Hello Patty,
For the COC attached, the sample for SB40 (20-23) needs to be revised to say SB40(20-23.5).

Thank you very much,
Jennifer

Hello Patty,
There is a missing sample ID on the COC – it is SB42 (35-37.5). Our apologies for this omission.

Thank you much,
Jennifer

Executive Summary

Overview

A data assessment was performed by Gregory A. Malzone of AECOM Pittsburgh on two data packages from TestAmerica Laboratories, Inc., 777 New Durham Road, Edison, NJ, 08817 for the analysis of soil samples collected April 29-May 1, 2015 at the Equity former MGP site.

The following analytical methods were requested on the chain-of-custody (CoC) records.

- Volatile Organic Compounds by USEPA SW-846 Method 8260C
- Semivolatile Organic Compounds by USEPA SW-846 Method 8270D
- Gasoline Range Organics (GRO) by USEPA SW-846 Method 8015D
- Diesel Range Organics (DRO) by USEPA SW-846 Method 8015D
- Total TAL Metals by USEPA SW-846 Methods 6010C and 7471B
- Percent Solids for Dry Weight Corrections by Method SM2540 B mod.

The data were evaluated for conformance to method specifications and qualifiers were applied using the USEPA Region II SOPs and the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, EPA 540/R-99-008, May 1999 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, USEPA-540-R-10-011, January 2010, with additional reference to *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, EPA-540-R-04-004, October 2004, as they applied to the analytical methods employed. Field duplicate RPD review and applicable control limits were taken from the USEPA *Region I, New England Data Validation Functional Guidelines for Evaluating Environmental Analyses*, December 1996.

The samples were processed and the results were reported under two sample delivery groups (SDGs) 460-94062-1 and 460-94148-1. Table 1 provides a sample submittal list with the field IDs cross-referenced with the TestAmerica-Edison IDs.

Table 1 - Sample Submittals - National Grid / Equity Soil Samples

Field ID	Laboratory ID	Matrix	Date/Time Sampled

SB-46 (40-43)	460-94148-7	Soil	05/01/2015 14:54

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, matrix spike/matrix spike duplicates (MS/MSD), surrogate recoveries, laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

Inorganic data quality was evaluated by reviewing the following parameters: holding times, matrix spikes, initial calibrations, continuing calibration verification standard recoveries, contract required detection limit standard recoveries, laboratory control samples, ICP interference check sample recoveries, ICP serial dilution results, field and laboratory duplicates, laboratory blanks, and analyte quantitation.

Acetone contamination was evident and caused the negation of several positive results. One non-detect volatile result (1,4-dioxane) was rejected because of poor instrument sensitivity. One non-detect semivolatile result (2,4-dinitrophenol) was rejected because of matrix spike recoveries being less than 10%, indicating severe matrix effects. All other data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the compounds and analytes in the media tested (i.e., soil) with the qualifications described below. Completeness of 99.87% was achieved for this data set. This is within the goal of 90-100% and is acceptable.

A glossary of data qualifier definitions is included in Appendix A of this report. The data qualifier summaries are attached as Appendix B of this report.

Each noncompliance with specific data usability criteria that required data qualification is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

460-94062-1

Blank Contamination (pp.741-743, 747-749, 753-755, 759-761, 765-767): Acetone and methylene chloride were detected in several of the method preservation and laboratory method blanks at concentrations less than twice the reporting limits. The associated sample results were qualified using the criteria summarized in the table below.

For common lab contaminants (methylene chloride, acetone, 2-butanone):			
Blank type	**Blank result**	**Sample result**	**Action for samples**
Method, Storage, Trip, or Field	Detects	Not detected	No qualification
	≤ 2x RL	< 2x RL	Report sample RL value with a U if <RL. Report sample result with a U if >RL.
		≥ 2x the RL	No qualifications

RL: Reporting limit.

The acetone results for samples DUP-01 and SB-46 (45-50) were less than two times the blank level and were qualified "U," as undetected, because of laboratory contamination. All other acetone results were non-detect or greater than two times the reporting limit and did not require qualification. Methylene chloride was not detected in any of the field samples.

Internal Standard Area Counts (p. 249): The internal standard 1,4-dioxane-d8 recovery for sample SB-46 (40-43) was less than the lower method specification limit of 50%, at 45.9%. The 1,4-dioxane result for SB-46 (40-43) was non-detect and was qualified "R," as rejected, because of poor instrument sensitivity.

Calibrations (pp.683-686, 692-695, 701-704): The continuing calibration verification (CCV) percent drift and difference for acetone and vinyl chloride were greater than the upper method limit of 20% on 05/04/15 at 05:46 on instrument CVOAMS2. The acetone and vinyl chloride results for associated sample SB-45 (18-20) were non-detect and did not require qualification in response to the high instrument bias.

The CCV percent differences/drifts for acetone and methyl acetate were less than the lower method limit of -20% on 05/05/15 at 22:24 on instrument CVOAMS9. The positive and non-detect acetone and methyl acetate results for associated samples SB-47 (10-14), SB-47 (45-50), DUP-01, SB-46 (11-15), SB-46 (45-50) and SB-46 (40-43) were qualified "J/UJ," as estimates, because of low instrument bias.

The CCV percent differences/drifts for cyclohexane, 1,1,1-trichloroethane, carbon tetrachloride, methylcyclohexane and isopropylbenzene were greater than the upper method limit of 20% on 05/05/15 at 22:24 on instrument CVOAMS9. The positive isopropylbenzene result for associated sample SB-46 (40-43) was qualified "J+," as an estimated concentration (LCS recovery also high), because of high instrument bias. All other cyclohexane, 1,1,1-trichloroethane, carbon tetrachloride, methylcyclohexane and isopropylbenzene results for associated samples SB-47 (10-14), SB-47 (45-50), DUP-01, SB-46 (11-15), SB-46 (45-50) and SB-46 (40-43) were non-detect and did not require qualification in response to the high instrument bias.

The CCV percent drift and difference for acetone and 2-butanone were greater than the upper method limit of 20% on 05/07/15 at 06:33 on instrument CVOAMS9. The acetone result for associated sample SB-47 (17-19) was qualified "J," as an estimated concentration because of high instrument bias. The 2-butanone result was non-detect and did not require qualification in response to the high instrument bias.

Laboratory Control Sample Recoveries and RPDs (pp. 263-264, 269-270): The LCS 460-296621/3 recovery for isopropylbenzene was greater than the upper quality control limit. The positive

isopropylbenzene results for associated samples SB-46 (40-43) were qualified “J+,” because of high method bias. All other associated isopropylbenzene results were non-detect and did not require qualification.

The LCSD 460-296185/4 recovery for chlorobromomethane was less than the lower quality control limit, but greater than 10%. The chlorobromomethane results for associated samples SB-45 (10-11), SB-45 (50-55) and SB-45 (45-48) were non-detect and were qualified “UJ,” as estimates because of low method bias.

Matrix Spike Recoveries and RPDs (pp. 273-276): Several SB-46 (11-15) MS and/or MSD target compound recoveries were less than the lower advisory limits, but greater than 10%. The associated positive and non-detect results for sample SB-46 (11-15) were non-detect and were qualified “J/UJ,” as estimates, because of low bias due to matrix effects and/or sample heterogeneity. The RPDs between the MS and MSD recoveries for acetone and methylcyclohexane were greater than the maximum advisory limit. The positive acetone and methylcyclohexane results were qualified “J,” as estimated concentrations, because of imprecision due to matrix effects and/or sample heterogeneity. Nonconforming RPDs associated with spike recoveries that were within the advisory limits or greater than the upper advisory limit and associated with a non-detect result did not elicit validation action.

Reporting Limits (Form 1s): Sample SB-45 (18-20) required analysis at an initial 500-fold dilution to bring the high level target compound concentrations into the calibration range. The initial dilution elevated the method detection limits and reporting limits. The surrogate recoveries were within the quality control limits. No data qualifications were required.

2.0 Semivolatile Organic Compounds

460-94062-1

Calibrations (pp. 869, 1373): The continuing calibration verification (CCV) percent difference for caprolactam was less than the lower method limit of -20% on 05/06/15 at 06:10 on instrument CBNAMS5. The caprolactam results for associated samples SB-45 (10-11), SB-45 (18-20), SB-45 (50-55) and SB-45 (45-48) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

Laboratory Control Sample Recoveries (pp. 851-852, 864): The LCS 460-296230/2-A and LCS 460-296230/3-A recoveries for atrazine and 2,4-dinitrotoluene were greater than the upper quality control limits. The atrazine and 2,4-dinitrotoluene results for associated samples SB-47 (10-14), SB-47 (17-19), SB-47 (45-50), DUP-01, SB-46 (45-50) and SB-46 (40-43) were non-detect. No data qualifications were required in response to the high method bias.

Matrix Spike Recoveries and RPDs (pp. 853-854, 857-858): The SB-46 (11-15) MS/MSD recoveries for 2,4-dinitrophenol were less than 10%. The 2,4-dinitrophenol result for sample SB-46 (11-15) was non-detect and was qualified "R," as rejected, because of significant low bias due to matrix effects.

The SB-46 (11-15) MS and/or MSD recoveries for 1,2,4,5-tetrachlorobenzene, 2,3,4,6-tetrachlorophenol, 2,4,5-trichlorophenol, 2,4,6-trichlorophenol, 2,4-dichlorophenol, 2-nitrophenol and hexachlorocyclopentadiene recoveries were less than the lower advisory limits, but greater than 10%. The associated results for sample SB-46 (11-15) were non-detect and were qualified "UJ," as estimates, because of low bias due to matrix effects.

The RPD between the SB-46 (11-15) MS and MSD recoveries for 4,6-dinitro-2-methylphenol was greater than the maximum advisory limit. The 4,6-dinitro-2-methylphenol result for sample SB-46 (11-15) was non-detect and the spike recoveries were within the advisory limits. No data qualifications were required.

3.0 Petroleum Hydrocarbons

460-94062-1 Gasoline Range Organics

Dilutions/Surrogate Recoveries (p. 1500): Sample SB-45 (18-20) required analysis at an initial 1000-fold to bring the GRO concentration into the calibration range. The dilution was sufficiently high to dilute out the surrogates. The surrogates could not be used to assess method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in control. No data qualifications were required.

460-94062-1 Diesel Range Organics

Matrix Spike Recoveries (pp. 1661, 1663): The SB-46 (11-15) MS/MSD recoveries for DRO were less than the lower advisory limit, and less than 20%. The positive DRO result for sample SB-46 (11-15) was qualified "J-," as an estimated concentration, biased low because of matrix interference and/or sample heterogeneity.

Dilutions/Surrogate Recoveries (p. 1658): Samples SB-45 (18-20) and SB-47 (10-14) required analysis at an initial 20-fold or greater dilution to bring the DRO concentration into the calibration range and/or to minimize matrix interference. The dilutions were sufficiently high to dilute out the surrogates. The surrogates could not be used to assess method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in control. No data qualifications were required.

4.0 Total Metals

460-94062-1

Blank Contamination (p.1898): Lead was detected in the continuing calibration blank 460-297724/102 analyzed on 05/11/15 at 00:01. The lead concentration for associated sample SB-45(18-20) was greater than ten times the blank level and did not require qualification.

Matrix Spike Recoveries (p. 1925): The spike added to SB-46 (11-15) MS for aluminum, iron, manganese and mercury was less than 25% of the original sample concentrations. The matrix spike recoveries and RPDs could not be calculated. The SB-46 (11-15) post-digestion spike recoveries for aluminum, iron and manganese were within the acceptance limits of 80-120%. No post-digestion spike was prepared and analyzed for mercury. No data qualifications were required.

The SB-46 (11-15) MS recovery for antimony was less than the lower advisory limit of 75%, at 53%. The SB-46 (11-15) post-digestion spike recovery for antimony was within the acceptance limits of 80-120%. All samples were affected. All antimony results were non-detect and were qualified “UJ,” as estimates, because of low bias attributable to matrix effects and/or poor method accuracy.

