LABORATORY USE ONLY

Discrepancies Between Sample Labels and COC Record? Y or N

Explain:

Samples were:
1. Shipped ___ or Hand Delivered X Airbill# ___
2. Ambient or chilled. Temp 10°-11° on ICE
3. Received in good condition: (Y) or N
4. Properly preserved: (Y) or N

COC Tape was:
1. Present on outer package: Y or (N)
2. Unbroken on outer package: Y or N
3. COC record present & complete upon sample receipt: Y or N

Executive Summary

Data validation was performed by Gregory A. Malzone of AECOM - Pittsburgh on one data report for the air and soil vapor samples collected at the Equity Former MGP Site in Brooklyn, NY. The samples were analyzed by H2M Labs, Inc., 575 Broad Hollow Road, Melville, NY 10281 for volatile organic compounds using USEPA Compendium Method TO-15 and NJDEP – SRWM Low Level USEPA TO-15 Method (NJDEP-LL-TO15-3/2007).

The following samples were collected on November 17, 2009 and submitted to H2M on November 18, 2009. The samples were assigned to H2M sample delivery group (SDG) AECOM061.

Table 1
Sample Submittals – Equity SVI

Field ID	H2M ID	Matrix	Date Sampled	Canister ID	COC Number	H2M SDG
AMB-1	0912538-001	Ambient Air	11/17/2009	3393	0283	AECOM061
IA-1	0912538-002	Indoor Air	11/17/2009	3413	0283	AECOM061
IA-2	0912538-003	Indoor Air	11/17/2009	3421	0283	AECOM061
SV-1	0912538-004	Soil Vapor	11/17/2009	3394	0283	AECOM061
SV-2	0912538-005	Soil Vapor	11/17/2009	3418	0283	AECOM061

The validation was based on "USEPA *Compendium Method TO-15, Determination of VOCs in Air Collected in Specially Prepared-Canisters and Analyzed by Gas Chromatography / Mass Spectrometry (GC/MS)"*, January 1999 and NJDEP – SRWM Low Level USEPA TO-15 Method (NJDEP-LL-TO15-3/2007). The data qualifiers were applied according to the general guidelines in the New Jersey Department of Environmental Protection Standard Operating Procedures (SOPs) Revision No. 3, SOP No. BEMQA 5.A.13. "*Standard Operating Procedures for the Quality Assurance Data Validation of Analytical Deliverables- TCL- Organics (based on the USEPA SOW OLM04.2 with Revisions)*."

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, matrix spike/matrix spike duplicate (MS/MSD), laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

The data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the analytes in the media tested (i.e., air and soil vapor) with some qualifications. Several data points were qualified as estimates because of method and/or instrument bias. The results for sample SV-2 required revision to account for dilution. No data points were rejected. Completeness of 100% was achieved for this data set. This is within the goal of 90-100% and is acceptable. The data qualifier summaries are attached as Appendix B of this report. A glossary of data qualifier definitions is included in Appendix A of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

AECOM061

a. Blank Contamination (pp. V94-V96): Methylene chloride was detected in the method blank, VBLK113009, at a concentration of 0.25 ppbv (0.868 µg/m3). The methylene chloride results for samples AMB-1, IA-1, IA-2, SV-1, and SV-2 were greater than five times the blank level and the "B" flags were removed as unnecessary.

b. Calibrations (pp. V285-V287): The continuing calibration standard percent differences for 1,2,4-trichlorobenzene, 1,2,4,5-tetrachlorobenzene, naphthalene, 2-methylnaphthalene were greater than the quality control limit of 30% on 11/30/09 at 11:32 on instrument HP5973I. Sensitivity increased with respect to the initial calibration average relative response factors. All samples were affected. The positive 1,2,4-trichlorobenzene, 1,2,4,5-tetrachlorobenzene, naphthalene, 2-methylnaphthalene results were qualified "J," as estimated concentrations. The associated non-detect results did not require qualification in response to the high instrument bias.

c. Laboratory Control Sample Recoveries and RPDs (pp. V4-V6): The LCS (LFB113009) recovery for o-xylene was greater than the upper control limit. All samples were affected. The o-xylene results for samples AMB-1, IA-1, IA-2, SV-1, and SV-2 were positive and were qualified "J," as estimated concentrations, because of high method bias.

d. Report Revision Required (Sample SV-2): Sample SV-2 was analyzed at an initial 10-fold to bring the target compound concentrations into the calibration range and minimize matrix interference. The 10-fold dilution was not taken into account when the data were reported. The data summary report for sample SV-2 was revised with the correct results.

e. Dilutions: Sample IA-2 required analysis at a 10-fold dilution to bring the ethanol and isopentane concentrations into the calibration range. The results for both analytical runs were reported as required. The surrogate recoveries for the initial and diluted analyses were acceptable. No data qualifications were required.

   Sample SV-1 required analysis at a two-fold dilution to bring the naphthalene concentration into the calibration range. The results for both analytical runs were reported as required. The surrogate recoveries for the initial and diluted analyses were acceptable. No data qualifications were required.

   Sample SV-2 was analyzed at an initial 10-fold to bring the target compound concentrations into the calibration range and minimize matrix interference. The results for both analytical runs were reported as required. The surrogate recoveries for the diluted analysis were acceptable. No data qualifications were required.

.

2.0 Notes

The results for sample SV-2 required revision to account for the 10-fold dilution.

Positive volatile organic compound results less than the reporting limit (i.e., practical quantitation limit), but greater than the method detection limit (MDL) were qualified “J,” as estimated concentrations, due to increased uncertainty near the detection limit. These “J” qualifiers were maintained in this data validation.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

Report original (1x) analysis for all analytes except ethanol and isopentane. CAM 12/11/09

