 34,400ppb. Highest concentrations of MTBE in wells MW-2 and MW-4 were 34,400ppb and 23,300ppb, respectively. From 1990 to 1991, MTBE concentrations in MW-3 ranged from 24,400ppb to 26,000ppb. Product was detected intermittently in MW-3 from 1991 to 2003. On March 30, 1998 product was not present and a groundwater sample was collected with MTBE conc at 3,990ppb. In the most recent groundwater sampling results of MW-3, collected in 2000, MTBE ranged from 181,000ppb to 842,000ppb. In 1990 and 1991, groundwater samples were collected from MW-1 and analyzed for MTBE. Concentrations ranged from 1,600ppb to 24,000ppb. MW-1 was destroyed in 1993. MTBE concentrations in MW-1 appear to be a minor spike, localized to the tank field area. This is supported by the fact MTBE concentrations in downgradient well MW-2 ranged from 14ppb to 986ppb until 1999, when concentrations increased significantly. 6/8/04 Meeting with Shell. They agreed to keep monitoring gw until legal issues have been resolved with Wolf for spill #0330060. DEC expects resolution in 6-12 months. 11/23/04 Met with P. Sherwood, B. Hoashi(Phoenix) and R. Rule(Shell). Samples collected 8/30/04 showed 0.38' free product in MW-3. BTEX ranged from 3ppb(MW-2) to 20ppb(MW-4). MTBE from 18ppb(MW-2) to 251ppb(MW-4). Requesting closure due spill under new owner. See spill #0330060.

Remarks: PRODUCT IN SITE WELL MW3. WAS SULLIVAN SPILL. RE ASSIGNED TO MULQUEEN 4/18/95. SHELL ADDRESSING PROBLEM AT SITE, SEE FILE

Updated By:	JHOCONNE

Site Description: This site has been industrialized since 1891. It is surrounded by other industries and is located east of the Kosciuszko Bridge. Newtown Creek flows along the southern boundary of the facility. Phelps Dodge Refining Corporation used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at the Laurel Hill facility have been discontinued since 1983. In 1986, the Phelps Dodge Refining Corp. excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material in a chemical waste facility in Ohio. The New York City Department of Environmental Protection completed a Remedial Investigation/Feasibility Study (RI/FS) in 1994 and indicated contamination on other areas of the site. Phelps Dodge entered into a Consent Agreement with NYSDEC for RI/FS and IRMs for this site. IRMs involving asbestos abatement, waste removal and building demolition were completed in October 2000. An RI/FS was completed in 2002 and a Record of Decision (ROD) was signed on January 23, 2003. The ROD divided the property into six Operable Units (OU-1 through OU-5 were land based, and OU-6 for surface waters and sediments of Newtown Creek). The ROD selected a remedy including hotspot soil removal; capping of the entire property; installation of a groundwater barrier wall along the creek; a groundwater extraction and disposal system; and institutional controls. The hotspot soil removal portion of the remedy was completed in 2004. In 2004, Phelps Dodge sold the property to a developer (Sagres Partners) which has further subdivided the site into various parcels. Site redevelopment is continuing in phases. Capping of several Operable Units is completed and various parcels have been developed for industrial uses. Phelps Dodge has designed a sheet steel barrier wall and groundwater treatment system. Construction of barrier wall and groundwater extraction and treatment system is completed. The Groundwater treatment system began operating in 2006.