The SB-46 (11-15) MS recoveries for chromium, lead and zinc were greater than the upper advisory limit of 125%, but less than 200%. The SB-46 (11-15) post-digestion spike recoveries for chromium, lead and zinc were within the acceptance limits of 80-120%. All samples were affected. The positive chromium, lead and zinc results were qualified “J,” as estimated concentrations, because of high bias attributable to matrix effects and/or poor method accuracy.

5.0 Field Duplicate Precision

A field duplicate sample was collected for sample SB-47 (45-50). The calculated RPDs are listed in Table 2 below. Field duplicate results were evaluated using the following criteria.

Organics: The RPD must be ≤ 50% for soil/sediments for results greater than or equal to two times the reporting limit. If one of the results is non-detect or less than two times the reporting limit, and the duplicate is greater than two times the reporting limit, the difference between the parent and field duplicate results must be less than or equal to two times the reporting limit.

Action applies only to the affected analyte in the organic duplicate sample pair.

Inorganics: The RPD must be ≤ 50% for soil/sediments for results greater than or equal to five times the reporting limit. For results less than five times the reporting limit, the difference between the parent and field duplicate results must be less than or equal to four times the reporting limit.

Action applies to the affected analyte in all inorganic samples of the same matrix prepared and analyzed by the same method.

Field sampling/laboratory precision and sample homogeneity were acceptable. No data qualifications were required.

Table 2 - Field Duplicate Precision - National Grid / Equity Soil Samples

Compound	SB47(45-50)	DUP-01	Units	RPD (%)	Quals
Acetone	15	10	µg/kg	40	
Benzene	0.39 J	0.50 J	µg/kg	25	
bis(2-Ethylhexyl)phthalate	70 J	430 U	µg/kg	NC	±4RL
Diesel Range Organics (C10-C44)	50	34	mg/kg	38	
Aluminum	12100	15300	mg/kg	23	
Arsenic	4.4	4.9	mg/kg	11	
Barium	98.8	114	mg/kg	14	
Beryllium	0.42 J	0.51	mg/kg	19	
Calcium	11600	12400	mg/kg	6.7	
Chromium	32.6	40.6	mg/kg	22	
Cobalt	11.3 J	14.0	mg/kg	21	
Copper	25.4	32.0	mg/kg	23	
Iron	25700	31800	mg/kg	21	
Lead	7.9	10.3	mg/kg	26	
Magnesium	10800	12900	mg/kg	18	
Manganese	492	607	mg/kg	21	
Nickel	29.7	37.6	mg/kg	23	

Table 2 (Continued) - Field Duplicate Precision - National Grid / Equity Soil Samples

Compound	SB47(45-50)	DUP-01	Units	RPD (%)	Quals
Potassium	4040	5190	mg/kg	25	
Sodium	1530	2020	mg/kg	28	
Vanadium	37.9	47.0	mg/kg	21	
Zinc	63.6	78.2	mg/kg	21	
Solids	78.4	77.4	%	1.3	

RPD: Relative percent difference
QUALs: Qualifications
µg/kg: micrograms per kilogram (ppb)
mg/kg: milligrams per kilogram (ppm)
%: Percent

6.0 Notes

Percent Solids (p. 5413): All soil sample results were reported on a dry weight basis. The percent solids result for sample SB-47 (10-14) was less than 50%, at 36.5%. This percent solids measurement is also close to the Region II SOP limit of 30%. Based on professional judgment, all SB-47 (10-14) positive and non-detect results were qualified "J/UJ," as estimates, because of the high dry weight correction.

Data Reporting: The calibration and instrument printout raw data for the 05/06/15 mercury analytical run were omitted from the original data package. This information was requested and was received on 06/22/15. The omitted pages are included in Appendix C.

Positive results less than the reporting limit, but greater than the method detection limit (MDL) were qualified "J," as estimated concentrations, due to increased uncertainty near the detection limit.

Matrix spike and matrix spike duplicates, laboratory duplicates, and ICP serial dilutions that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

Tentatively identified compound (TIC) results that have been reviewed and approved by the laboratory analyst were qualified "NJ," as presumptively present at an estimated concentration. Non-target compounds with a general tentative identification or labeled as "unknown" were qualified "J," as an estimated concentration.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but may be biased high.

J- The result is an estimated quantity, but may be biased low.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

TALS Sample Number	Ammonia (pH<2)	COD (pH<2)	Nitrate Nitrite (pH<2)	Metals* (pH<2)	Hardness (pH<2)	Pest (pH 5-9)	EPH or QAM (pH<2)	Phenols (pH<2)	Sulfide (pH>9)	TKN (pH<2)	TOC (pH<2)	Total Cyanide (pH>12)	Total Phos (pH<2)	Other	Other

If pH adjustments are required record the information below:

Sample No(s). adjusted: _____

Preservative Name/Conc.: _____ Volume of Preservative used (ml): _____

Lot # of Preservative(s): _____ Expiration Date: _____

The appropriate Project Manager and Department Manager should be notified about the samples which were pH adjusted.

** Samples for Metal analysis which are out of compliance must be acidified at least 24 hours prior to analysis.*

CASE NARRATIVE

Client: AECOM, Inc.

Project: Equity / National Grid

Report Number: 460-94062-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 4/30/2015 4:10 PM and 5/1/2015 5:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 3.2° C and 3.2° C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Acetone was detected in method blank MB 460-296185/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Acetone was detected in method blank MB 460-296621/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Acetone was detected in method blank MB 460-296939/6 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Isopropylbenzene failed the recovery criteria high for LCS 460-296621/3. Chlorobromomethane failed the recovery criteria low for LCSD 460-296185/4. Refer to the QC report for details.

VOLATILE ORGANICS

Samples SB-45 (10-11) (460-94062-1), SB-47 (10-14) (460-94148-1), SB-45 (18-20) (460-94062-2), SB-47 (17-19) (460-94148-2), SB-45 (50-55) (460-94062-3), SB-47 (45-50) (460-94148-3), SB-45 (45-48) (460-94062-4), DUP-01 (460-94148-4), SB-46 (11-15) (460-94148-5), SB-46 (45-50) (460-94148-6) and SB-46 (40-43) (460-94148-7) were analyzed for Volatile organics in accordance with EPA SW-846 Methods 8260C. The samples were prepared on 05/01/2015 and analyzed on 05/04/2015, 05/06/2015 and 05/07/2015.

Acetone was detected in method blank LB3 460-295776/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Methylene Chloride was detected in method blank LB3 460-295993/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Several analytes failed the recovery criteria low for the MS of sample SB-46 (11-15)MS (460-94148-5) in batch 460-296621. 4-Methyl-2-pentanone (MIBK) and Chloroethane failed the recovery criteria high.

The laboratory control sample (LCS) for batch 296621 recovered outside control limits for the following analyte: Isopropylbenzene. This analyte was biased high in the LCS. The associated sample data has been flagged and reported.

The laboratory control sample duplicate (LCSD) for batch 296185 recovered outside control limits for the following analyte: Chlorobromomethane. This analyte was not detected in the associated samples; therefore, the data have been reported.

For the MSD of sample SB-46 (11-15)MSD (460-94148-5) in batch 460-296621, Several analytes failed the recovery criteria low. 4-Methyl-2-pentanone (MIBK) and Chloroethane failed the recovery criteria high. Also, Several analytes exceeded the RPD limit.

The following samples were diluted to bring the concentration of target analyte(s) within the calibration range and due to the abundance of

non-target analytes: SB-45 (18-20) (460-94062-2). Elevated reporting limits (RLs) are provided.

The continuing calibration verification (CCV) associated with batch 296177 recovered above the upper control limit for Vinyl chloride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 296621 recovered outside control limit for Carbon tetrachloride, Isopropylbenzene (biased high), 1,1,1-Trichloroethane and Methyl acetate. A low level calibration standard (LLCCV) was analyzed at the RL and meets criteria. The samples associated with this CCV were non-detects for the affected analytes, except for Isopropylbenzene. The following samples are impacted: SB-46 (40-43) (460-94148-7) and (CCVIS 460-296621/2).

Internal standard (ISTD) response for 1,4-Dioxane-d8 the following sample was outside of acceptance limits (marginal exceedance): SB-46 (40-43) (460-94148-7). The associated target analyte, 1,4-Dioxane, was not detected. Re-analysis was not performed.

Refer to the QC report for details.

No other difficulties were encountered during the Volatile organics analysis.

All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS

Samples SB-45 (10-11) (460-94062-1), SB-47 (10-14) (460-94148-1), SB-45 (18-20) (460-94062-2), SB-47 (17-19) (460-94148-2), SB-45 (50-55) (460-94062-3), SB-47 (45-50) (460-94148-3), SB-45 (45-48) (460-94062-4), DUP-01 (460-94148-4), SB-46 (11-15) (460-94148-5), SB-46 (45-50) (460-94148-6) and SB-46 (40-43) (460-94148-7) were analyzed for Gasoline Range Organics in accordance with EPA SW-846 Method 8015D - GRO. The samples were prepared on 04/30/2015 and 05/01/2015 and analyzed on 05/01/2015, 05/02/2015, 05/03/2015 and 05/04/2015.

a,a,a-Trifluorotoluene failed the surrogate recovery criteria low for SB-45 (18-20) (460-94062-2).

The following samples were diluted due to the abundance of target analytes: SB-47 (10-14) (460-94148-1), SB-45 (18-20) (460-94062-2), SB-45 (18-20) (460-94062-2).

The following samples were diluted to bring the concentration of target analytes within the calibration range: SB-46 (11-15) (460-94148-5), SB-46 (11-15) (460-94148-5[MS]) and SB-46 (11-15) (460-94148-5[MSD]). Elevated reporting limits (RLs) are provided.

Refer to the QC report for details.

No other difficulties were encountered during the GRO analysis.

All other quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANIC

Samples SB-45 (10-11) (460-94062-1), SB-47 (10-14) (460-94148-1), SB-45 (18-20) (460-94062-2), SB-47 (17-19) (460-94148-2), SB-45 (50-55) (460-94062-3), SB-47 (45-50) (460-94148-3), SB-45 (45-48) (460-94062-4), DUP-01 (460-94148-4), SB-46 (11-15) (460-94148-5), SB-46 (45-50) (460-94148-6) and SB-46 (40-43) (460-94148-7) were analyzed for Diesel range organic in accordance with EPA SW-846 Method 8015D_DRO. The samples were prepared on 05/01/2015 and 05/04/2015 and analyzed on 05/04/2015, 05/05/2015 and 05/06/2015.

o-Terphenyl failed the surrogate recovery criteria low for SB-45 (18-20) (460-94062-2). o-Terphenyl failed the surrogate recovery criteria low for SB-47 (10-14) (460-94148-1). Refer to the QC report for details.

#2 Diesel Fuel failed the recovery criteria low for the MS of sample SB-46 (11-15)MS (460-94148-5) in batch 460-296396.

#2 Diesel Fuel failed the recovery criteria low for the MSD of sample SB-46 (11-15)MSD (460-94148-5) in batch 460-296396.

Refer to the QC report for details.

Samples SB-47 (10-14) (460-94062-1)[50X], SB-45 (18-20) (460-94062-2)[20X] and SB-46 (11-15) (460-94062-5)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the DRO analysis.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS

Samples SB-45 (10-11) (460-94062-1), SB-47 (10-14) (460-94148-1), SB-45 (18-20) (460-94062-2), SB-47 (17-19) (460-94148-2), SB-45 (50-55) (460-94062-3), SB-47 (45-50) (460-94148-3), SB-45 (45-48) (460-94062-4), DUP-01 (460-94148-4), SB-46 (11-15) (460-94148-5), SB-46 (45-50) (460-94148-6) and SB-46 (40-43) (460-94148-7) were analyzed for Semivolatile organic compounds in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/03/2015 and 05/04/2015 and analyzed on 05/05/2015 and 05/06/2015.