Method: ETO-15

Parameter(s)	Result (ppbv)	Units	Qualifier	D.F.	Result (µg/m³)	Units	Date Analyzed
2,3-Dimethylpentane	0.62	ppbv	J	1	2.54	µg/m³	11/30/2009 3:46 PM
2,3-Dimethylpentane	< 8.00	ppbv	D	10	< 32.8	µg/m³	11/30/2009 7:09 PM
2-Methylpentane	5.98	ppbv		1	21.1	µg/m³	11/30/2009 3:46 PM
2-Methylpentane	4.7	ppbv	JD	10	16.6	µg/m³	11/30/2009 7:09 PM
Freon-114	< 0.160	ppbv		1	< 1.12	µg/m³	11/30/2009 3:46 PM
Freon-114	< 1.60	ppbv	D	10	< 11.2	µg/m³	11/30/2009 7:09 PM
Isopentane	82.4	ppbv	E	1	243	µg/m³	11/30/2009 3:46 PM
Isopentane	68.7	ppbv	D	10	203	µg/m³	11/30/2009 7:09 PM
Propylene	1.08	ppbv		1	1.86	µg/m³	11/30/2009 3:46 PM
Propylene	< 8.00	ppbv	D	10	< 13.8	µg/m³	11/30/2009 7:09 PM
Dichlorodifluoromethane	0.580	ppbv		1	2.87	µg/m³	11/30/2009 3:46 PM
Dichlorodifluoromethane	< 1.60	ppbv	D	10	< 7.91	µg/m³	11/30/2009 7:09 PM
Chloromethane	0.480	ppbv		1	0.991	µg/m³	11/30/2009 3:46 PM
Chloromethane	< 1.60	ppbv	D	10	< 3.30	µg/m³	11/30/2009 7:09 PM
1,3-Butadiene	0.19	ppbv	J	1	0.420	µg/m³	11/30/2009 3:46 PM
1,3-Butadiene	< 8.00	ppbv	D	10	< 17.7	µg/m³	11/30/2009 7:09 PM
Bromomethane	< 0.160	ppbv		1	< 0.621	µg/m³	11/30/2009 3:46 PM
Bromomethane	< 1.60	ppbv	D	10	< 6.21	µg/m³	11/30/2009 7:09 PM
Vinyl chloride	< 0.160	ppbv		1	< 0.409	µg/m³	11/30/2009 3:46 PM
Vinyl chloride	< 1.60	ppbv	D	10	< 4.09	µg/m³	11/30/2009 7:09 PM
Chloroethane	< 0.160	ppbv		1	< 0.422	µg/m³	11/30/2009 3:46 PM
Chloroethane	< 1.60	ppbv	D	10	< 4.22	µg/m³	11/30/2009 7:09 PM
Ethanol	160	ppbv	E	1	301	µg/m³	11/30/2009 3:46 PM
Ethanol	160	ppbv	D	10	301	µg/m³	11/30/2009 7:09 PM
Isopropanol	7.08	ppbv		1	17.4	µg/m³	11/30/2009 3:46 PM
Isopropanol	6.6	ppbv	JD	10	16.2	µg/m³	11/30/2009 7:09 PM
Methylene chloride	1.50	ppbv	B	1	5.21	µg/m³	11/30/2009 3:46 PM
Methylene chloride	5.10	ppbv	D	10	17.7	µg/m³	11/30/2009 7:09 PM
Acetone	7.72	ppbv		1	18.3	µg/m³	11/30/2009 3:46 PM
Acetone	7.2	ppbv	JD	10	17.1	µg/m³	11/30/2009 7:09 PM
Carbon disulfide	< 0.800	ppbv		1	< 2.49	µg/m³	11/30/2009 3:46 PM
Carbon disulfide	< 8.00	ppbv	D	10	< 24.9	µg/m³	11/30/2009 7:09 PM
1,1,2-Trichloro-1,2,2-trifluoroethane	< 0.160	ppbv		1	< 1.23	µg/m³	11/30/2009 3:46 PM
1,1,2-Trichloro-1,2,2-trifluoroethane	< 1.60	ppbv	D	10	< 12.3	µg/m³	11/30/2009 7:09 PM
1,1-Dichloroethene	< 0.160	ppbv		1	< 0.634	µg/m³	11/30/2009 3:46 PM

Qualifiers:

D - Results for Dilution
D.F. = Dilution Factor
H = Sample recieved/analyzed outside of analytical holding time

SDG NARRATIVE FOR VOLATILE ANALYSES
SAMPLES RECEIVED: 11/18/09
SDG #: AECOM061

For Samples:

AMB-1	SV-1
IA-1	SV-2
IA-2	

The above air samples were analyzed for a specific list of volatile organic analytes according to the requirements of EPA method TO-15. They are reported with NYSDEC ASP 2000 category B deliverables.

All quality control and calibration requirements were met, unless discussed below, and no problems were encountered with sample analyses.

No matrix spike/ matrix spike duplicate was requested, but a lab-fortified blank was analyzed. All recoveries met the Q. C. limits with the exception of a result for o-xylene slightly above the high limit.

A low level of methylene chloride was present in the method blank. Methylene chloride results are flagged with the qualifier "B" if found in the samples.

As requested, some analytes are reported to a low PQL of 0.16 ppbv. No estimated values below this level (with the qualifier "J") are reported, and no values are reported below the equivalent levels in the dilutions.

Please note that the PQLs in the method blank for the low analytes are 0.16 ppbv. Since the reporting data system is set up for higher PQLs, the value is rounded to one decimal and is reported as 0.2 ppbv (rounded) in the report for the blank due to the reporting format.

TICs suspected to be column bleed from the analytical column were flagged with the qualifier "X".

%D for the analytes 1,2,4,5-tetramethylbenzene, naphthalene and 2-methyl naphthalene exceeded 30% in the continuous calibration check (CCV). Results for these compounds therefore may be outside the expected accuracy limits. It should be noted, that in spite of the deviation for the CCV, the results for the lab fortified blank (LFB) for these compounds met the acceptance limits.

Sample results are reported in both ppbv and ug/m3 units.

Executive Summary

Data validation was performed by Gregory A. Malzone of AECOM - Pittsburgh on one data report for the August 2010 air and soil vapor samples collected at the Equity Former MGP Site in Brooklyn, NY. The samples were analyzed by H2M LABS, INC. at 575 Broad Hollow Road, Melville, NY 11747 for volatile organic compounds using USEPA Compendium Method TO-15 and helium using ASTM Method D-1946-03.

The following samples were collected on August 28, 2010 and submitted to ATL on August 29, 2010. The samples were assigned to H2M sample delivery group (SDG) AECOM111.

Table 1
Sample Submittals – August 2010 Equity SVI

Field ID	ATL ID	Matrix	Date Sampled	Canister ID
AMB-1	1010186-001A	Ambient Air	8/28/2010	3415
IA-1	1010186-002A	Indoor Air	8/28/2010	1601
SV-1	1010186-003A	Soil Vapor	8/28/2010	1617

The data were evaluated for conformance to method specifications and qualifiers were applied using the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, EPA 540/R-99-008, May 1999, as they apply to the analytical methods employed.

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, matrix spike/matrix spike duplicate (MS/MSD), laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

The data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the analytes in the media tested (i.e., air and soil vapor) with some qualifications. No data points were rejected. Completeness of 100% was achieved for this data set. This is within the goal of 90-100% and is acceptable. The data qualifier summaries are attached as Appendix B of this report. A glossary of data qualifier definitions is included in Appendix A of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

1010186

Surrogate Recovery/Dilutions (p. V3): Sample IA-1 required analysis at a 20-fold dilution to bring the ethanol and isopropanol concentrations into the calibration range. The ethanol and isopropanol results for sample IA-1 were reported from the 20-fold dilution analysis. All other target compounds for sample IA-1 were reported from the undiluted analysis. The surrogate recoveries for the undiluted and 20-fold dilution analyses were within the quality control limits. No data qualifications were required.

Calibrations (pp. V185, V188): The relative standard deviations for methylene chloride and 2-methylnaphthalene were greater than the method limit of 30% in the September 2, 2010 initial calibration of instrument HP5973I. The positive and non-detect results for associated samples AMB-1, IA-1 and SV-1 were qualified "J/UJ," as estimates, because of the calibration nonconformance.

2.0 Helium

1010186

No data quality issues were noted. No data qualifications were required.