Env Problem: The primary contaminants of concern at the site are heavy metals (including cadmium, chromium, copper, lead, mercury, and others), petroleum related hydrocarbons, and PCBs. Investigations indicate a plume of groundwater contaminated with metals exists underneath the property. Even though hot-spot soil removal has been completed, the property still contains elevated levels of heavy metal and semi-volatile contamination of soils. Under the ROD, these will be managed through placement of a site cap, a site management plan, and institutional controls. The property is fenced and secured and is

PHELPS DODGE REFINING CORPORATION (Continued) **S103350610**

	undergoing remediation. A groundwater extraction and treatment system is operational.
Health Problem:	The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

Site Description:	The site is located in a mixed residential/commercial/industrial area of the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. The site is completely covered by multiple buildings of varying construction and height. The site is currently occupied, and is utilized for a variety of purposes (residential, warehousing, woodworking shop, etc.). A large residential area is located immediately adjacent to the site, and extends south along both Kingsland Avenue and Monitor Street. The site was historically operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID #224121). This location was specifically targeted for investigation based on Sanborn fire insurance map data indicating the site s former usage as noted above.
Env Problem:	The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found on-site in shallow groundwater at concentrations up to 39,000 ppb. PCE DNAPL has been found on-site at concentrations up to 730,000 ppm (73%) in deep monitoring wells. Groundwater standards have been exceeded for PCE. PCE-contaminated soil vapor could potentially be migrating toward nearby residential areas. Soil vapor with elevated levels of PCE has been found in sub-slab samples collected from the nearby residential area. The site poses a significant environmental threat due to ongoing release of PCE into soil and groundwater.
Health Problem:	Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

Site Description: The Quanta Resources Site is an approximately 1.8 acre parcel located at 37-80 Review Avenue, within a highly industrialized area of Long Island City, Queens, New York. Zoning in this area is designated as heavy manufacturing. The site is bounded on the northeast by Review Avenue and on the southwest by the Southern Line of the Long Island Rail Road (LIRR). On the northwest it is bounded by an alley (Preston Street) that runs from Review Avenue to the LIRR tracks. On the southeast it is bounded by the property currently owned by Phoenix Beverages (an imported beer distributor). Farther to the northeast, across Review Avenue, is Calvary Cemetery. Farther to the northwest, across the alley, is the North Capasso property, also referred to as Review Avenue Development I (RADI). Farther to the southwest, across the LIRR tracks, is the South Capasso property. Newtown Creek lies beyond the South Capasso property farther to the southeast approximately 450 feet from the site. Fencing bounds the property on all sides. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, PCBs, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the public comment period closed on August 3, 2006. The ROD was signed 2/9/07 requiring a $15,560,000 remedy which includes an LNAPL recovery system. Remedial Design is underway. The Quanta Resources property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. The site has been inactive since being abandoned in

QUANTA RESOURCES (Continued) **S108413225**

November 1981. Tanks and several buildings remain on site. A number of potential LNAPL source areas existed on the Quanta Resources Site throughout its operational history, however, the primary suspected source area is the tank farm area located in the northeastern portion of the site. A New York City emergency remedial action removed approximately 640,000 gallons of waste oil from the property. Some of the waste oil contained tetrachloroethene, methyl chloride, 1,1,1-trichloroethane and trichloroethene. Sludge, waste oil, and diesel fuel, all contaminated with PCBs, were also removed from badly deteriorated leaking tanks and drums. As part of NYSDEC's Phase II Investigation, three on-site groundwater monitoring wells were installed. During installation it was discovered that there was a seven foot layer of oil lying above the groundwater table. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the public comment period closed on August 3, 2006. The ROD was signed 2/9/07 requiring a $15,560,000 remedy which includes an LNAPL recovery system. See Site Code C241005 for post ROD updates.

Env Problem: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents,heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. ROD signed 2/07. Site has transitioned into the Brownfield program. Site is now tracked as Review Avenue Development II - Site # C241089