The laboratory control sample (LCS) for batch 296230 recovered outside control limits for the following analyte: Atrazine. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 296230 recovered outside control limits for the following analyte: 2,4-Dinitrotoluene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The following laboratory control sample (LCS) associated with batch 296230 contained one acid/base surrogate outside acceptance limits:(LCS 460-296230/2-A). The laboratory's SOP allows one acid and/or one base surrogate to be outside acceptance limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Several analytes failed the recovery criteria low for the MS of sample 460-93917-7 in batch 460-296986.

For the MSD of sample 460-93917-7 in batch 460-296986, Several analytes failed the recovery criteria low. Di-n-octyl phthalate failed the recovery criteria high. Also, Several analytes exceeded the RPD limit.

Several analytes failed the recovery criteria low for the MS of sample SB-46 (11-15)MS (460-94148-5) in batch 460-296669.

1,2,4,5-Tetrachlorobenzene, 2,3,4,6-Tetrachlorophenol, 2,4-Dinitrophenol and Hexachlorocyclopentadiene failed the recovery criteria low for the MSD of sample SB-46 (11-15)MSD (460-94148-5) in batch 460-296669. 4,6-Dinitro-2-methylphenol exceeded the RPD limit.

Refer to the QC report for details.

Sample SB-47 (10-14) (460-94062-1)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the semivolatiles analysis.

All other quality control parameters were within the acceptance limits.

METALS

Samples SB-45 (10-11) (460-94062-1), SB-47 (10-14) (460-94148-1), SB-45 (18-20) (460-94062-2), SB-47 (17-19) (460-94148-2), SB-45 (50-55) (460-94062-3), SB-47 (45-50) (460-94148-3), SB-45 (45-48) (460-94062-4), DUP-01 (460-94148-4), SB-46 (11-15) (460-94148-5), SB-46 (45-50) (460-94148-6) and SB-46 (40-43) (460-94148-7) were analyzed for Metals in accordance with EPA SW-846 6010C. The samples were prepared on 05/05/2015 and 05/06/2015 and analyzed on 05/05/2015, 05/06/2015, 05/07/2015 and 05/11/2015.

Aluminum, Chromium, Iron and Potassium failed the recovery criteria high for the MS of sample 460-93917-1 in batch 460-297573.

Antimony, Calcium and Manganese failed the recovery criteria low for the MS of sample 460-94021-1 in batch 460-296833. Aluminum and Iron failed the recovery criteria high.

Antimony, Iron and Manganese failed the recovery criteria low for the MS of sample SB-46 (11-15)MS (460-94148-5) in batch 460-296833. Aluminum, Chromium, Lead and Zinc failed the recovery criteria high.

The following samples was diluted due to the nature of the sample matrix (high Internal Std recovery-Yttrium): (460-94021-A-1-B), (460-94021-A-1-C DU), (460-94021-A-1-D MS), (460-94021-A-1-B PDS) and (460-94021-A-1-B SD). Elevated reporting limits (RLs) are provided.

Method(s) 6010C: The following sample was diluted due to the nature of the sample matrix (high: Lead, Manganese, Zinc): SB-45 (18-20) (460-94062-2). Elevated reporting limits (RLs) are provided.

Refer to the QC report for details.

No other difficulties were encountered during the Metals analysis.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples SB-45 (10-11) (460-94062-1), SB-47 (10-14) (460-94148-1), SB-45 (18-20) (460-94062-2), SB-47 (17-19) (460-94148-2), SB-45 (50-55) (460-94062-3), SB-47 (45-50) (460-94148-3), SB-45 (45-48) (460-94062-4), DUP-01 (460-94148-4), SB-46 (11-15) (460-94148-5), SB-46 (45-50) (460-94148-6) and SB-46 (40-43) (460-94148-7) were analyzed for total mercury in accordance with EPA SW-846 Method 7471B. The samples were prepared and analyzed on 05/04/2015, 05/05/2015 and 05/06/2015.

Mercury failed the recovery criteria low for the MS of sample SB-46 (11-15)MS (460-94148-5) in batch 460-296758.

Refer to the QC report for details.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Refer to the QC report for details.

No other difficulties were encountered during the Hg analysis.

All other quality control parameters were within the acceptance limits.

PERCENT SOLIDS/PERCENT MOISTURE

Samples SB-45 (10-11) (460-94062-1), SB-47 (10-14) (460-94148-1), SB-45 (18-20) (460-94062-2), SB-47 (17-19) (460-94148-2), SB-45 (50-55) (460-94062-3), SB-47 (45-50) (460-94148-3), SB-45 (45-48) (460-94062-4), DUP-01 (460-94148-4), SB-46 (11-15) (460-94148-5), SB-46 (45-50) (460-94148-6) and SB-46 (40-43) (460-94148-7) were analyzed for percent solids/percent moisture in accordance with EPA Method CLPISM01.2 (Exhibit D) Modified. The samples were analyzed on 05/01/2015 and 05/02/2015.

No difficulties were encountered during the %solids/moisture analysis.

All quality control parameters were within the acceptance limits.

Executive Summary

Data validation was performed by Gregory A. Malzone of AECOM - Pittsburgh on one data report for the air and soil vapor samples collected at the Equity Former MGP Site in Brooklyn, NY. The samples were analyzed by TestAmerica Laboratories, Inc., 5815 Middlebrook Pike, Knoxville, TN, 37921 for volatile organic compounds using USEPA Compendium Method TO-15 and helium using ASTM Method D-1946.

The following samples were collected on March 25, 2015 and arrived at TestAmerica-Knoxville on March 31, 2015. The samples were assigned to TestAmerica-Knoxville sample delivery group (SDG) No. 140-2962-1.

Table 1
Sample Submittals – 2015 Equity SVI

Field ID	H2M ID	Matrix	Date Sampled	Canister ID
SG-A	140-2962-1	Soil Gas	3/25/2015	10267
IA-A	140-2962-2	Indoor Air	3/25/2015	11159
SG-B	140-2962-3	Soil Gas	3/25/2015	10261
IA-B	140-2962-4	Indoor Air	3/25/2015	10370
AIR-DUP-032515	140-2962-5	Indoor Air (QC)	3/25/2015	10683
OA-1-032515	140-2962-6	Ambient Air	3/25/2015	10026
SG-C	140-2962-7	Soil Gas	3/25/2015	10626
IA-C	140-2962-8	Indoor Air	3/25/2015	10390

The data were evaluated for conformance to method specifications and qualifiers were applied using the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, EPA 540/R-99-008, May 1999, as they apply to the analytical methods employed.

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, matrix spike/matrix spike duplicate (MS/MSD), laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

The data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the analytes in the media tested (i.e., air and soil vapor) with some qualifications. No data points were rejected. Completeness of 100% was achieved for this data set. This is within the goal of 90-100% and is acceptable. The data qualifier summaries are attached as Appendix B of this report. A glossary of data qualifier definitions is included in Appendix A of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

140-2962-1

Blank Contamination (pp. 577-582, 586-591, 595-600): Methylene chloride was detected in method blanks MB140-2577/5 (04/01/15), MB 140-2593/5 (04/02/15) and MB 140-2608/4 (04/03/15) at concentrations less than the reporting limits. All samples were affected. Methylene chloride is a common laboratory solvent/contaminant. The positive methylene chloride results for samples SG-A, IA-A, SG-B, IA-B and AIR-DUP-032515 were less than four times the reporting and were qualified "U," as undetected at the reported concentration, because of laboratory contamination.

Methylene chloride was detected in method blanks MB140-2577/5 (04/01/15), MB 140-2593/5 (04/02/15) and MB 140-2608/4 (04/03/15) at concentrations less than the reporting limits. All samples were affected. Methylene chloride is a common laboratory solvent/contaminant. The positive methylene chloride results for samples OA-1-032515, SG-C and IA-C were less or equal to the the reporting and were qualified "U," as undetected at the reporting limit, because of laboratory contamination.

Calibrations (pp. 460, 540-542, 554-556): The 02/02/15 initial calibration relative standard deviation m&p-xylene was greater than the method specification limit of 30% on instrument MJ. All samples were affected. The positive m&p-xylene results for samples SG-A, IA-A, SG-B, IA-B, AIR-DUP-032515, OA-1-032515, SG-C and IA-C were qualified "J," as estimated concentrations, because of nonlinear calibration nonconformance.

The continuing calibration verification percent differences for carbon tetrachloride and 2-methylnaphthalene were less than the lower validation limit of -30% on 04/01/15 at 09:24 on instrument MJ. The positive and non-detect carbon tetrachloride and 2-methylnaphthalene results for associated samples SG-A, SG-B, IA-B, AIR-DUP-032515, OA-1-032515, SG-C and IA-C were qualified "J/UJ," as estimates, because of low instrument bias. Indene had a high instrument bias and was associated with non-detect results only. No data qualifications were required for indene.

Laboratory Control Sample Recovery (pp. 79-80): The LCS (LCS 140-2577/1002) recoveries for carbon tetrachloride and 2-methylnaphthalene were less than the lower validation limit of 70%, but greater than 50%. The positive and non-detect carbon tetrachloride and 2-methylnaphthalene results for associated samples SG-A, SG-B, IA-B, AIR-DUP-032515, OA-1-032515, SG-C and IA-C were qualified "J/UJ," as estimates, because of low instrument bias. Indene had a high recovery and was associated with non-detect results only. No data qualifications were required for indene.

Residual Vacuum Checks (p. 774): The residual vacuum measurement for sample SG-A was greater than 10" Hg, at 14.5" Hg upon receipt at TestAmerica-Knoxville. The flow rate was slow and less than five L of sample was collected. TestAmerica-Knoxville used a higher sample volume for analysis in order to achieve the project reporting limits. No data qualifications were required.

Dilutions (Form Is): Sample SG-A required analysis at a secondary dilution to bring the ethanol and acetone concentrations into the calibration range. Sample IA-C required analysis at a secondary dilution to bring the propene concentration into the calibration range. The 4-bromofluorobenzene surrogate recoveries were within the quality control limits for the dilution analyses. The dilution results were reported. No data qualifications were required.

Matrix Interference (p. 5): TestAmerica-Knoxville indicated in the case narrative that there was a significant contribution from an interfering non-target compound to the quantitation of propene in all samples. Therefore, the propene results are biased high and should be considered estimates. The propene results for all samples were positive and were qualified "J+," as estimated concentrations, biased high because of matrix interference. Note: The propene result qualifiers for IA-B and AIR-DUP-032515 were changed from "J+" to "J" because of field duplicate imprecision (see item 3.0 below). The "J" qualifier takes precedence over the "J+" qualifier in the hierarchy of qualification.

2.0 Helium

140-2962-1

No data quality issues were noted. No data qualifications were required.

3.0 Field Duplicate Precision

A field duplicate sample was collected for sample IA-B. The results for the parent and field duplicate samples were non-detects, with exception to those listed in Table 2 below. The advisory limit for RPD is 25% for air/soil gas, or the difference between the primary and field duplicate results must be less than or equal to the reporting limit for results less than five times the reporting limit.

The primary and field duplicate results for acetone and propene required qualification (i.e., "J") as estimated concentrations, because of field sampling and/or laboratory imprecision and/or sample heterogeneity. See Table 2 below for details.