3.0 Notes

The analyte list for this project contained the “non-routine” compounds: isopentane, 2-methyl pentane, 2,3-dimethyl pentane, thiophene, 1,2,3-trimethyl pentane, indan, indene, 1,2,4,5-tetramethyl benzene, naphthalene and 2-methylnaphtalene. An independently-traceable source was not available for these compounds, so they were not spiked into the LCS as an independent (i.e., second source) check of method accuracy.

Tentatively Identified Compounds (TICs) were identified by the laboratory and are included on the Form 1s.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

H2M LABS, INC.

SDG NARRATIVE FOR VOLATILES ANALYSES
SAMPLE(S) RECEIVED: 8/31/10
SDG #: AECOM111

For Sample(s):

AMB-1
IA-1
SV-1

The above air sample(s) were was/were analyzed for a select list of volatile organic analytes by EPA method TO-15 according to the requirements of the NYSDEC ASP with category B deliverables.

All QC data and calibrations met the requirements of the method, unless discussed below, and no problems were encountered with sample analysis.

No matrix spike/matrix spike duplicate was requested. Two lab fortified blanks (LFB) were analyzed and indicates good method efficiency for all 59 analytes included in the spike with the exception of a low recovery for 1,2,4-trichlorobenzene in LFB090210. This LFB was analyzed with the dilution of sample 1A-1, and 1,2,4-trichlorobenzene was not an analyte that required dilution. No recoveries were reportable for the LFB analyses for the following analytes, because the mix used did not contain these compounds: Isopentane, 2-methyl pentane, 2,3-dimethyl pentane, thiophene, 1,2,3-trimethyl pentane, indan, indene, 1,2,4,5-tetramethyul benzene, naphthalene, 2-methylnaphtalene. Method efficiency (accuracy) result can be taken from the continuous calibration check (CCV) data on form 7, because the procedure of analysis is the same. All analytes above showed a recovery between 70 and 130%.

Sample 1A-1 was reanalyzed at a dilution because a targeted analyte exceeded the calibration range. Both sets of data are reported.

%RPD for two analytes in the initial calibration exceeded 30% but were below 40%. One of the analytes, 2-methylnaphthalene was not found, and results for methylene chloride below the second calibration level of 1.8 ppv are regarded estimated. (The calibration at the low level of 0.18 was affected by contribution of contamination.)

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Date Reported: September 20, 2010

SDG NARRATIVE FOR HELIUM ANALYSES
SAMPLE(S) RECEIVED: 8/31/10
SDG #: AECOM111

For Sample(s):

SV-1

The above sample(s) were was/were analyzed for helium by GC-TCD with nitrogen as carrier gas according to method ASTM-D1945-03.

The sample was collected in a canister for TO-15 analysis. The canister was pressurized, which resulted in a 1:2 "dilution".

No matrix spike/matrix spike duplicate was analyzed. Results for a lab fortified blank indicate good method efficiency.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Executive Summary

Data validation was performed by Gregory A. Malzone of AECOM - Pittsburgh on two data reports for the air and soil vapor samples collected at the Equity Former MGP Site in Brooklyn, NY. The samples were analyzed by Air Toxics, Ltd. (ATL), 180 Blue Ravine Road, Suite B, Folsom, CA, 95630-1020 for volatile organic compounds using USEPA Compendium Method TO-15 and helium using ASTM Method D-1946.

The following samples were collected on March 14, 2010 and submitted to ATL on March 16, 2010. The samples were assigned to ATL work orders: 1003359A and 1003352A/B.

Table 1
Sample Submittals – 2010 Equity SVI

Field ID	ATL ID	Matrix	Date Sampled	Canister ID
IA2	1003359A-01	Indoor Air	3/14/2010	35273
IA1	1003359A-02	Indoor Air	3/14/2010	02327
IA1 Dup	1003359A-03	Indoor Air (QC)	3/14/2010	21073
AMB1	1003359A-06	Ambient Air	3/14/2010	5755
SV2	1003552A/B-01	Soil Vapor	3/14/2010	33581
SV1	1003552A/B-02	Soil Vapor	3/14/2010	33888

The data were evaluated for conformance to method specifications and qualifiers were applied using the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, EPA 540/R-99-008, May 1999, as they apply to the analytical methods employed.

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, matrix spike/matrix spike duplicate (MS/MSD), laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

The data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the analytes in the media tested (i.e., air and soil vapor) with some qualifications. The methylene chloride results were qualified as estimates because of low method bias. Two chloromethane results were qualified as estimates because of field sampling and/or laboratory imprecision and/or sample heterogeneity. No data points were rejected. Completeness of 100% was achieved for this data set. This is within the goal of 90-100% and is acceptable. The data qualifier summaries are attached as Appendix B of this report. A glossary of data qualifier definitions is included in Appendix A of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

1003359A

Laboratory Control Sample Recovery (pp. 325-326): The LCS (1003359A-09A) recovery for methylene chloride was less than the lower quality control limit. All samples were affected. The methylene chloride results for samples AMB1, IA1, IA1 Dup, and IA2 were non-detect and were qualified "UJ," as estimates, because of low method bias.

1003552A

Laboratory Control Sample Recovery (pp. 325-326): The LCS (1003552A-05A) recovery for methylene chloride was less than the lower quality control limit. All samples were affected. The methylene chloride results for samples SV1 and SV2 were non-detect and were qualified "UJ," as estimates, because of low method bias.

2.0 Helium

1003552B

No data quality issues were noted. No data qualifications were required.

3.0 Field Duplicate Precision

A field duplicate sample was collected for sample IA1. The results for the parent and field duplicate samples were non-detects, with exception to those listed in the table below. The advisory limit for RPD is 25% for air/soil gas, or the difference between the primary and field duplicate results must be less than or equal to the reporting limit for results less than five times the reporting limit. The primary and field duplicate results for chloromethane required qualification (i.e., "J") as estimated concentrations, because of field sampling and/or laboratory imprecision and/or sample heterogeneity. See Table 2 below for details.

Table 2
Field Duplicate Precision – 2010 Equity SVI

Parameter	IA1		IA1 Dup		RPD (%)
Freon 11	0.23	ppbV	0.22	ppbV	4

Indene	1.4	ppbV	1.2	ppbV	15
Naphthalene	4.3	ppbV	4.2	ppbV	2

4.0 Notes

The analyte list for this project contained the “non-routine” compounds: 2-methylpentane, 2,3-dimethylpentane, indene, indan, and thiophene. An independently-traceable source was not available for these compounds, so they were not spiked into the LCS as an independent (i.e., second source) check of method accuracy.

Tentatively Identified Compounds (TICs) were identified by the laboratory and are included on the Form 1s.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

Executive Summary

Overview

A data assessment was performed by Gregory A. Malzone of AECOM Pittsburgh on eight data packages from H2M Laboratories, Inc., 575 Broad Hollow Road, Melville, NY 11747-8436 (H2M) and for the analysis of groundwater samples collected on September 9-November 6, 2011 at the Equity Site.