Health Problem: Waste oil previously stored on-site has caused widespread contamination of groundwater and soils. Approximately 500,000 gallons of contaminated waste oil remains at the site, floating on the water table. The aquifer of concern is not used as a source for drinking water. Groundwater wells in this area of Queens are used only for commercial and industrial purposes. A fence surrounds the site restricting access and minimizing the potential for direct contact exposures to on-site contaminates. The potential exists for the floating oil plume to migrate into the nearby Newtown Creek which empties into the East River. Further investigation is required.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: The Former W.L.K. Corp. Site (58-30 57th St.) is located near the intersection of Grand Avenue and 57th Street in Queens County. The site is identified on the Queens Business Borough Tax Map as Block 2610, Lots 412 and 440 and is approximately 2.01 acres in size. The site is bordered on the north by MTA/LIRR rail lines, on the south by Grand Avenue, on the east by 57th Street, and on the west by a property owned by Start 56-19 Grand Holding LLC. The site is mostly paved, with a small area overgrown with vegetation (former railroad spur) present adjacent to the western portion of the building. The northern portion of the site has historically been used by a radiator distribution facility (1930's-1940's), a steel pipe distributor (1950's- early 1970's), corrugated box company (early 1980's), a beer distributing company (mid/late 1980's), and a recycling facility (early 1990's - early 2000's). The southern portion of the site is currently occupied by offices and has been used for several businesses. A lubricating oils company occupied this portion of the site at least from 1936 into the 1970's. Over the years other occupants included an oil company sales office, a milk products company, and an engineering firm. Also, a filling station was located on the site at the corner of Grand Avenue and 57th Street from early 1930's to early 1970's. The site is currently used as a lumber yard with some offices. The surrounding parcels are currently used for a combination of commercial, light industrial, and transportation. The closest residential area is directly across 57th Street. The regional groundwater flow direction is generally to the southwest. Previous investigations in the area, by a third party, revealed high concentrations of chlorinated solvents (specifically TCE, 1,1,1-TCA, and 1,2-DCE) in the groundwater at the northwestern portion of the site. Based upon groundwater samples results, the groundwater

FORMER W.L.K. CORP. (Continued) **S109209067**

	contamination is decreasing southward beneath the adjacent property. The groundwater contamination detected at the site indicates a source area around the loading dock located at the northern end of the site main building and/or an alley (former railroad spur) between the western property fence line and the building. A site characterization was completed and it was determined that the need exists for a full remedial investigation. As of this update, the Department entered into an Order dated 2/11/10. Remedial Investigation / Feasibility Study work plan is currently under review.
Env Problem:	The primary contaminants of concern detected in the Spring/Summer 2007 included Tetrachloroethylene (PCE) and 1,1,1-Trichloroethane (TCA) and their respective breakdown products. Exceedances of standards, criteria, and guidance in the on-site soils include TCE (max. 31 ppm), 1,1,1-TCA (1.1 ppm), PCE (max. 2.6 ppm), and total 1,2-DCE (max. 46.2 ppm). Exceedances of standards, criteria, and guidance in the groundwater include 1,1,1-TCA (max. 16 ppb), TCE (max. 710 ppb), PCE (max. 47 ppb), and total 1,2-DCE (max. 548 ppb). Samples taken off-site, adjacent to the former railroad spur area, revealed exceedances in the groundwater of 1,1,1-TCA (max. 71,000 ppb), TCE (360,000 ppb) and 1,2-DCE (max. 42,000 ppb). The site presents a significant threat to the environment due to the elevated soil and groundwater concentrations.
Health Problem:	Further investigation is needed to assess the nature and extent of site-related contamination and the potential for exposure to site contaminants. The site currently has several buildings and a paved parking lot, therefore, contact with subsurface contamination is unlikely. Exposure to site-related contaminants in drinking water is not expected because the area is served by public water. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion to occur.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Elevation:	10 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