Table 2
Field Duplicate Precision – 2015 Equity SVI

Parameter	IA-B		AIR-DUP-032515		RPD (%)
Freon 113	0.54 J	µg/m3	0.49 J	µg/m3	10
1,2,4-Trimethylbenzene	1.5	µg/m3	1.3	µg/m3	14
1,2-Dichloroethane	0.62 J	µg/m3	0.54 J	µg/m3	14
1,3,5-Trimethylbenzene	0.39 J	µg/m3	0.34 J	µg/m3	14

2-Butanone	3.4	µg/m3	5.8	µg/m3	52*
2-Hexanone	2.0 U	µg/m3	0.47 J	µg/m3	NC*
2-Methylpentane	2.1	µg/m3	2.0	µg/m3	5
2-Propanol	5.8	µg/m3	6.4	µg/m3	10
4-Ethyltoluene	0.48 J	µg/m3	0.58 J	µg/m3	19
4-Methyl-2-pentanone	0.85 J	µg/m3	0.95 J	µg/m3	11
Acetone	**16**	**µg/m3**	**35**	**µg/m3**	**75**
Benzene	1.8	µg/m3	1.6	µg/m3	12
Carbon tetrachloride	0.52 J	µg/m3	0.52 J	µg/m3	0
Chloroform	0.22 J	µg/m3	0.19 J	µg/m3	15
Chloromethane	1.4	µg/m3	1.2	µg/m3	15
Cyclohexane	0.77 J	µg/m3	0.76 J	µg/m3	1.3
Dichlorodifluoromethane	2.4	µg/m3	2.4	µg/m3	0
Ethanol	130	µg/m3	120	µg/m3	8.0
Ethylbenzene	5.1	µg/m3	4.2	µg/m3	19
Heptane	1.2 J	µg/m3	1.1 J	µg/m3	8.7
Hexane	1.9	µg/m3	1.8	µg/m3	5.4
Isopentane	98	µg/m3	87	µg/m3	12
m&p-Xylenes	9.8	µg/m3	8.1	µg/m3	19
o-Xylene	3.6	µg/m3	3.1	µg/m3	15
Propene	**2.7**	**µg/m3**	**3.7**	**µg/m3**	**31**

Table 2 (Continued)
Field Duplicate Precision – 2015 Equity SVI

Parameter	IA-B		AIR-DUP-032515		RPD (%)
Styrene	5.3	µg/m3	4.6	µg/m3	14
Tetrachloroethene	1.1 J	µg/m3	0.78 J	µg/m3	34*
Tetrahydrofuran	0.31 J	µg/m3	2.9 U	µg/m3	NC*
Toluene	35	µg/m3	28	µg/m3	22
Trichloroethene	0.48 J	µg/m3	0.45 J	µg/m3	6.5
Trichlorofluoromethane	1.3	µg/m3	1.2	µg/m3	8.0

RPD: Relative percent difference

NC: RPD could not be calculated

*: The difference between the parent and field duplicate results was less than the reporting limit for results less than five times the reporting limit. Variation of this magnitude is acceptable.

4.0 Notes

Positive results less than the reporting limit (i.e., practical quantitation limit or PQL), but greater than the method detection limit (MDL) were qualified "J," as estimated concentrations, due to increased uncertainty near the detection limit. These data qualifications were retained in this data validation.

TestAmerica-Knoxville indicated that a method detection limit study has not been performed for the non-routine target compounds listed below. The detection of the analytes is demonstrated by detection of the calibration standard at the reporting limit. No estimated results were reported that were less than the reporting limits for these compounds.

2,3-Dimethylpentane
Ethanol
Indane
Indene
1-Methylnaphthalene
2-Methylnaphthalene
1,2,4,5-Tetramethylbenzene
Thiophene
1,2,3-Trimethylbenzene
2-Methylpentane

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but may be biased high.

J- The result is an estimated quantity, but may be biased low.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	N/A	
Cooler Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	N/A	This is checked in the lab.
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	N/A	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	N/A	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	

Job Narrative

Comments
No additional comments.

Receipt
The samples were received on 3/31/2015 11:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice.

Air - GC/MS VOA
Quantitation for the following analytes was previously based on a one-point calibration standard at the reporting limit.

2,3-Dimethylpentane
Ethanol
indane
Indene
1-Methylnaphthalene
2-Methylnaphthalene
1,2,4,5-Tetramethylbenzene
Thiophene
1,2,3-Trimethyl benzene
2-Methylpentane

These compounds were quantitated based on a minimum 5-point calibration curve. The following interim criteria are being used until the method performance for these additional analytes is fully established:

• The initial calibration acceptance criteria is set at 40% RSD. Any compound greater than 40% RSD was changed to a linear or quadratic model with an r2 ≥ 0.990 acceptance criteria.
• There are no criteria for second source standard verification % D. The second source standard was independently prepared from the same parent mixture (as the primary source).
• The continuing calibration verification criteria are set at 50% D. Any compound greater than 50% D must pass the LCS criteria.
• The LCS recovery criteria are set at 20% to 180%.
• A method detection limit study has not been performed. The detection of the analytes is demonstrated by detection of the calibration standard at the reporting limit. No estimated results are reported below the reporting limit.

Method(s) TO 14A, TO 15 LL, TO-14A, TO-15: EPA methods TO-14A and TO-15 specify the use of humidified "zero air" as the blank reagent for canister cleaning, instrument calibration and sample analysis. Ultra-high purity humidified nitrogen from a cryogenic reservoir is used in place of "zero air" by TestAmerica Knoxville.

Method(s) TO 15 LL, TO-15: The continuing calibration verification (CCV) associated with batch 2577 exhibited % difference of > 30% for the following analyte(s) carbon tetrachloride, however the results were within the LCS acceptance limits. The EPA method requires that all target analytes in the continuing calibration verification standard be within 30% difference from the initial calibration. According to the laboratory standard operating procedure, the continuing calibration is acceptable if it meets the laboratory control sample acceptance criteria. Carbon tetrachloride recovered outside control limits for the CCV and LCS. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method(s) TO-15: There is a significant contribution from an interfering non-target analyte to the quantitation of propene in all samples. Therefore, the propene results are biased high and should be considered estimated. The result is flagged with "cn".

Method(s) TO 15 LL, TO-15: Can Certification Comments:
Due to the large number of analytes in the CCV, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for several analytes to recover outside criteria for this method when analyzing for a full list. The CCV associated with the can cleaning batches had analytes outside control limits. These results have been reported and qualified.

Method(s) TO 15 LL, TO-14A, TO-15: This report includes canister certification data for the batch certified and/or individually certified canisters used to collect samples as well as for any canisters used for dilution of those samples. All of the canisters used for sample collection or sample dilution for this job were certified to be clean to the levels listed on the results page. Please note that results for individually certified canisters that were not used for sample collection or sample dilution may also be included in the report because these canisters were in the same cleaning batch as the canisters used for this project. Since these canisters were not used for this job, the results have no bearing on the sample results.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Air - GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Work Plan	Shallow Soil IRM Work Plan (National Grid, 2011)

1.0 Introduction

AECOM Technical Services Inc. (AECOM), on behalf of National Grid, is submitting this report summarizing and certifying the completion of construction activities for the Shallow Soil Interim Remedial Measure (IRM) conducted on the 254 Maspeth Avenue parcel of the former Equity Works Manufactured Gas Plant (MGP) site (site) located in Brooklyn, New York. The Shallow Soil IRM was completed in accordance with the New York State Department of Environmental Conservation (NYSDEC) approved IRM Work Plan (Work Plan) (National Grid, 2011) and pursuant to a Multi-site Order on Consent and administrative settlement with the NYSDEC, Index # A2-0552-0606.

The activities conducted as part of the Shallow Soil IRM followed the Work Plan submitted to the NYSDEC on December 16, 2011 and which was approved by the NYSDEC and New York State Department of Health (NYSDOH) on July 5, 2012. The Work Plan was developed to address readily recoverable contaminants in the shallow soil on 254 Maspeth Avenue property and was based on several site investigations including the Remedial Investigation (RI) and the Pre-Design Investigation (National Grid, 2011). The Work Plan was also developed to provide a clean corridor for the redevelopment construction activities proposed by the third-party property owner at the 254 Maspeth Avenue property.

The major construction activities for the Shallow Soil IRM were implemented over a one-month period beginning September 10, 2012 and ending September 28, 2012 and included the following:

- Removal and disposal of select surface and subsurface soils above the groundwater table for off-site thermal treatment.
- Removal of former MGP structures encountered within the excavation footprints.
- Placement of a demarcation fabric at the bottom of the excavations and placement of clean gravel backfill to 3 feet (ft) below ground surface (bgs).

A description of the site, statement of IRM objectives, and overview of this report are presented below.

1.1 Site Description

Figure 1-1 shows the location of the former Equity Works MGP site, which includes three modern properties (222 Maspeth Avenue, 252 Maspeth Avenue, and 254 Maspeth Avenue, as identified on Figure 1-2), and its surrounding on a United States Geological Survey (USGS) topographic map. The IRM described in this report was conducted on the 254 Maspeth Avenue portion of the site.

A pre-IRM site layout map depicting the 2012 facility layout on the 254 Maspeth Avenue property and the approximate location of the former Equity Works MGP structures is presented in Figure 1-2. The site was operated as an MGP site from approximately 1893 to 1929, first by the Equity Gas Light Company and later by the Brooklyn Union Gas Company (BUG). Gas manufacturing used the carbureted water gas (aka Lowes) process. BUG sold the Site in September 1951. Subsequently, the site was used for storage (pipe and valves) for the period of 1965 to 1981, and appears to have been vacant during the period of 1986 to 1988. The site appears to have been used as a solid waste transfer facility from 1990 under the ownership of various parties.

A RI is currently being conducted at the site by National Grid. Specifics of the RI scope of work are presented in the NYSDEC-approved RI Work Plan (AECOM, 2009) and subsequent work plan addendums. Based on information obtained during the RI on the 254 Maspeth Avenue property, five former MGP era structures (former generator house, former boiler house, former tar tank, former tar separator, and former gas oil storage house) were present on the 254 Maspeth Avenue property. The locations of these former structures are shown on Figure 1-2. Foundations of each of the five former structures were encountered during the RI.

The site currently houses a waste recycling facility and associated vehicle and equipment storage, with primary site activities occurring at the 222 Maspeth Avenue parcel, currently operated by Cooper Tank Recycling (Cooper Tank). The entire site is now owned by third parties as provided below:

- 222 Maspeth Avenue – This property is owned by 222 Maspeth Avenue, LLC and is currently used as an active waste recycling/waste transfer station. Currently one enclosed building housing offices and one open building (no walls, with roof) housing waste recycling operations are present on the lot. The business on the lot is operated by Cooper Tank.
- 252 Maspeth Avenue – This property is owned by Giacomo and Giovanna Bordone and is currently leased by Cooper Tank. The property is used as a maintenance center for equipment and a two story concrete building is present on the north side, along Maspeth Avenue. The business on the lot is operated by Cooper Tank.
- 254 Maspeth Avenue – This property is currently owned by 254 Maspeth Avenue, LLC and leased to Cooper Tank for occasional storage of empty roll-offs, parking of tractor-trailers, and Cooper Tank employee vehicle parking. Two rectangular concrete scales for measuring truck tare weight are located on the northern portion of the property. A storm water collection structure is located north of the truck scales. The business on the lot is operated by Cooper Tank.

The current operator of 254 Maspeth Avenue property, Cooper Tank, is in the process of amending a NYSDEC Part 360 Permit for operating a recycling facility. This permit, which will include expansion of the current 222 Maspeth Avenue facility into the 252 and 254 Maspeth Avenue properties, requires construction of a minimum 8-inch thick concrete pad across the entire surface of the site, a storm water collection system, and a 30-foot high wall along the perimeter of the 254 Maspeth Avenue property. These activities will be invasive and could encounter residual MGP waste observed during the ongoing RI activities. As a result, National Grid and the NYSDEC agreed that this Shallow Soil IRM was to be performed on the 254 Maspeth Avenue property prior to the redevelopment activities.