The following analytical methods were requested on the chain-of-custody (COC) records:

- Volatile Organic Compounds by USEPA SW-846 Method 8260B,
- Semivolatile Organic Compounds by USEPA SW-846 Method 8270C,
- Trace Metals by USEPA SW-846 Methods 6010B and 7470A/7471A,
- Total Cyanide by USEPA SW-846 Method 9012A,
- Weak Acid Dissociable (WAD) Cyanide by USEPA SW-846 9012B;
- Available Cyanide by USEPA OIA 1677, and
- Percent Solids for Dry Weight Corrections by Method SM2540 G mod.

The data were evaluated for conformance to method specifications and qualifiers were applied using the USEPA Region II SOPs and the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, document number EPA 540/R-99-008, May 1999 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, EPA-540-R-10-011, October 2010, as they apply to the analytical methods employed. Field duplicate RPD review and applicable control limits were taken from the USEPA Region I Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses, December 1996.

The samples were processed and the results were reported under eight sample delivery groups (SDGs). Table 1 provides a sample submittal list.

SB-19 (85-87.5)	460-33471-2	Soil	11/6/2011

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

Inorganic data quality was evaluated by reviewing the following parameters: holding times, matrix spikes, initial calibrations, continuing calibration verification standard recoveries, contract required detection limit standard recoveries, laboratory control samples, ICP interference check sample recoveries, ICP serial dilution results, field and laboratory duplicates, laboratory blanks, and analyte quantitation.

Ninety-six non-detect volatiles results were rejected because the holding time was grossly exceeded for samples TP-4 (3-4) and TP-4 (7-7.5). All other data, not rejected, have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the compounds and analytes in the media tested (i.e., soil) with the qualifications described below. Completeness of 89.9% was achieved for this data set. This is within the goal of 90-100% and is acceptable.

A glossary of data qualifier definitions is included in Appendix A of this report. The data qualifier summaries are attached as Appendix B of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

K2279

Holding Times (p. 7-8, 16): Samples TP-4 (3-4) and TP-4 (7-7.5) were analyzed 31 days and 28 days, respectively, outside the USEPA 14-day holding time because of a laboratory oversight. The holding time was grossly exceeded for both samples (i.e., > 28 days from sample collection). The positive and non-detect volatile results for samples TP-4 (3-4) and TP-4 (7-7.5) were qualified "J" and "R," as estimated concentrations, and rejected, respectively, because of low bias due to the holding time being grossly exceeded.

460-31578-1

Dilutions: Sample SB-29 (98) required analysis at an initial 100-fold dilution, using the medium-level soil (MLS) methanol extract, to bring the target compound concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required.

460-31629-1

Dilutions: Samples SB-20 (1-2) and SB-20 (72.5-75) required analysis at an initial 50-fold dilution using the MLS methanol extract, to bring the target compound concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required. The initial dilutions elevated the reporting limits and MDLs for non-detect results.

460-31654-1

No data quality issues were noted. No data qualifications were required.

460-32732-1

Dilutions: Sample SB-22 (107.5-110) required analysis using the MLS methanol extract, to bring the target compound concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required.

Matrix Spike Recoveries and RPDs (pp. 59-60): The SB-22 (107.5-110) MS/MSD recoveries for benzene, toluene, and total xylenes were less than the lower advisory limits. The MS/MSD recoveries for benzene and toluene were less than 10%. The benzene, toluene, and total xylenes results for sample SB-22 (107.5-110) were positive and were qualified "J," as estimated concentrations, because of low bias, attributable to matrix effects.

460-32830-1

Dilutions: Sample SB-24 (98.5-99) required analysis using the MLS methanol extract to bring the target compound concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required.

460-33095-1

Dilutions: Samples SB-30 (78-79), Dup-1, and SB-19 (2-5) required analysis using the MLS methanol extract, to bring the target compound concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required.

Matrix Spike Recoveries and RPDs (pp. 93-96): The SB-30 (92-94) MS/MSD recoveries for benzene, toluene, ethylbenzene, total xylenes, and styrene were less than the lower advisory limits but greater than 10%. The positive and non-detect benzene, toluene, ethylbenzene, total xylenes, and styrene results for sample SB-19 (92-94) were qualified "J" and "UJ," as estimates, because of low bias, attributable to matrix effects.

The styrene spike added to SB-30 (78-79) MS/MSD was less than 25% of the original sample result. The styrene spike recoveries and RPD could not be calculated. No data qualifications were required.

460-33471-1

No data quality issues were noted. No data qualifications were required.

2.0 Semivolatile Organic Compounds

K1658/K2279

Calibrations (K2279 pp.1304-1307, 1341-1342): The initial calibration relative standard deviations (RSDs) for benzaldehyde, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and hexachlorocyclopentadiene were greater than 15% on 09/27/11 on instrument S3. The benzaldehyde, 2,4-dinirophenol, 4,6-dinitro-2-methylphenol, and hexachlorocyclopentadiene results for associated samples TP-4 (3-4) and TP-4 (7-7.5) were non-detect and were qualified "UJ," as estimates, because of calibration nonconformance.

Surrogate Recoveries/Dilutions (K1658 p. 724): Sample TP-4 (7-7.5) required analysis at an initial five-fold dilution and a subsequent 25-fold dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out in the 25-fold dilution analysis and could not be used to evaluate method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in-control. No data qualifications were required. The initial dilution elevated the reporting limits and MDLs for non-detect results.

460-31578-1

Calibrations (pp.571-573): The continuing calibration percent differences (%Ds) for indeno(1,2,3-cd)pyrene and benzo(g,h,i)perylene were greater than the upper quality control limit of 20% on 09/27/11 at 13:04 on instrument BNAMS4. Sensitivity increased with respect to the initial calibration average relative response factors. The positive indeno(1,2,3-cd)pyrene and benzo(g,h,i)perylene results for associated samples SB-21 (0-5) and SB-29 (0-5) were qualified "J," as estimated concentrations, because of high instrument bias.

Surrogate Recoveries/Dilutions (p. 336): Sample SB-29 (98) required analysis at an initial 10-fold dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out and could not be used to evaluate method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in-control. No data qualifications were required.

Samples SB-21 (0-5), SB-22 (0-5), and SB-29 (0-5) required analysis at an initial two to five-fold dilution to bring the target compound concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required. The initial dilutions elevated the reporting limits and MDLs for non-detect results.

460-31629-1

Laboratory Control Sample Recoveries (p.311): The LCS 460-87462/2-A recoveries for benzo(b)fluoranthene and benzo(a)pyrene were greater than the upper quality control limits. The positive benzo(b)fluoranthene and benzo(a)pyrene results for associated samples SB-20 (1-2), SB-20 (72.5-75), and SB-20 (108-110) were qualified "J," as estimated concentrations, because of high method bias.

Surrogate Recoveries/Dilutions: Samples SB-20 (1-2) and SB-20 (72.5-75) required analysis at an initial two to five-fold dilution to bring the target compound concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required. The initial dilutions elevated the reporting limits and MDLs for non-detect results.

460-31654-1

No data quality issues were noted. No data qualifications were required.

460-32732-1

No data quality issues were noted. No data qualifications were required.