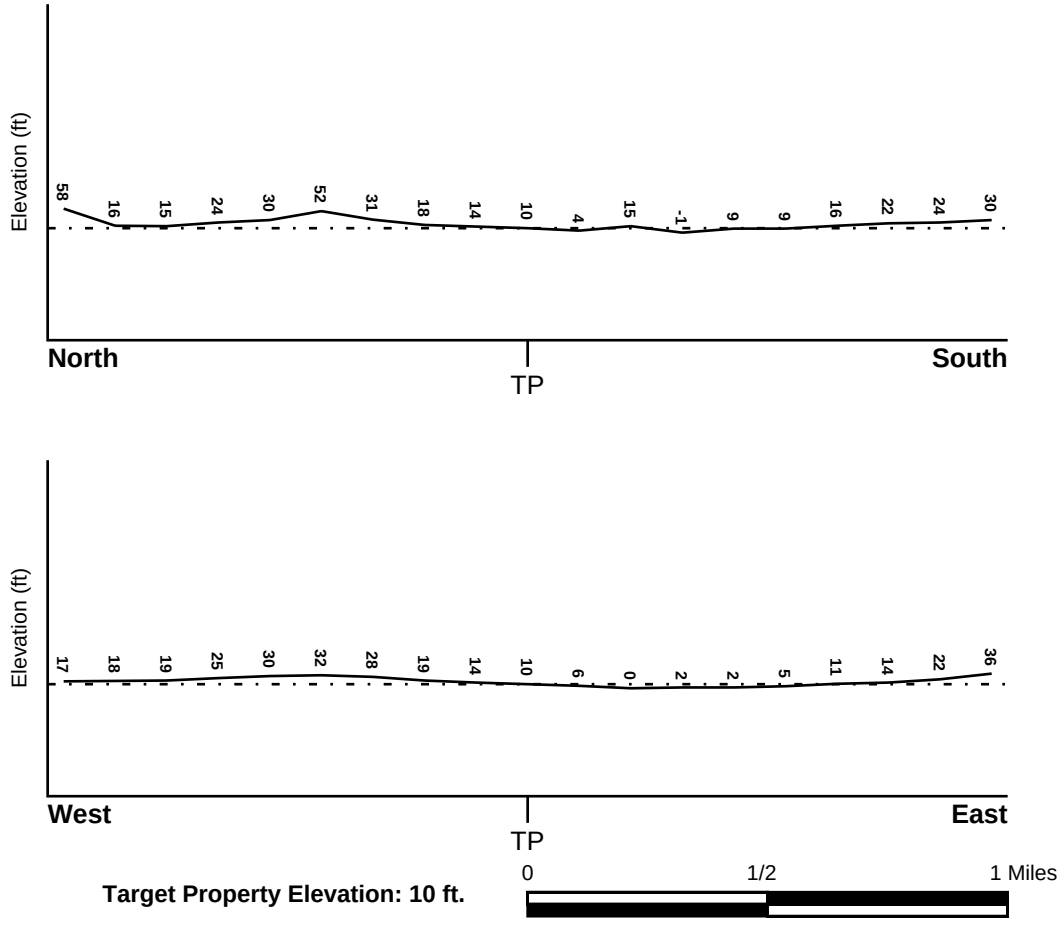
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
KINGS, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 360497 - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile NE
Site Name:	Phelps Dodge Refining Corp
Site EPA ID Number:	NYD039138789
Groundwater Flow Direction:	DEPENDENT ON WELL PUMPING RATES.
Measured Depth to Water:	not available.
Hydraulic Connection:	Salt water intrusion may be present at the site. Information about the hydraulic connection between aquifers underlying the site is not available. The depth to bedrock is approximately 60 feet.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	02/07/05: No gasoline spilled, only diesel. Snow Blower Train struck a guard timber, cracking a valve. A couple of gallons was spilled at 18th Avenue & Macdonald Avenue. The train went back to Coney Island Yard where a drip pan was placed under the leak. The product was off loaded. NYCT send a crew to apply speedy dry to Macdonald Avenue. it was all cleaned. there was some drips lost during the movement of the train back to the yard. This is minor and unrecoverable. It was determined that only 4 gallons was lost based on the volume of the tank and how much was off loaded.
Remarks:	At least 5 gallons have leaked. Snow blower train - struck unidentified object on the track - the fuel tank started leaking - while train was moving. No known water resource affected. Spill is under investigation. Spill is contained. Drum tanks have been put in place to collect any future leakage. Capacity of tank is 1100 gallons. Train was returned to Ave X after this occurred.