1.2 IRM Objectives

The objectives of the Shallow Soil IRM were to:

- Remove, to the extent possible, visual MGP-residual impacts observed in soils above the water table (or to a minimum depth of 5 ft bgs if the water table is shallower) on the 254 Maspeth Avenue property. The limits of excavation as detailed in the Work Plan are shown in Figure 1-3.
- Provide a safe working environment, with relation to the potential exposure to MGP-residual impacts, during the proposed redevelopment of the 254 Maspeth Avenue property (Figure 1-4).

Soils that were visually impacted with MGP-residuals were targeted for removal during the Shallow Soil IRM, as they were identified as sources that were readily recoverable and could potentially be exposed during the redevelopment of the 254 Maspeth Avenue property. Cooper Tank, responsible for the proposed

redevelopment of the 254 Maspeth Avenue property, had stated to National Grid that field activity during the proposed redevelopment would extend to a maximum depth of 5 ft bgs. Any remaining deeper MGP-residual impacts encountered during the excavation activities were to be identified with plastic sheeting to identify and mitigate exposure to the underlying material.

During the IRM, groundwater was observed at depths below 5 ft bgs at an approximate depth of 7 ft bgs. As such, soils within the limits of the Shallow Soil IRM were removed to an average depth of 7 ft bgs. Any remaining deeper MGP-residual impacts across the 254 Maspeth Avenue property are being addressed by demarcation at the bottom of the Shallow Soil IRM excavations, the product recovery IRM (separate from this soil removal IRM), and by current interim Site Management Plan for the site.

1.3 Report Overview

Section 2 presents the details of the IRM construction activities. Section 3 presents a summary of the construction activities and Section 4 contains references.

2.0 IRM Activities

EQ Northeast (EQ) was selected by National Grid to serve as the primary remediation contractor to complete the remedial construction work as detailed in the Work Plan (AECOM, 2011) and in accordance with the contract documents including specifications and design drawings. EQ was also responsible for the Health and Safety of its employees, subcontractors, suppliers, agents, inspectors, visitors, the general public, and any others associated with or interacting with EQ to provide labor, goods, or other services during the Shallow Soil IRM. AECOM served as the construction manager and engineer. AECOM's responsibilities included (1) monitoring compliance with the Work Plan and the Contract Documents, (2) documenting the construction activities and excavation quantities, and (3) performing perimeter air monitoring and vibration monitoring.

The Shallow Soil IRM was conducted from September 10, 2012 through September 28, 2012 by implementing the objectives of the Shallow Soil IRM, including removal and treatment/disposal of shallow soils above the groundwater table as discussed in Section 1.2 and shown in Figure 1-3. The main components of the IRM included:

- Mobilization and Work Area Preparation
  - Public Relations and Communication
  - Soil Profile
  - Work Area Preparation
  - Utility Survey
  - Decontamination Pad Installation
  - Background Monitoring
  - Security
- Environmental Controls
  - Community Air Monitoring Plan (CAMP)
  - Odor, Vapor, and Dust Control Plan
  - Vibration Monitoring Plan
  - Transportation Plan
  - Decontamination
- Excavation
  - Geotechnical Engineering Control
  - Materials Removal, Transportation, and Treatment/Disposal
  - Backfill and Compaction
- Restoration

- Surveying
- Demobilization

The remainder of this section describes these main components of the IRM. A photographic log documenting portions of the IRM is presented in Appendix A.

2.1 Mobilization and Work Area Preparation

An initial kick-off meeting was held on September 6, 2012 with representatives from National Grid, AECOM, and EQ. AECOM mobilized to 254 Maspeth Avenue property on September 6 to setup CAMP equipment and conduct background air monitoring, setup vibration monitoring equipment and conduct background vibration monitoring, and oversee the pre-construction structural survey of 254 Maspeth Avenue and adjacent properties. The pre-construction survey was performed by H2M Architects and Engineers of Long Island, New York.

EQ mobilized to the 254 Maspeth Avenue property on September 10, 2012 and initiated mobilization, work area management, and preparation. The preparation for remedial activities began immediately upon mobilization of equipment and personnel. Mobilization activities were completed on September 13, 2013 and work area preparation activities were completed on September 14, 2013, and included:

- Public relations and communications.
- Obtaining required permits, arranging for waste transportation, arranging for utility hook-ups (as needed), staging necessary equipment and personnel, preparing the Construction Health and Safety Plan (CHASP), and holding an on-site health and safety training session.
- Establishing parking areas, haul routes, and work zones for authorized personnel.
- Constructing the decontamination facility.
- Installation of erosion controls in accordance with local, state, and federal regulations. The erosion and sedimentation controls were maintained throughout the duration of the work.
- Work Area security including security personal, installation of temporary construction fence, and placement of fabric screen.
- Relocation and/or clearing of debris within work areas.
- Characterization and removal of unknown drums within work areas.
- Survey by a New York State-licensed surveyor for initial benchmarks and stakeout for the excavation limits.
- Installing perimeter air monitoring stations and notification system.
- Vibration monitoring setup and baseline monitoring.
- Level B Utility survey and protection.
- Construction of staging and containment areas and construction entrance.
- Traffic control and management.
- A NYSDEC-approved project sign was erected at the project entrance and remained in place during the Shallow Soil IRM.

2.1.1 Public Relations and Communication

Prior to mobilization, NYSDEC-approved Fact Sheets were distributed to property owners adjacent to the 254 Maspeth Avenue property. Additionally, National Grid representatives made contact with all neighbors, local NYSDEC officials, and other state and local government officials. National Grid established this communication plan to ensure all stake holders were aware of the proposed project and had a single point of contact for any questions and concerns that might have arisen during the work. The extensive communications plan was considered a success, as National Grid received no comments and/or complaints during the duration of the project.

2.1.2 Soil Profile

Prior to mobilization, soil profile data was collected from the area designated for excavation and provided to Clean Earth of Southeast Pennsylvania (CESP) and Bayshore Recycling Inc. (Bayshore Recycling) thermal treatment facilities for approval. Based on the soil profile data, Bayshore Recycling was able to approve a fast track schedule for accepting soils at their facility. This allowed the remediation contractor to:

- Aggressively plan remedial and construction activities prior to mobilization.
- Enhance excavation schedule by increasing haul truck frequency.
- Reduce onsite soil management activities.
- Improve site control due to minimal soil stockpiling on-site.
- Improve odor and vapor control due to efficient management of soils onsite.

2.1.3 Utility Survey

Prior to excavation, Dig Safely New York was contacted and companies with subsurface utilities at the 254 Maspeth Avenue were asked to mark-out their utilities in the areas of excavation. Copies of available New York City sewer and water maps from the 254 Maspeth Avenue property vicinity were also obtained and reviewed during underground utility clearance procedures. Additionally, historical mark-outs were reviewed and potential utility locations discussed with the property owner and with Cooper Tank. Following review of the utilities in the work area, a private company surveyed the excavation footprint for any potential utilities using geophysical methods. These protocols predicted that subsurface utilities were not present in the excavation areas, and utilities were not encountered during the excavation activities.

2.1.4 Decontamination Facility

A temporary, 12 ft x 48 ft equipment decontamination facility was constructed on the north portion of the work area and to the south of the Cooper Tank truck scales. The decontamination facility included placement of berms and 48-inch landfill liners with a slight slope to a corner sump. All trucks were dry decontaminated with the use of brushes and brooms prior to leaving the work area. Equipment used within the exclusion zones (excavation areas) was decontaminated using a pressure washer.

2.1.5 Background Monitoring

A background set of air and vibration monitoring data was established prior to excavation. A one-day set of volatile organic compounds (VOCs) and dust measurements were collected via photoionization detectors (PIDs) and DustTrak monitors respectively to establish background ambient air conditions. A three-day set of vibration measurements were collected to establish background vibration conditions.

2.1.6 Work Area Security

A temporary security trailer was installed near the entrance of the work area, and an off-hour security guard was present for the duration of the Shallow Soil IRM. Site personnel acted as site security during work hours. A temporary construction fence was installed south of the Cooper Tank truck scales and along the south boundary of the property to prevent unauthorized entry into the work area. A fabric screen was installed on the existing fence surrounding the property to help control dust, prevent horizontal migration of odors, and elevate the discharge point of emissions of vapors to facilitate dispersion, minimize their effect on downwind receptors, and limit visibility of the excavation.

2.2 Environmental Controls

Due to the immediate proximity of commercial businesses to the Shallow Soil IRM activities, management of odors, vapors, dust, noise, and vibration was an important component of this project. The NYSDEC-approved Community Environmental Response Plan (CERP) was developed to identify and address environmental impacts to the community resulting from the implementation of the Shallow Soil IRM. The CERP was approved by the NYSDEC in 2012 and included the plans listed in the following sub-sections.

2.2.1 Community Air Monitoring Plan

The Community Air Monitoring Plan [(CAMP), Appendix A of the CERP (AECOM, 2012)] was implemented during the Shallow Soil IRM activities. The purpose of the CAMP was to provide an early warning system to alert AECOM and National Grid that concentrations of total volatile organic compounds (TVOCs), respirable particulate matter (RPM_{10}) (*i.e.*, dust), or odors in ambient air were approaching alert levels or action levels due to Shallow Soil IRM activities. The early detection of emissions and associated contingency measures was intended to expedite any necessary mitigation measures and to reduce the potential for the community to be exposed to constituents at levels above accepted regulatory limits and recommended guidelines. Appendix B contains the perimeter air monitoring data, including the background data and real-time monitoring data (DustTrak and PID data).

As outlined in the CAMP, a four-tiered classification and warning system based on Action Levels was used to provide warning and mitigation procedures to prevent emissions during the Shallow Soil IRM. Action level concentrations for TVOCs and RPM_{10} were developed in accordance with the generic NYSDOH CAMP (NYSDEC, 2010). The four-tiered warning system was based on real-time contaminant concentrations averaged over a fifteen-minute period. Response actions were implemented when TVOC, particulates, or odors exceeded the alert levels or action levels.

Parameter	Alert Limit	Action Limit	Operational Level	Alert Level	Action Level	Shut Down
TVOC – ppmv	3.7	5.0	$[C] \leq 3.7$	$3.7 < [C_{avg}] \leq 5.0$	$5.0 < [C_{avg}] \leq 25$	$[C_{avg}] > 25$
Benzene- ppmv	0.8	1	$[C] \leq 0.8$	$0.8 < [C_{avg}] \leq 1.0$	$[C_{avg}] > 1$	
RPM_{10} - $\mu g/m^3$	100	150	$[C] \leq 100$	$100 < [C_{avg}] \leq 150$	$[C_{avg}] > 150$	

Real-time air monitoring for TVOCs and RPM_{10} was conducted continuously during periods of intrusive activity at upwind and downwind locations along the perimeter of work area. Upwind TVOC concentrations were measured at the start of each workday and periodically thereafter to establish background conditions. The locations of the instruments were changed during the day to adapt to changing wind directions.

Portable (battery operated) monitoring stations were used to collect the real-time data and included the following components: station case and tripod; total organic vapor analyzer; particulate monitor and data logger. The monitoring data was converted to 15-minute averages, and stored in data-loggers at each location. The averaged values were compared to the Alert/Action Levels. The units were equipped with an audible alarm to indicate exceedances of these levels.

There were no measurements of TVOCs and RPM_{10} above the alert or action level for a 15-minute period at the downwind monitoring station that were associated with intrusive activities during Shallow Soil IRM. The RPM_{10} recorded above the alert and/or action level at the upwind location (PMT-1) are likely due to off-site operations and not associated with the intrusive activities on the site as all downwind measurements were below the action level. The CAMP Report is included in Appendix B.

2.2.2 Odor, Vapor and Dust Control Plan

Odor, vapor, and dust control were required due to the immediate proximity of commercial business. A three-tiered set of controls were implemented during the Shallow Soil IRM as per the NYSDEC approved Odor Vapor and Dust Control Plan (Appendix B of CERP [AECOM, 2012]).