460-32830-1

Surrogate Recoveries/Dilutions (p. 292): Sample SB-24 (98.5-99) required analysis at an initial 10-fold dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out and could not be used to evaluate method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in-control. The initial dilution elevated the MDLs and RLs for non-detect results. No data qualifications were required.

460-33095-1

Surrogate Recoveries/Dilutions (p. 348): Sample SB-19 (2-5) required analysis at an initial 10-fold dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out and could not be used to evaluate method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in-control. The initial dilution elevated the MDLs and RLs for non-detect results. No data qualifications were required.

Samples SB-30 (78-79), Dup-1, and SB-30 (2-5) required analysis at an initial two to five-fold dilution to bring the target compound concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required. The initial dilutions elevated the reporting limits and MDLs for non-detect results.

Matrix Spike Recoveries and RPDs (pp. 350-351): The SB-30 (92-94) MS and/or MSD recoveries for phenanthrene, fluoranthene, benzo(b)fluoranthene, benzo(a)pyrene, dibenz(a,h)anthracene, and benzo(g,h,i)perylene were greater than the upper advisory limits. No data qualifications were required because phenanthrene, fluoranthene, benzo(b)fluoranthene, benzo(a)pyrene, dibenz(a,h)anthracene, and benzo(g,h,i)perylene were not detected in sample SB-30 (92-94).

460-33471-1

No data quality issues were noted. No data qualifications were required.

3.0 Trace Metals

K1658

Blank Contamination (p. 2521): Antimony was detected ion the initial calibration blank analyzed on 09/22/11 at 08:05 on instrument Optima3 at a concentration estimated below the reporting limit. The antimony result for associated sample TP-4 (3-4) was less than five times the blank level and was qualified "U," as undetected, because of laboratory contamination.

Laboratory Duplicate RPDs (p. 2528): The laboratory duplicate relative percent difference for sample TP-4 (7-7.5) was greater than the maximum quality control limit of 35%. The mercury results for associated samples TP-4 (3-4) and TP-4 (7-7.5) were positive and were qualified "J," as estimated concentrations, because of method imprecision and/or matrix effects.

Matrix Spike Recovery (p. 2527): The TP (7-7.5) MS recovery for mercury was less than the lower advisory limit at 69%. The mercury results for associated samples TP-4 (3-4) and TP-4 (7-7.5) were positive and were qualified "J," as estimated concentrations, because of low bias, attributable to matrix effects.

460-31578-1

No data quality issues were noted. No data qualifications were required.

460-31629-1

No data quality issues were noted. No data qualifications were required.

460-31654-1

No data quality issues were noted. No data qualifications were required.

460-32732-1

No data quality issues were noted. No data qualifications were required.

460-32830-1

No data quality issues were noted. No data qualifications were required.

460-33095-1

Blank Contamination: Lead was detected ion the initial calibration blank analyzed on 11/06/11 at 09:41 on instrument ICP2 at a concentration estimated below the reporting limit. The lead result for associated sample SB-30 (92-94) was greater than five times the blank level. No data qualifications were required.

460-33471-1

No data quality issues were noted. No data qualifications were required.

4.0 Cyanide

K1658

No data quality issues were noted. No data qualifications were required.

460-31578-1

No data quality issues were noted. No data qualifications were required.

460-31629-1

No data quality issues were noted. No data qualifications were required.

460-31654-1

No data quality issues were noted. No data qualifications were required.

460-32732-1

No data quality issues were noted. No data qualifications were required.

460-32830-1

No data quality issues were noted. No data qualifications were required.

460-33095-1

No data quality issues were noted. No data qualifications were required.

460-33471-1

No data quality issues were noted. No data qualifications were required.

5.0 Field Duplicate Comparisons

A field duplicate sample was collected for soil sample SB-30 (78-79). Field duplicate results were evaluated using the following criteria.

Organics: The RPD must be ≤ 50% for soil/sediments, or the difference between the parent and field duplicate results must be less than the reporting limit for results less than five times the reporting limit.

Inorganics: The RPD must be ≤ 35% for soil/sediments, or the difference between the parent and field duplicate results must be less than twice the reporting limit for results less than five times the reporting limit.

The results for the parent and field duplicate sample were non-detects, with exception to those listed in Table 2 below. All RPDs were less than the maximum advisory limits or the difference criteria were met for all analytes/compounds except for those in bold text below. The nonconforming resuts were qualified "J," as estimated concentrations, because of field sampling/laboratory imprecision and sample heterogeneity.

The following notations are used in the field precision tables.

RPD: Relative percent difference

*: The difference between the parent and field duplicate results was less than the reporting limit (twice the reporting limit for metals) for results less than five times the reporting limit. Variation of this magnitude is acceptable.

µg/kg: micrograms per kilogram (ppb)

mg/kg: milligrams per kilogram (ppm)

Table 2 – Field Precision
National Grid / Equity Addendum RI Samples

Parameter	SB-30 (78-79)		Dup-1		RPD (%)

Lead	2.2	mg/kg	1.7	mg/kg	26

6.0 Notes

Positive organic and inorganic results less than the reporting limit, but greater than the method detection limit (MDL) were qualified "J," as estimated concentrations, due to increased uncertainty near the detection limit. The "J" qualifiers were maintained in the data validation.

Matrix spike and matrix spike duplicates, laboratory duplicates, and ICP serial dilutions that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

Revised July 2010

Shirley Ng [Warwick]

re-log to K2279

From: Malzone, Greg [greg.malzone@aecom.com]
Sent: Thursday, November 03, 2011 10:33 AM
To: Shirley Ng [Warwick]
Cc: Pfeiffer, Jennifer; Edward Lawler [Warwick]; Jim Stadelmaier [Warwick]; Yihai Ding [Warwick]
Subject: RE: New report posted on Mitkem website. SDG K1658 for project AECOM_NAT_EQUITY_PDI National Grid Equity Site, PDI Analytical/ -

Shirley:

We request that the 8260B volatiles analyses be performed from the refrigerated, unopened jars for samples TP-2B-1, TP-2B-2, TP-4 (3-4) and TP-4 (7-7.5).
(01) (02) (03) (04)
The analysis of these samples will be grossly beyond the USEPA holding time. The non-detect results will be rejected, and the positive results will be qualified as estimates. We also request a cost concession on these volatiles analyses because they were missed and the results will now be of limited use.

Importance: High

Greg,

The Free CN data for TP-4s are attached, I also noticed TOX data was missing in the data report too. I'm very sorry VOC was not analyzed for TP-2B-1, TP-2B-2, and both TP-4 (3-4) and TP-4 (7-7.5). We're very sorry for the oversight. We should still have unopened portion of these samples, would you like us analysis them for VOC ?

Again, we sincerely apologize for the inconvenience,

Shirley Ng

Hi Shirley:

We received the final data report for SDG K1658. The Equity TP-4 samples were analyzed for SVOCs and TAL metals. VOAs and cyanide were requested for the TP-4 samples but not done/delivered as indicated on the chain-of custody. Have these analyses been done and not reported?

Could you please check on this for us?