Sanborn® Library search results
Certification # 7594-437D-9BAB

* Environmental Data Resources, Inc. has been instructed by ENSR Consulting & Engineering to print ONLY the Sanborn Maps for the years listed below:

1995 (1)	1988 (1)	1977 (1)	1888 (1)
1994 (1)	1987 (1)	1968 (1)	
1993 (2)	1986 (1)	1965 (1)	
1992 (1)	1981 (1)	1951 (1)	
1991 (1)	1980 (1)	1933 (1)	
1990 (1)	1979 (1)	1907 (1)	

Total Maps: 20

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

Limited Permission To Make Copies

ENSR Consulting & Engineering (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Re: **On-site Groundwater Pumping Well**
Equity Former MGP Site
Site# 224050
222-254 Maspeth Avenue, Brooklyn, Kings County

Dear Mr. Willems:

I have reviewed the Groundwater Gauging, Development and Sampling Table- Table 1 for the above-referenced site. Based on that review, the data indicates that the on-site pumping well used by the current transfer facility for truck washing and dust suppression contains a 4.8 foot layer of dense non-aqueous phase liquid with a napthalene like odor. In addition, the measuring device was coated in tar when the groundwater sample and gauging/development readings were taken on December 11, 2009 and January 12, 2010. At that time, a sample was collected for chemical analysis and results are pending.

To prevent exposures to this groundwater contamination, we recommend that this well not be used for any purpose at this time. We will discuss with you, any proposed follow up and possible treatment of this well after we receive and review the analytical results.

If you have any questions, please feel free to contact me at (518) 402-7860.

Sincerely,

Albert DeMarco

Re: Cooper Tank, 222 Maspeth Avenue, Brooklyn
Industrial Wastewater Discharge Directive No. 09-D3207-1

Dear Ms. Leung,

The non-potable well that Cooper Tank uses for dust control and other purposes was found to have elevated VOC concentrations, and its use was discontinued in January 2010.

As we discussed on May 13, 2010, Cooper Tank plans to install a three stage carbon treatment system to remove organic contaminants from the well water so that it can be brought back on line. Cooper tank will continue its effluent testing program under the Discharge Directive to confirm compliance with the Department's sewer use limits.

If you have any questions feel free to contact me.

Very truly yours,

GANNETT FLEMING ENGINEERS AND ARCHITECTS, P.C.

FREDERICK H INYARD, P.E.
Vice President

DRILLER'S LOGS

BORING #: SB#1

DATE: September 7, 2006
SITE: Cooper Tank and Welding
252-254 Maspeth Ave., Brooklyn, NY

CONSULTANT: Gannett Flemings
Locust Valley, NY

DEPTH DRILLED: 15 feet
CORING DEVICE: 2" X 24"
HAMMER DROP: 30 inches
DRILLING METHOD: Hollow Stem Auger 4 1/4"

DEPTH TO WATER: 8 feet Perched
HAMMER WEIGHT: 140 lbs.
WELL/BORING GROUTED : YES

DRILLER: C. Pedersen

HELPER: E. Bedell

DEPTH FROM	DEPTH TO	RECOVERY	BLOWS / 6 INCHES	SAMPLE DESCRIPTION
0 ft	4 ft	Hand		Brown/black sand, fine, trace of gravel, construction debris
4 ft	6 ft	7 inches	7-4-3-7	Black sand/wood, fine, trace of gravel, fill
6 ft	9 ft	Auger Cuttings		Black sand, medium to fine, 10% gravel, construction debris
9 ft	11 ft	18 inches	13-19-14-5	Black/brown sand, medium to fine, 5% gravel, fill, wet, construction debris, wood, brick, concrete
11 ft	14 ft	Auger Cuttings		Black sand, medium to fine, 10% gravel, wet
14 ft	15 ft	0 inches	13-45-32-50/3"	No Spoon, wet, Refusal at 15'