2.2.2.1 Level I

Level I controls were built into the design of the Shallow Soil IRM and included proactive measures to minimize the effect of fugitive emissions. These included:

- Placement of a visual barrier cloth on the property perimeter fencing. The resistance caused by the visual barrier elevated the discharge point of any emissions leaving the Work Area to the top of the perimeter fence and promoted better atmospheric mixing and dispersion of any emissions.
- Use of 10-mil polyethylene liners and tarps on trucks used to transport impacted material. All trucks used for off-site transport had liners and tarps in place to cover impacted material. On-site haul routes were routinely wetted to control dust.
- Covering all stockpiles of impacted material if left inactive for a period of more than 2 hours.

2.2.2.2 Level II

Level II controls included procedures that were implemented in response to specific increases in fugitive emissions, but were not likely to have a significant impact in the schedule of Shallow Soil IRM activities. The following Level II controls were implemented during the remedial action:

Suppressing Agents

Odor suppressant foam for VOC mitigation and water spray for dust suppression were applied over emissions sources for controlling emissions. Odor suppressant foam (Rusmar AC-600) was created by the injection of air into a foam concentrate/water mixture using a pneumatic foam unit. The foam was applied via a hose to cover excavations/stockpiles, and during the loading of trucks to a thickness of 3 to 6 inches to control VOC and odor emissions.

Spray of water was used to minimize the amount of dust created.

Tarps

Tarps provided effective control for source areas that were likely to be inactive for extended periods of time. Rolls of 6-mil polyethylene were used to cover inactive stockpiles. Tarps were also used for covering

exposed soils loaded into trucks. All trucks were lined with 10-mil polyethylene sheeting, the liners large enough to overlap and fully cover the top of the load. Additional automatic mesh tarps were used to secure the liners.

2.2.2.3 Level III

Level III controls included procedures that would have been initiated in response to specific increases in fugitive emissions that were likely to have a more significant impact on production schedule and Shallow Soil IRM activities. Level III controls are required when Level II controls had been exhausted and ambient concentrations of emissions continued to exceed the site-specific action levels. No Level III procedures were employed during the Shallow Soil IRM.

The excavation was performed with no odor and vapor complaints from the nearby businesses.

2.2.3 Vibration Monitoring Plan

The Vibration Monitoring Plan detailed in the CERP (AECOM, 2012) approved by the NYSDEC described the procedure to monitor potential vibration and settlement impacts resulting from the Shallow Soil IRM. The Vibration Monitoring Plan identified the receptors, the relevant damage criteria, monitoring equipment, the proposed monitoring locations, and the mitigation procedures for responding to observed exceedances of the vibration and settlement thresholds. Pre-construction vibration monitoring was conducted to establish a baseline.

Vibration monitors were installed along the northern wall of the warehouse building on 7 Rewe Street property as identified in the Vibration Monitoring Plan. An Instantel MiniMate Plus with mounted triaxial geophones was used for continuous vibration monitoring. The vibration monitor was setup with an event trigger corresponding to the site-specific Warning Action Limit (2 peak particle velocity (ppv)) and action levels (5 ppv). In cases when the limit was reached, the vibration monitor recorded, saved, and sent out the event report through an email message system to the monitoring staff and field engineer. After each event the monitoring staff and field engineer evaluated potential sources causing such an event and defined a mitigation measure if necessary.

No exceedance of structural damage warning threshold was recorded. A Vibration Monitoring Report is included in Appendix C.

2.2.4 Transportation Plan

The Transportation Plan (Appendix C of the CERP [AECOM, 2012]) approved by NYSDEC described the procedures and the specific offsite transportation routes that were followed to manage construction traffic during the Shallow Soil IRM in a manner that minimized disturbance to the community.

The Transportation Plan was strictly adhered to during the Shallow Soil IRM. All trucks used for hauling were permitted for waste transport in the State of New York. The trucks were loaded directly from excavations, or from an on-site stockpile area to ensure impacted material did not spread throughout the Work Area. The vehicles were loaded in such a way as to avoid contamination of their exteriors, including tires. Each truck was lined with 10-mil-thick polyethylene sheeting (as opposed to the 12-mil requirement in the Transportation Plan) prior to loading. A plastic liner was also wrapped over loaded soils to minimize odors during transport. No soils with free liquids were shipped from the Work Area. Odor-suppressing foam was applied to the material on the trucks. All trucks were covered with an automatic mesh tarp prior to leaving the Work Area to ensure that no material was blown off the truck during transportation and to minimize the release of odors. After loading, all trucks entered a decontamination pad where dry brushing

ensured that any residual soil was removed from the truck body, wheels, and tires and impacted soils did not track onto the streets.

Waste shipments were documented using the required waste manifests. All shipments of waste from the Site had documentation, describing the type and amount of material and the receiving facility. Each truck was dispatched from the Work Area with the appropriate bill-of-lading or manifest, and followed the prescribed transportation route to its destination.

2.2.5 Decontamination

During the excavation activities, decontamination of equipment was performed in order to prevent cross contamination as well as to prevent contaminated material from spreading off-site during waste hauling activities. Trucks used for transportation of excavated material were decontaminated using dry decontamination methods (*i.e.*, removal of loose material with a broom or brush). These methods, along with parking of trucks on plastic sheeting during loading, were effective at preventing the spread of contaminated materials onto roadways during transport to disposal facilities. Decontamination of the earth-moving equipment occurred at the completion of the excavation phase and prior to the handling of clean backfill. The method of equipment decontamination consisted of dry methods to remove any impacted soil.

2.3 Excavation

The excavation activities were the main remedial action conducted as part of the Shallow Soil IRM. Components of the successful excavation operation included geotechnical engineering control, material removal, transportation and treatment/disposal, and backfill and compaction. Figure 2-1 presents an as-built drawing of the completed excavation. Daily activity reports were maintained by the Site Engineer and EQ and are included in Appendix D. Each activity is discussed below.

2.3.1 Geotechnical Engineering Control

The 254 Maspeth Avenue property is bounded on the south by a one-story brick Warehouse building (7 Rewe Street), east by the Fed Ex property chain link fence, and to the west by the 252 Maspeth Avenue property perimeter concrete wall. As such, benching of the excavation areas were designed and implemented as an engineering control to prevent the risk of building collapse, foundation collapse, fence collapse, and/or personnel injury. Benching procedures involved excavation adjacent to the surface structures to the depth of the footer with deeper excavation completed at a 1:1 (horizontal to vertical) slope to the final excavation depth. The site engineer performed visual inspections at least twice per day, documenting the extent of the excavation at the time of inspection, and documenting any findings based on observation of the building and excavation. In addition, as detailed in Section 2.2.3, a vibration monitor was placed adjacent to the Warehouse building to ensure that the excavation did not result in any damage to the warehouse building structure. The vibration monitor was equipped with remote alarm system to alert the site engineer of any exceedance of vibration alert [2 peak particle velocity (ppv)] and action levels (5 ppv). No exceedance of the structural damage warning threshold was recorded.

2.3.2 Materials Removal, Transportation, and Treatment/Disposal

Materials removed during the Shallow Soil IRM include soil and fill material, domestic trash, unknown foundations, historic piping, and construction & demolition (C&D) debris. Former MGP structure walls and foundations are believed to have been encountered during excavation as evidenced by concrete and brick fragments but could not be conclusively determined. As described in the Work Plan, excavation was conducted in four discrete locations on the southern portion of the 254 Maspeth Avenue property. The four

excavations were designated as Area A, Area B, Area C, and Area D as shown in Figure 2-1, and a cross section of each excavation area is shown in Figure 2-2. Details of the excavation areas are provided below.

2.3.2.1 Area A

Fill material consisting of soil and C&D debris was removed to an approximate depth of 7 to 8 ft bgs in Area A. The lateral limits of excavation were extended eastward to remove visible MGP-residual impacted soil observed at approximately 5 ft bgs. Visible MGP-residual impacted soil was observed on the northern wall of the excavation at a depth of 4 to 6 ft bgs but could not be removed due to the presence of perimeter fence separating the 254 Maspeth Avenue property and the Fed Ex property. Brick and concrete fragments believed to have been the former Tar Separator were observed on the northern wall of the excavation.

Approximately 37.4 cubic yards (cy) (in-place volume) of fill material was removed from Area A. The fill material was stockpiled over 10-millimeter liner prior to off-site transportation. The fill material was transported via lined trucks to Bayshore Recycling for thermal treatment and disposal. An orange demarcation fabric was placed at the bottom of the excavation (7 to 8 ft bgs). The excavation was backfilled with clean stone backfill to approximately 3 ft bgs following placement of the demarcation fabric, because the site-improvement activities by Cooper Tank involved the excavation of the same areas, so backfill was not required from 0 to 3 ft bgs. Backfill was later provided by Cooper Tank upon completion of their wall foundation construction activities.

2.3.2.2 Area B

Fill material consisting of soil, boulders, and C&D debris was removed to an approximate depth of 5 ft bgs in Area B. The lateral limits of excavation were extended southward to remove visible MGP-residual impacted soil observed at approximately 5 ft bgs. The excavation was also vertically extended to a depth of 6 ft bgs on the southern portion of Area B to remove visible MGP-residual impacted soils. Excavation was laterally extended till no visual MGP-residual impacts were observed.

Approximately 20.4 cy (in-place volume) of fill material was removed from Area B. The fill material was stockpiled over a 10-mil liner prior to off-site transportation. The fill material was transported via lined trucks to Bayshore Recycling for thermal treatment and disposal. An orange demarcation fabric was placed at the bottom of the excavation (5 to 6 ft bgs). The excavation was backfilled with clean stone backfill to approximately 3 ft bgs following placement of the demarcation fabric. Backfill was later provided by Cooper Tank upon completion of their wall foundation construction activities.

2.3.2.3 Area C

Fill material consisting of soil, domestic trash, and C&D debris was removed to an approximate depth of 5 ft bgs in Area C. The lateral limits of excavation were extended approximately 8 to 10 ft to the south to remove visible MGP-residual impacted soil observed at approximately 4 to 6 ft bgs. The excavation was also vertically extended to a depth of 7 ft bgs on the northern, western, and southwestern portion of Area C to removed visible MGP-residual impacted soils. Visible MGP-residual impacted soil was also observed on the eastern wall of the excavation at a depth of 3 to 5 ft bgs but could not be removed due to the presence of perimeter fence separating the 254 Maspeth Avenue property and the Fed Ex property. Approximately 432 cy (in-place volume) of fill material was removed from Area C.

The fill material was stockpiled over a 10-mil liner prior to off-site transportation. The fill material was transported via lined trucks to Bayshore Recycling for thermal treatment and disposal. An orange demarcation fabric was placed at the bottom of the excavation (5 to 7 ft bgs). The excavation was backfilled

with clean stone backfill to approximately 3 to 4 ft bgs following placement of the demarcation fabric. Backfill was later provided by Cooper Tank upon completion of their wall foundation construction activities.

2.3.2.4 Area D

Fill material consisting of soil, domestic trash, and C&D debris was removed to an approximate depth of 5 to 7 ft bgs in Area D. The lateral limits of excavation were extended approximately 3 feet to the east to remove visible MGP-residual impacted soil observed at approximately 4 ft bgs. A portion of the excavation was also extended north to remove visible MGP-residual impacted soil. Visible rMGP-residual impacted soil was observed on the southern wall of the excavation at a depth of 3 to 5 ft bgs but could not be removed due to the proximity of the Warehouse building on the 7 Rewe Street property. Approximately 284.8 cy (in-place volume) of fill material was removed from Area C.

The fill material was stockpiled over 10-mil liner prior to off-site transportation. The fill material was transported via lined trucks to Bayshore Recycling for thermal treatment and disposal. An orange demarcation fabric was placed at the bottom of the excavation (5 to 7 ft bgs). The excavation was backfilled with clean stone backfill to ground surface following placement of the demarcation fabric.