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : AECOM

Project: National Grid Equity Site, PDI Analytical

Laboratory Workorder / SDG #: K2279

SW846 8260C, VOC by GC-MS

I. SAMPLE RECEIPT

Please note these samples were analyzed out of holding time due to oversight. Please see e-mail attached.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times with the following exceptions:

TB-2B-1 (7-7.5) (K2279-01A) exceed by-45 Days
TB-2B-2 (7-7.5) (K2279-02A) exceed by-45 Days
TP-4 (3-4) (K2279-03A) exceed by-45 Days
TP-4 (7-7.5) (K2279-04A) exceed by-42 Days

B. Sample Analysis:

All samples were analyzed outside the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 8260C

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW5035
Soil Samples were prepared following procedures in laboratory test code: SW5030

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: V1
Instrument Type: GCMS-VOA
Description: HP5890 II / HP5972
Manufacturer: Hewlett-Packard
Model: 5890 / 5972
GC Column used: 30 m X 0.25 mm ID [1.40 um thickness] DB-624 capillary column.

Instrument Code: V10
Instrument Type: GCMS-VOA
Description: HP7890A
Manufacturer: Agilent
Model: 7890A / 5975C
GC Column used: 30 m X 0.25 mm ID [1.40 um thickness] DB-624 capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.6° C IR 50
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.9 C IR# 50
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	No present.
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.9°C IR#50
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Appendix A Glossary of Data Qualifier Codes

Appendix B Data Qualification Summaries

Appendix C Support Documentation

Executive Summary

Data validation was performed by Gregory A. Malzone of AECOM - Pittsburgh on one data report for the air and soil vapor samples collected at the Equity Former MGP Site in Brooklyn, NY. The samples were analyzed by H2M Labs, 575 Broad Hollow, Melville, NY 11747 for volatile organic compounds using USEPA Compendium Method TO-15 and helium using ASTM Method D-1946.

The following samples were collected on February 12, 2011 and submitted to H2M on February 15, 2011. The samples were assigned to H2M sample delivery group (SDG) No. AECOM126.

Table 1
Sample Submittals – 2011 Equity SVI

Field ID	H2M ID	Matrix	Date Sampled	Canister ID
AMB1	1102485-001	Ambient Air	2/12/2011	3395
IA1	1102485-002	Indoor Air	2/12/2011	3404
IA1 DUP	1102485-003	Indoor Air (QC)	2/12/2011	1622
SS1	1102485-004	Soil Vapor	2/12/2011	3406

The data were evaluated for conformance to method specifications and qualifiers were applied using the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, EPA 540/R-99-008, May 1999, as they apply to the analytical methods employed.

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, matrix spike/matrix spike duplicate (MS/MSD), laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

The data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the analytes in the media tested (i.e., air and soil vapor) with some qualifications. No data points were rejected. Completeness of 100% was achieved for this data set. This is within the goal of 90-100% and is acceptable. The data qualifier summaries are attached as Appendix B of this report. A glossary of data qualifier definitions is included in Appendix A of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

AECOM126

Blank Contamiantion (pp. V131-133): Methylene chloride was detected in method blank VBLK022111 at a concentration estimated below the reporting limit. The positive methylene chloride results for samples AMB1, IA1, IA1 DUP, and SS1 were greater than ten times the blank level. Based on professional judgment, the positive methylene chloride results for samples AMB1, IA1, IA1 DUP, and SS1 were qualified "J," as estimated concentrations, because of high bias due to laboratory contamination.

Systematic Contamination (Form Is): Acetone was detected in samples AMB1, IA1, IA1 DUP, and SS1 within this SDG. In the *National Functional* Guidelines, the USEPA identifies acetone as a common laboratory solvent and contaminant. Although acetone was not detected in the associated method blank, it was strongly suspected that the acetone results for samples AMB1, IA1, IA1 DUP, and SS1 were caused by laboratory contamination.

Laboratory Control Sample Recovery (pp. V4-V6): The LCS (LFB022111) recoveries for 1,1,2-trichloro-1,2,2,-trifluoroethane, chloroform, 1,2-dichloroethane, and bromoform were greater than the upper quality control limit of 130%. All samples were affected. The positive chloroform results for samples IA1, IA1 DUP, and SS1, and the positive 1,1,2-trichloro-1,2,2,-trifluoroethane result for sample SS1 were qualified "J," as estimated concentrations, because of high method bias. Non-detect results were not qualified on this basis.

Calibrations (pp. V99-V102): The 02/18-19/11 initial calibration relative standard deviations for naphthalene, 1,2,4-trichlorobenzene, 1,2,4,5-tetramethylbenzene, and 2-methylnaphthalene were greater than the method specification limit of 30% on instrument HP5973I. All samples were affected. The naphthalene, 1,2,4-trichlorobenzene, 1,2,4,5-tetramethylbenzene, and 2-methylnaphthalene results for samples AMB1, IA1, IA1 DUP, and SS1 were non-detect and were qualified "UJ," as estimates, because of calibration nonconformance.

Elevated Reporting Limits (V116-V117): An elevated response was observed at the lowest initial calibration level (i.e., 0.16 ppbv) for methylene chloride, acetone, isopropanol, ethanol, and propylene. The reporting limit was elevated to 2.0 ppbv. Methylene chloride, acetone, isopropanol, ethanol, and propylene results that were less than 2.0 ppbv were qualified "J," as estimated concentrations, because of the greater uncertainty below the reporting limit. The methylene chloride, acetone, isopropanol, and ethanol results for AMB1, IA1, IA1 DUP, and SS1 were positive. The results for propylene for AMB1, IA1, IA1 DUP, and SS1 were non-detect at the elevated reporting limit. Based on professional judgment, the non-detect propylene results were qualified "UJ," as estimates, because of interference with compound qualtitation.

Dilutions (Form Is): Samples IA1 and IA1 DUP required analysis at a ten-fold dilution to bring the ethanol concentration into the calibration range. Both sets of data were reported for review. The results of the ten-fold dilution analyses must be reported for ethanol and the results for undiluted analyses must be reported for all other target compounds. The 4-bromofluorobenzene surrogate recoveries were within the quality control limits for the initial and ten-fold dilution analyses. No data qualifications were required.

2.0 Helium

AECOM126

No data quality issues were noted. No data qualifications were required.

3.0 Field Duplicate Precision

A field duplicate sample was collected for sample IA1. The results for the parent and field duplicate samples were non-detects, with exception to those listed in Table 2 below. The advisory limit for RPD is 25% for air/soil gas, or the difference between the primary and field duplicate results must be less than or equal to the reporting limit for results less than five times the reporting limit. The primary and field duplicate results for acetone, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and tetrachloroethene required qualification (i.e., "J") as estimated concentrations, because of field sampling and/or laboratory imprecision and/or sample heterogeneity. See Table 2 below for details.

Table 2
Field Duplicate Precision – 2011 Equity SVI

Parameter	IA1		IA1 DUP		RPD (%)
2,3-Dimethylpentane	0.800 U	ppbv	0.200 J	ppbv	NC*

1,4-Dichlorobenzene	0.240	ppbv	0.250	ppbv	4
Indan	0.220 J	ppbv	0.310 J	ppbv	34*

RPD: Relative percent difference;

NC: RPD could not be calculated

*: The difference between the parent and field duplicate results was less than the reporting limit for results less than five times the reporting limit. Variation of this magnitude is acceptable.