Moved Hole

0 ft	13 ft	Hand / Auger Cuttings		Black/brown sand, medium to fine, 20% gravel, construction debris, Refusal at 13'

80										
	NA				SP		80'-87': See note 4.) below.			2" Diam. 0.020 PVC Well Screen
82										
		NA					76'-78': GRAVELLY SAND (SP): medium sand, 20% fine gravel, 5% coarse sand, 5% fine sand, wet, tannish brown, medium dense.			
84										
										1" Diam. PVC Sump
86										

Notes:

1.) The location was pre-cleared to 5 ft bgs by hand-digging and vactron. 2.) Boring advanced in the footprint of TP-2. 3.) No samples collected 10.5-16 ft bgs due to presence of concrete/rubble. 4.) Boring advanced from 80-87 ft bgs for well installation. 5.) Boring was converted into monitoring well MW-4C. 6.) Monitoring wells MW-4A and MW-4B were installed in adjacent borings.

44										
46	4/4	NA	0.6							
48					SP		40'-44': GRAVELLY SAND (SP): sand, 40% fine gravel, poorly sorted, dense, similar to till. 44'-48': SAA 48'-50': GRAVELLY SAND (SP): fine sand, 20% gravel, sub-rounded to sub-angular coarse sand and fine gravel to medium gravel, damp, grayish brown, poorly sorted, very dense.			
50	1/2.0	NA	0.9							
52	2.5/5.0	NA	0				50'-55': SAA			
54			0							

Notes:

1.) The location was pre-cleared to 5 ft bgs by hand-digging and vacuum extraction. 2.) PEC = Paragon Environmental Construction 3.) Boring terminated at 55 ft bgs due to drilling refusal. 4.) Boring was converted into monitoring well MW-6B. 5.) Monitoring well MW-6A was installed in an adjacent boring.

Boring and Well Construction Log

Location ID: SB-21/MW-14B

Client: National Grid	**Boring Location:** 252 Maspeth Avenue	**Total Boring Depth (ft bgs):** 110.0
Project #: 60273164	**Northing:** 686522.6 **Easting:** 649174.3	**Boring Diameter (in):** 8
Project: Equity Former MGP	**Coordinate System:** State Plane, NAD 83	**Soil Sample Collection Method:** DP
Site Loc: 9/20/2011	**Ground Elevation (ft NAVD 88):** 14.53	**Well Screen Intervals (ft bgs):** 33-43
Start Date: 9/20/2011 **Finish Date:** 9/21/2011	**Drilling Company:** Boart Longyear	**Well Sump Intervals (ft bgs):** 43-45
Logged By: Luis Ferreira	**Drilling Method:** Sonic	**Water Level (ft):** 5

Depth (ft bgs)	Recovery (ft/ft)	Blowcounts (per 6")	PID (ppm)	Visible/Olifactory Observations	USCS Code	USCS Pattern	Soil and Rock Description Classification Scheme: USCS	Lab Sample Interval	Well	Well Construction
100							GARDINERS CLAY			
102	4.5/5.0	NA	3.8		CL		100.0'-103.0': CLAY AND SILTY CLAY OF LOW PLASTICITY (CL): clay, <5% gravel, stiff, olive gray, no odor, 4 inch rock core at 102.5 ft bgs. 103.0'-105.0': SAA, interbedded fine grained sand, less stiff. 105.0'-108.0': SAA, stiff, ~35% fine grained sand.			
104		NA	2.6							
106	5.0/5/0	NA	2.4							
108		NA	1.8				108.0'-110.0': CLAY AND SILTY CLAY OF LOW PLASTICITY (CL): clay, ~20% interbedded fine grained sand and silt, very stiff, olive gray.			
110										

Notes:

1.) The location was pre-cleared to 5 ft bgs by using soft dig hand clearing methods. 2.) Boring converted into groundwater monitoring well MW-14B. Well construction details provided on separate form. 3.) Well surface constructed to grade with flushmount casing set in a concrete pad.