2.3.2.5 Means and Methods for Materials Removal, Transportation, and Treatment/Disposal

Stockpiled soils were covered with 10-mil polyethylene sheeting during periods of anticipated precipitation to prevent run-off, erosion, and absorption of excessive moisture, which could affect the handling and thermal treatment properties of the soils. Stockpiled soils left more than two hours, including overnight periods, were covered with plastic sheeting and/or odor suppressing agents.

As detailed above, the implementation of the Shallow Soil IRM resulted in the removal of fill and non-hazardous MGP-residual impacted soils and C&D debris. Fill material consisting of soil, domestic trash, tires, piping, and plastic materials were removed from the excavation areas. Several surface and subsurface concrete/brick/steel walls and foundations, monitoring wells, historic piping, wood piles, metal debris, abandoned utility lines, and other miscellaneous structures had to be demolished and removed from the excavation areas. All C&D debris was broken up with an excavator bucket if needed, and shipped off-site for disposal with the non-hazardous, MGP-residual impacted soils.

A total of 68 loads with 1,671.35 tons of non-hazardous, MGP-residual impacted soils and non-hazardous construction debris were excavated and transported off-site for thermal treatment at Bayshore Recycling. Table 2-1 shows the daily summary of material removed during the Shallow Soil IRM. A detailed summary of the debris quantities and types is provided in Appendix E. Manifests from Bayshore Recycling are also provided in Appendix E. The Certificates of Recycling are presented in Appendix F.

2.3.3 Backfill and Compaction

Following excavation activities and documentation of the limits of excavation by the remediation contractor (EQ) and the site engineer, backfill of the excavation was conducted in accordance with the EQ's technical execution plan and included placement of clean 1 to 2.5-inch stone in 12-inch lift to a level of approximately 3 ft below the original grade except Area D. The stone backfill was placed to grade in Area D. Backfill was only placed to 3 ft below the original grade in Areas A, B, and C because the site-improvement activities by Cooper Tank involved the excavation of the same areas, so backfill was not required from 0 to 3 ft bgs.

The stone backfill material was brought to the 254 Maspeth Avenue property in tri-axle dump trucks from the Armored Inc. located in Newark, New Jersey. The borrow source backfill material was tested prior to delivery for metals, polycyclic aromatic hydrocarbons (PAHs), semivolatile organic compounds (SVOCs),

and VOCs, pesticides, polychlorinated biphenyls (PCBs), and herbicides. The laboratory analytical results are included in Appendix G. Table 2-2 summarizes chemical analytical results for backfill, in comparison to Unrestricted Use SCOs from 6 New York Codes, Rules and Regulations (NYCRR) Subpart 375-6 Remedial Program Soil Cleanup Objectives (NYSDEC 2006).

A total of 940.21 tons of clean stone backfill was bought on-site and placed within the excavation areas.

2.4 Site Restoration

Areas disturbed during construction, aside from the excavation areas, were re-graded to match the surrounding areas. All remnants of the remediation activities were removed from the 254 Maspeth Avenue property after completion of remediation activities. A survey was completed to document that the final surface met the elevation and slope specified in the design documents and drawings. The final restored site condition is shown in the as-built Figure 2-3.

2.5 Demobilization

Upon completion of site restoration and backfilling, the contractor began to demobilize their equipment and materials from the site. Demobilization began the week of September 24 and was completed by October 4, 2012. Demobilization activities included the removal of all construction equipment, odor/vapor suppression equipment, construction materials, and debris. In addition, all temporary facilities and utilities were removed. The temporary excavation fencing around Area A, B, and C excavations were left in place for site control and safety until Cooper Tank implemented their construction activities.

3.0 Summary

The Shallow Soil IRM was successfully completed at the 254 Maspeth Avenue portion of the former Equity Works MGP site in accordance with the Work Plan and included the following activities:

- Excavation of approximately 774.6 cy of non-hazardous MGP-residual impacted soil and non-hazardous C&D materials.
- Offsite transportation and thermal treatment/disposal of 1,671.35 tons of non-hazardous MGP-residual impacted soil and non-hazardous C&D materials to Bayshore Recycling.
- A total of 940.21 tons of stone backfill material was transported to the 254 Maspeth Avenue property and placed in the excavation areas.
- The CERP Plan successfully minimized community impacts during the RA.
- Disturbed areas of the work area were regraded and/or covered with 6-inch gravel cover to be restored to final design elevations.

Notes:
< or U - The compound was not detected at the indicated concentration
J - Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than MDL. The concentration given is an approximate value.

c- calibration acceptablil
c - Calibration acceptability criteria exceeded for this analyte
s - Recovery exceeded control limits for this analyte
(1) Per DER-10, the SCO for Hexavalent or Trivalent Chromium is considered to be met if the analysis for the total species of this contaminant is below the specific SCO for Hexavalent Chromium.

SCO's for organic constituents (volatile organic compounds, semivolatile organic compounds, and pesticides) are capped at 100 ppm for residential use, 500 ppm for commercial use, 1000 ppm for industrial use. SCOs for metals are capped at 10,000 ppm.

Weekly Air Monitoring Summary

Client:	**National Grid**
Location:	**254 Maspeth Avenue, Brooklyn, NY** **Equity Former MGP Site**
Period:	**September 14th through September 19th, 2012**

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits. This data summary report includes both tabular information and written discussions summarizing the ambient air-quality data collected during the report period in accordance with the Equity MGP IRM project CAMP (December 2011).

Introduction

Engineering controls, dust suppression, and odor suppression are used as necessary throughout the daily work activities. Community air monitoring data is reviewed and compared to the NYSDEC/NYSDOH Action Limits. In order to manage the Site more effectively National Grid has employed more conservative Alert and Response Limits to help mitigate fugitive emissions before the Action Limits are reached. The purpose of the Alert and Response limits are to help manage the Site and prevent concentrations above the Action Limits.

- **Table 1**: Site specific Alert, Response and Action Limits and the corresponding Site conditions.

Real-Time Air Monitoring Summary – TVOC and PM_{10}

Continuous real-time air monitoring for PM_{10} and TVOC was conducted upwind and downwind of the work area along the Site perimeter at two (2) PAM (portable air monitoring) stations. The intent of the real-time air monitoring program is to provide an early detection of short-term emissions and potential off Site migration of remediation related PM_{10} and TVOCs. The real-time perimeter air monitoring system consists of an upwind and downwind monitoring station, supplemented by routine periodic/as-needed hand-held and observational air monitoring; one (1) meteorological tower.

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits at the downwind location. PAM-1 was placed upwind of excavation and PAM-2 was placed at a downwind location. Hence, no exceedences were recorded at downwind location and the exceedence of PM_{10} at PAM-1 was attributed to an upwind off-site source. The results of the real-time air monitoring are presented in the following tables:

- **Table 2**: Weekly real-time maximum PM_{10} and TVOC concentrations and periodic hand-held naphthalene and HCN concentrations summary;
- **Table 3**: Concentrations above the Action Limits; and
- **Table 4**: Concentrations above the Response Limits.

Weekly Site Activities, Meteorological Observations, and Site Maps

Additional information related to the air monitoring activities during the report period is included in the following table and figures:

- **Table 5**: Weekly Site activities summary;
- **Table 6**: Weekly meteorological summaries; and
- **Figure 1:** Daily/weekly Site map.

Table 1: Site Specific Alert, Response, and Action Limits and the Corresponding Site Conditions

				Site Condition			
Target – units	**Alert Limit**	**Response Limit**	**Action Limit**	**Operational Condition**	**Alert Condition (Above Background[1])**	**Response Condition (Above Background[1])**	**Action Condition (Above Background[1])**
TVOC (PID) – ppm	3.7	5.0	25.0	$[C_{avg}] \leq 3.7$	$[C_{avg}] > 3.7$ and $[C_{avg}] \leq 5.0$	$[C_{avg}] > 5.0$ and $[C_{avg}] \leq 25.0$	$[C_{avg}] > 25.0$
Benzene (GC) – ppm	NA	NA	1.0	$[C_{avg}] \leq 1.0$	NA	NA	$[C_{avg}] > 1.0$
PM_{10} – $\mu g/m^3$	NA	100	150	$[C_{avg}] \leq 100$	NA	$[C_{avg}] > 100$ and $[C_{avg}] \leq 150$	$[C_{avg}] > 150$

Definitions:

TVOC = Total Volatile Organic Compounds
PID = Photoionization Detector
GC = Gas Chromatograph
PM_{10} = Respirable Particulate Matter
ppm = Parts per million volume
$\mu g/m^3$ = Micrograms per cubic meter
$[C_{avg}]$ = 15-minute average concentration of target
DT = Dräger Tubes
NA = Not applicable, odor intensity will be either an Operational Level or Action Level; there is no Alert and/or Response Limit and there is no Alert Limit for PM_{10}.

Notes:

[1] Background is defined as the current upwind concentration. Background concentrations will be used to calculate the actual Property contributions to TVOCs and PM_{10} during the final evaluation of the Site conditions shown in **Table 3** and **4**.

Table 2: Weekly Real-Time Maximum PM_{10} and TVOC Concentration Summary

	PAM-1		PAM-2

Weekly Air Monitoring Summary

Client:	**National Grid**
Location:	**254 Maspeth Avenue, Brooklyn, NY** **Equity Former MGP Site**
Period:	**September 20th through September 25th, 2012**

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits. This data summary report includes both tabular information and written discussions summarizing the ambient air-quality data collected during the report period in accordance with the Equity MGP IRM project CAMP (December 2011).

Introduction

Engineering controls, dust suppression, and odor suppression are used as necessary throughout the daily work activities. Community air monitoring data is reviewed and compared to the NYSDEC/NYSDOH Action Limits. In order to manage the Site more effectively National Grid has employed more conservative Alert and Response Limits to help mitigate fugitive emissions before the Action Limits are reached. The purpose of the Alert and Response limits are to help manage the Site and prevent concentrations above the Action Limits.

- **Table 1**: Site specific Alert, Response and Action Limits and the corresponding Site conditions.

Real-Time Air Monitoring Summary – TVOC and PM_{10}

Continuous real-time air monitoring for PM_{10} and TVOC was conducted upwind and downwind of the work area along the Site perimeter at two (2) PAM (portable air monitoring) stations. The intent of the real-time air monitoring program is to provide an early detection of short-term emissions and potential off Site migration of remediation related PM_{10} and TVOCs. The real-time perimeter air monitoring system consists of an upwind and downwind monitoring station, supplemented by routine periodic/as-needed hand-held and observational air monitoring; one (1) meteorological tower.

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits at the downwind location. PAM-1 was placed upwind of excavation and PAM-2 was placed at a downwind location. Hence, no exceedences were recorded at downwind location and the exceedence of PM_{10} at PAM-1 was attributed to an upwind off-site source. The results of the real-time air monitoring are presented in the following tables:

- **Table 2**: Weekly real-time maximum PM_{10} and TVOC concentrations and periodic hand-held naphthalene and HCN concentrations summary;
- **Table 3**: Concentrations above the Action Limits; and
- **Table 4**: Concentrations above the Response Limits.

Weekly Site Activities, Meteorological Observations, and Site Maps

Additional information related to the air monitoring activities during the report period is included in the following table and figures:

- **Table 5**: Weekly Site activities summary;
- **Table 6**: Weekly meteorological summaries; and
- **Figure 1:** Daily/weekly Site map.