4.0 Notes

Positive results less than the reporting limit (i.e., practical quantitation limit or PQL), but greater than the method detection limit (MDL) were qualified “J,” as estimated concentrations, due to increased uncertainty near the detection limit. These data qualifications were retained in this data validation.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

AECOM126 A8

H2M LABS, INC.

SDG NARRATIVE FOR VOLATILES ANALYSES
SAMPLE(S) RECEIVED: 2/15/11
SDG #: AECOM126

For Sample(s):

AMB 1
IA1
IA1 DUP
SSI

The above air sample(s) was/were analyzed for a select list of volatile organic analytes by EPA method TO-15.

All QC data and calibrations met the requirements of the method, unless discussed below, and no problems were encountered with sample analysis.

No matrix spike/matrix spike duplicate was submitted. A lab fortified blank analyzed. All percent recoveries were within QC limits except for a 134% recovery for 1,1,2-trichloro-1,2,2 trifluoroethane; a 132% recovery for chloroform, a 135 % recovery for 1,2-dichloroethane and a 141% recovery for bromoform (upper limit 130%).

1,2,4 trichlorobenzene, napthalene and 2-methylnapthalene had %RSD's greater than 30%. These analytes were not present in any samples.

Methylene chloride, acetone, ethanol, isopropanol and propylene PQL's were elevated to 2.0 ppbv due to elevated response at the 0.16 ppbv concentration level. These analytes were reported with a "J" qualifier if present less than 2.0 ppbv.

The 40ppbv calibration level in the initial calibration exhibited quenching for 2-methylnapthalene and 1-methylnapthalene. This calibration level was not included.

Samples IA1 and IA1 DUP were reanalyzed at dilutions to keep the concentration of targeted analytes within the calibration range. Both sets of data are reported

Methylene chloride was present in the method blank on 2/21/11. This analyte was flagged with the "B" qualifier in the samples associated with this blank.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

AECOM126 A3

H2M LABS, INC.

SDG NARRATIVE FOR HELIUM ANALYSES
SAMPLE(S) RECEIVED: 2/15/11
SDG #: AECOM126

For Sample(s):

SSI

The above sample(s) were was/were analyzed for helium by GC-TCD with nitrogen as carrier gas according to method ASTM-D1945-03.

The sample was collected in a canister for TO-15 analysis. The canister was pressurized, which resulted in a 1:1.5 "dilution".

No matrix spike/matrix spike duplicate was analyzed. Results for a lab fortified blank indicate good method efficiency.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Executive Summary

Overview

A data assessment was performed by Gregory A. Malzone of AECOM Pittsburgh on three data packages from TestAmerica Laboratories, Inc, TestAmerica Edison, 777 New Durham Road, Edison, NJ 08817 for the analysis of soil and groundwater samples collected from July 14, 2012 to August 11, 2012 at the Equity former MGP site.

The following analytical methods were requested on the chain-of-custody (COC) records.

Soil Samples

- Volatile Organic Compounds with Library Search for Tentatively Identified Compounds (TICs) by USEPA SW-846 Method 8260B
- Semivolatile Organic Compounds with Library Search for TICs by USEPA SW-846 Method 8270C
- Percent Solids for Dry Weight Corrections by Method SM2540 G mod.

Groundwater Samples

- Volatile Organic Compounds with Library Search for TICs by USEPA SW-846 Method 8260B
- Semivolatile Organic Compounds with Library Search for TICs by USEPA SW-846 Method 8270C
- Total Metals (Eight RCRA Metals) by USEPA SW-846 Methods 6010B and 7470A
- Total and Dissolved Iron by USEPA SW-846 Method 6010B
- Total Cyanide by USEPA SW-846 Method 9012A
- Specific Conductance by Standard Methods SM2510B
- Salinity by Standard Methods SMSM2520B

Not all samples were analyzed for all of the tests listed. Refer to the chain-of-custody records (COCs) for the specific tests that were requested. The salinity was calculated using the specific conductance measurement taken at TestAmerica Laboratories, Inc., TestAmerica Pittsburgh, 301 Alpha Drive, Pittsburgh, PA 15238. The groundwater samples for dissolved iron determinations were filtered at the TestAmerica Edison.

The data were evaluated for conformance to method specifications and qualifiers were applied using the USEPA Region II SOPs and the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, document number EPA 540/R-99-008, May 1999 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, EPA-540-R-10-011, October 2010, as they apply to the analytical methods employed.

The samples were processed and the results were reported under three sample delivery groups (SDGs). Table 1 provides a sample submittal list with the field IDs cross-referenced with the TestAmerica IDs.

Table 1 - Sample Submittals
National Grid / Equity Addendum RI Samples

Field ID	Laboratory ID	Matrix	Date Sampled
SB-31 (33-35)	460-42456-1	Soil	7/14/2012
SB-31 (38-40)	460-42456-2	Soil	7/14/2012
SB-25 (92-93)	460-42919-1	Soil	7/24/2012
SB-25 (103-105)	460-42919-2	Soil	7/24/2012
SB-26 (75-80)	460-42919-3	Soil	7/25/2012
SB-26 (88-90)	460-42919-4	Soil	7/26/2012
MW-8A	460-43466-1	Groundwater	8/11/2012
MW-8B	460-43466-2	Groundwater	8/11/2012

SB-20J	460-43466-4	Groundwater	8/11/2012

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

Inorganic data quality was evaluated by reviewing the following parameters: holding times, matrix spikes, initial calibrations, continuing calibration verification standard recoveries, contract required detection limit standard recoveries, laboratory control samples, ICP interference check sample recoveries, ICP serial dilution results, field and laboratory duplicates, laboratory blanks, and analyte quantitation.

All data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the compounds and analytes in the media tested (i.e., soil and groundwater) with the qualifications described below. Several data points were qualified because of blank contamination and method and/or instrument bias. There were several instances of elevated reporting limits caused by the dilution required to bring the compound and analyte concentrations into the calibration range and/or minimize matrix interferences. Completeness of 100% was achieved for this data set. This is within the goal of 90-100% and is acceptable.

A glossary of data qualifier definitions is included in Appendix A of this report. The data qualifier summaries are attached as Appendix B of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

460-42456-1

Blank Contamination (pp. 265-267, 276-278): Methylene chloride was detected in the method preparation blank LB3 460-120224/1-A at a concentration greater than two times the reporting limit. In the *National Functional* Guidelines the USEPA identifies methylene chloride as a common laboratory solvent and contaminant. The positive methylene chloride result for associated sample SB-31 (33-35) was less than two times the reporting limit and was qualified "U," as undetected, because of laboratory contamination.

Acetone was detected in the method preparation blank LB3 460-120224/1-A at a concentration less than two times the reporting limit. In the *National Functional* Guidelines the USEPA identifies acetone as a common laboratory solvent and contaminant. The positive acetone result for associated sample SB-31 (33-35) was less than two times the reporting limit and was qualified "U," as undetected, because of laboratory contamination.