Table 1: Site Specific Alert, Response, and Action Limits and the Corresponding Site Conditions

				Site Condition			
Target – units	**Alert Limit**	**Response Limit**	**Action Limit**	**Operational Condition**	**Alert Condition (Above Background[1])**	**Response Condition (Above Background[1])**	**Action Condition (Above Background[1])**
TVOC (PID) – ppm	3.7	5.0	25.0	$[C_{avg}] \leq 3.7$	$[C_{avg}] > 3.7$ and $[C_{avg}] \leq 5.0$	$[C_{avg}] > 5.0$ and $[C_{avg}] \leq 25.0$	$[C_{avg}] > 25.0$
Benzene (GC) – ppm	NA	NA	1.0	$[C_{avg}] \leq 1.0$	NA	NA	$[C_{avg}] > 1.0$
PM_{10} – $\mu g/m^3$	NA	100	150	$[C_{avg}] \leq 100$	NA	$[C_{avg}] > 100$ and $[C_{avg}] \leq 150$	$[C_{avg}] > 150$

Definitions:

TVOC = Total Volatile Organic Compounds
PID = Photoionization Detector
GC = Gas Chromatograph
PM_{10} = Respirable Particulate Matter
ppm = Parts per million volume
$\mu g/m^3$ = Micrograms per cubic meter
$[C_{avg}]$ = 15-minute average concentration of target
DT = Dräger Tubes
NA = Not applicable, odor intensity will be either an Operational Level or Action Level; there is no Alert and/or Response Limit and there is no Alert Limit for PM_{10}.

Notes:

[1] Background is defined as the current upwind concentration. Background concentrations will be used to calculate the actual Property contributions to TVOCs and PM_{10} during the final evaluation of the Site conditions shown in **Table 3** and **4**.

PAM = Portable Air Monitoring Station
PM_{10} = Respirable Particulate Matter (µg/m^3)
TVOC = Total Volatile Organic Compounds (ppm)
X = Monitoring not required per Site specific CAMP
ND = No Data
TBD = To Be Determined
PAM-1 = Upwind Monitoring Station
PAM-2 = Downwind Monitoring Station

- Highlighted concentrations remained above the Response or Action Limits after being corrected for the background concentrations and were subject to further analysis based onsite activities and offsite activities (shown in the following tables if applicable).
- PAM stations collect average 15-minute PM_{10} and TVOC concentrations updated every one minute during periods of Site activities (estimated to be Monday – Friday between 7AM and 3PM).

Table 3: Concentrations Above the Action Limits

Parameter	Date	Station	Start Time	End Time	Duration (Mins)	Action Limit	Wind Conditions Start	Wind Conditions End	Location of Background Conc.	Max Elevated Conc.	Background Conc.	Max Conc. – Background Conc.	Site Condition	Comments
NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

PAM = Portable Air Monitoring Station
PM_{10} = Respirable Particulate Matter ($\mu g/m^3$)
TVOC = Total Volatile Organic Compounds (ppm)
VAR = Variable winds (wind direction changed more than 180 degrees between consecutive measurements and/or wind speeds less than 3.0 mph)
NA = Not Applicable
ND = No Data

- Background concentrations are determined using the current upwind concentrations unless winds are determined to be variable.

Table 4: Concentrations Above the Response Limits

Parameter	Date	Station	Start Time	End Time	Duration (Mins)	Response Limit	Wind Conditions Start	Wind Conditions End	Location of Background Conc.	Max Elevated Conc.	Background Conc.	Max Conc. – Background Conc.	Site Condition	Comments
NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

PAM = Portable Air Monitoring Station
PM_{10} = Respirable Particulate Matter ($\mu g/m^3$)
TVOC = Total Volatile Organic Compounds (ppm)
VAR = Variable winds (wind direction changed more than 180 degrees between consecutive measurements and/or wind speeds less than 3.0 mph)
NA = Not Applicable
ND = No Data

- Background concentrations are determined using the current upwind concentrations unless winds are determined to be variable.

Table 5: Weekly Site Activities

	Site Activities
Thursday 9/20/12	•Excavated, disposal and load out of soil (10 trucks) •Routine air monitoring.
Friday 9/21/12	•Excavated, disposal and load out of soil (12 trucks) •Routine air monitoring.
Saturday 9/22/12	•No Site activities; and •No routine air monitoring
Sunday 9/23/12	•No Site activities; and •No routine air monitoring
Monday 9/24/12	•Continued excavating, disposal and load out of soil (12 trucks) •Routine air monitoring.
Tuesday 9/25/12	•Continued excavating, disposal and load out of soil (9 trucks) •Routine air monitoring.

Table 6: Weekly Meteorological Summaries

Meteorological data was recorded and documented daily. Due to high winds, the instrument did not keep a constant log of wind speed and direction. When a malfunction was detected, the device was corrected so logging could continue. Please see Attachment A for the raw Meteorological Data.

Weekly Air Monitoring Summary

Client:	**National Grid**
Location:	**254 Maspeth Avenue, Brooklyn, NY** **Equity Former MGP Site**
Period:	**September 26th through September 28th, 2012**

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits. This data summary report includes both tabular information and written discussions summarizing the ambient air-quality data collected during the report period in accordance with the Equity MGP IRM project CAMP (December 2011).

Introduction

Engineering controls, dust suppression, and odor suppression are used as necessary throughout the daily work activities. Community air monitoring data is reviewed and compared to the NYSDEC/NYSDOH Action Limits. In order to manage the Site more effectively National Grid has employed more conservative Alert and Response Limits to help mitigate fugitive emissions before the Action Limits are reached. The purpose of the Alert and Response limits are to help manage the Site and prevent concentrations above the Action Limits.

- **Table 1**: Site specific Alert, Response and Action Limits and the corresponding Site conditions.

Real-Time Air Monitoring Summary – TVOC and PM_{10}

Continuous real-time air monitoring for PM_{10} and TVOC was conducted upwind and downwind of the work area along the Site perimeter at two (2) PAM (portable air monitoring) stations. The intent of the real-time air monitoring program is to provide an early detection of short-term emissions and potential off Site migration of remediation related PM_{10} and TVOCs. The real-time perimeter air monitoring system consists of an upwind and downwind monitoring station, supplemented by routine periodic/as-needed hand-held and observational air monitoring; one (1) meteorological tower.

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits at the downwind location. PAM-1 was placed upwind of excavation and PAM-2 was placed at a downwind location. Hence, no exceedences were recorded at downwind location and the exceedence of PM_{10} at PAM-1 was attributed to an upwind off-site source. The results of the real-time air monitoring are presented in the following tables:

- **Table 2**: Weekly real-time maximum PM_{10} and TVOC concentrations and periodic hand-held naphthalene and HCN concentrations summary;
- **Table 3**: Concentrations above the Action Limits; and
- **Table 4**: Concentrations above the Response Limits.

Weekly Site Activities, Meteorological Observations, and Site Maps

Additional information related to the air monitoring activities during the report period is included in the following table and figures:

- **Table 5**: Weekly Site activities summary;
- **Table 6**: Weekly meteorological summaries; and
- **Figure 1:** Daily/weekly Site map.

Table 1: Site Specific Alert, Response, and Action Limits and the Corresponding Site Conditions

				Site Condition			
Target – units	**Alert Limit**	**Response Limit**	**Action Limit**	**Operational Condition**	**Alert Condition (Above Background[1])**	**Response Condition (Above Background[1])**	**Action Condition (Above Background[1])**
TVOC (PID) – ppm	3.7	5.0	25.0	$[C_{avg}] \leq 3.7$	$[C_{avg}] > 3.7$ and $[C_{avg}] \leq 5.0$	$[C_{avg}] > 5.0$ and $[C_{avg}] \leq 25.0$	$[C_{avg}] > 25.0$
Benzene (GC) – ppm	NA	NA	1.0	$[C_{avg}] \leq 1.0$	NA	NA	$[C_{avg}] > 1.0$
PM_{10} – $\mu g/m^3$	NA	100	150	$[C_{avg}] \leq 100$	NA	$[C_{avg}] > 100$ and $[C_{avg}] \leq 150$	$[C_{avg}] > 150$

Definitions:

TVOC = Total Volatile Organic Compounds
PID = Photoionization Detector
GC = Gas Chromatograph
PM_{10} = Respirable Particulate Matter
ppm = Parts per million volume
$\mu g/m^3$ = Micrograms per cubic meter
$[C_{avg}]$ = 15-minute average concentration of target
DT = Dräger Tubes
NA = Not applicable, odor intensity will be either an Operational Level or Action Level; there is no Alert and/or Response Limit and there is no Alert Limit for PM_{10}.

Notes:

[1] Background is defined as the current upwind concentration. Background concentrations will be used to calculate the actual Property contributions to TVOCs and PM_{10} during the final evaluation of the Site conditions shown in **Table 3** and **4**.

Table 2: Weekly Real-Time Maximum PM_{10} and TVOC Concentration Summary

	PAM-1		PAM-2	
	PM_{10} µg/m^3	**TVOC ppm**	**PM_{10} µg/m^3**	**TVOC ppm**
Maximum 15-Minute Average Concentrations (Action Limits: PM_{10} = 150 ug/m^3 / TVOC = 25 ppm /Response Limits: PM_{10} = 100 ug/m^3 / TVOC = 5.0 ppm)				
Wednesday 9/26/12	75	0	18	0.1
Thursday 9/27/12	244	0.1	34	0.3
Friday 9/28/12	71	0	20	0

PAM = Portable Air Monitoring Station
PM_{10} = Respirable Particulate Matter (µg/m^3)
TVOC = Total Volatile Organic Compounds (ppm)
X = Monitoring not required per Site specific CAMP
ND = No Data
TBD = To Be Determined
PAM-1 = Upwind Monitoring Station
PAM-2 = Downwind Monitoring Station

- Highlighted concentrations remained above the Response or Action Limits after being corrected for the background concentrations and were subject to further analysis based onsite activities and offsite activities (shown in the following tables if applicable).
- PAM stations collect average 15-minute PM_{10} and TVOC concentrations updated every one minute during periods of Site activities (estimated to be Monday – Friday between 7AM and 3PM).

Table 3: Concentrations Above the Action Limits

Parameter	Date	Station	Start Time	End Time	Duration (Mins)	Action Limit	Wind Conditions Start	Wind Conditions End	Location of Background Conc.	Max Elevated Conc.	Background Conc.	Max Conc. – Background Conc.	Site Condition	Comments
NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

PAM = Portable Air Monitoring Station
PM_{10} = Respirable Particulate Matter ($\mu g/m^3$)
TVOC = Total Volatile Organic Compounds (ppm)
VAR = Variable winds (wind direction changed more than 180 degrees between consecutive measurements and/or wind speeds less than 3.0 mph)
NA = Not Applicable
ND = No Data

- Background concentrations are determined using the current upwind concentrations unless winds are determined to be variable.

Table 4: Concentrations Above the Response Limits

Parameter	Date	Station	Start Time	End Time	Duration (Mins)	Response Limit	Wind Conditions Start	Wind Conditions End	Location of Background Conc.	Max Elevated Conc.	Background Conc.	Max Conc. – Background Conc.	Site Condition	Comments
NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

PAM = Portable Air Monitoring Station
PM_{10} = Respirable Particulate Matter ($\mu g/m^3$)
TVOC = Total Volatile Organic Compounds (ppm)
VAR = Variable winds (wind direction changed more than 180 degrees between consecutive measurements and/or wind speeds less than 3.0 mph)
NA = Not Applicable
ND = No Data

- Background concentrations are determined using the current upwind concentrations unless winds are determined to be variable.

Table 5: Weekly Site Activities

	Site Activities
Wednesday 9/26/12	•Excavated, disposal and load out of soil (1 truck) •Backfill offloaded onsite in excavation areas (5 loads) •Routine air monitoring.
Thursday 9/27/12	•Excavated, disposal and load out of soil (1 truck) •Backfill offloaded onsite in excavation areas (15 loads) •Routine air monitoring. •End of day: Meteorological station taken down
Friday 9/28/12	•Demobilization Site activities; and •Routine air monitoring for morning hours

Table 6: Weekly Meteorological Summaries

Meteorological data was recorded and documented daily.	Please see Attachment A for the raw Meteorological Data.