Calibrations (pp. 130, 178, 216-218, 231-233): The 07/03/12 initial calibration average relative response factor for 1,4-dioxane was less than the advisory limit of 0.005 on instrument VOAMS5. In addition, the continuing calibration response factor for 1,4-dioxane was less than the specification limit of 0.005 on 07/19/12 at 19:46 on instrument VOAMS5. The non-detect 1,4-dioxane result for associated sample SB-31 (33-35) was qualified "UJ," as an estimate, because of poor instrument sensitivity.

The 07/33/12 initial calibration average relative response factor for 1,4-dioxane was less than the advisory limit of 0.005 on instrument VOAMS9. In addition, the continuing calibration response factor for 1,4-dioxane was less than the specification limit of 0.005 on 07/19/12 at 07:52 on instrument VOAMS9. The non-detect 1,4-dioxane result for associated sample SB-31 (38-40) was qualified "UJ," as an estimate, because of poor instrument sensitivity.

The continuing calibration percent difference for chloromethane was less than the lower quality control limit of -20% on 07/19/12 at 07:52 on instrument VOAMS9. The non-detect chloromethane result for associated sample SB-31 (33-35) was qualified "UJ," as an estimate, because of low instrument bias.

460-42919-1

Blank Contamination (pp. 236-238, 243-245, 250-252): Acetone and methylene chloride were detected in the method preparation blank MB 460-122212/5 at concentrations less than two times the reporting limits. In the *National Functional* Guidelines the USEPA identifies acetone and methylene chloride as common laboratory solvents and contaminants. The positive acetone and methylene chloride results for associated samples SB-25 (92-93), SB-25 (103-105), and SB-26 (75-80) were greater than two times the reporting limits and did not require qualification.

Acetone and methylene chloride were detected in the method preparation blank MB 460-122246/5 at concentrations less than two times the reporting limits. In the *National Functional* Guidelines the USEPA identifies acetone and methylene chloride as common laboratory solvents and contaminants. The positive acetone and methylene chloride results for associated sample SB-26 (88-90) were less than two times the reporting limits and were qualified "U," as undetected, because of laboratory contamination.

Calibrations (pp. 163, 208-210, 216-218): The 07/21/12 initial calibration average relative response factor for 1,4-dioxane was less than the advisory limit of 0.005 on instrument VOAMS12. In addition, the continuing calibration response factors for 1,4-dioxane were less than the advisory limit of 0.005 on 08/01/12 at 18:19 and 08/02/12 at 04:40 on instrument VOAMS12. The non-detect 1,4-dioxane results for associated samples SB-25 (92-93), SB-25 (103-105), SB-26 (75-80), and SB-26 (88-90) were qualified "UJ," as estimates, because of poor instrument sensitivity.

The continuing calibration percent differences for carbon disulfide and cyclohexane were less than the lower quality control limit of -20% on 08/01/12 at 18:19 on instrument VOAMS12. The positive and non-detect carbon disulfide and cyclohexane results for associated samples SB-25 (92-93), SB-25 (103-105), and SB-26 (75-80) were qualified "J" and "UJ," as estimates, because of low instrument bias.

The continuing calibration percent difference for carbon disulfide was less than the lower quality control limit of -20% on 08/02/12 at 04:40 on instrument VOAMS12. The positive carbon disulfide result for associated sample SB-26 (88-90) was qualified "J," as an estimated concentration, because of low instrument bias.

Laboratory Control Sample RPDs (pp.73-74, 77-78): The relative percent difference (RPD) between the LCS and LCSD 460-122212/3-4 recoveries for chloroethane and dichlorodifluoromethane were greater than the maximum quality control limits. The chloroethane and dichlorodifluoromethane results for associated samples SB-25 (92-93), SB-25 (103-105), and SB-26 (75-80) were non-detect and the LCS/LCSD recoveries were within the quality control limits. No data qualifications were required.

460-43466-1

Calibrations (pp. 195, 235-237, 243-245): The 08/08/12 initial calibration average relative response factor for 1,4-dioxane was less than the advisory limit of 0.005 on instrument VOAMS9. In addition, the continuing calibration response factors for 1,4-dioxane were less than the advisory limit of 0.005 on 08/15/12 at 08:47 and 08/15/12 at 20:28 on instrument VOAMS9. The non-detect 1,4-dioxane results for associated samples MW-8A, MW-8B, MW-8C, and SB-20J were qualified "UJ," as estimates, because of poor instrument sensitivity.

The continuing calibration percent difference for tetrachloride was less than the lower quality control limit of -20% on 08/15/12 at 08:47 on instrument VOAMS9. The carbon tetrachloride results for associated samples MW-8A, MW-8B, and SB-20J were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration percent differences for chloromethane and 1,2-dibromo-3-chloropropane were less than the lower quality control limit of -20% on 08/15/12 at 20:28 on instrument VOAMS9. The positive chloromethane and 1,2-dibromo-3-chloropropane results for associated sample MW-8C were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

Surrogate Recoveries/Dilutions (p. 96): Sample MW-8B required analysis at an initial ten-fold dilution to bring the ethylbenzene concentration into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required. The initial dilution elevated the reporting limits and MDLs for non-detect results.

2.0 Semivolatile Organic Compounds

460-42456-1

Calibrations (pp.414, 478, 536-538, 555-557): The initial calibration relative standard deviations (RSDs) for benzaldehyde were greater than 15% on 06/28/12 and 07/20/12 on instrument BNAMS4. The benzaldehyde, results for associated samples SB-31 (33-35) and SB-31 (38-40) were non-detect and were qualified "UJ," as estimates, because of calibration nonconformance.

The continuing calibration percent drift for hexachlorocyclopentadiene and 4,6-dinitro-2-methylphenol were less than the lower quality control limit of -20% on 07/19/12 at 02:49 on instrument BNAMS4. Sensitivity decreased with respect to the continuing calibration standard true values. The hexachlorocyclopentadiene and 4,6-dinitro-2-methylphenol results for associated sample SB-31 (33-35) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration percent difference for benzaldehyde was less than the lower quality control limit of -20% on 07/23/12 at 02:01 on instrument BNAMS4. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde result for associated sample SB-31 (38-40) was non-detect and was qualified "UJ," as an estimate, because of low instrument bias.

Laboratory Control Sample Recoveries (pp.345-346): The LCS 460-1202742-A recovery for 1,2,4,5-tetrachlorobenzene was less than the lower quality control limit, but greater than 10%. The 1,2,4,5-tetrachlorobenzene results for associated samples SB-31 (33-35) and SB-31 (38-40) were non-detect and were qualified "UJ," as estimates, because of low method bias.

Surrogate Recoveries/Dilutions (p. 344): Sample SB-31 (38-40) required analysis at an initial ten-fold dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out in this ten-fold dilution analysis and could not be used to evaluate method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in-control. No data qualifications were required. The initial dilution elevated the reporting limits and MDLs for non-detect results.

460-42919-1

Calibrations (pp.342, 398-400): The initial calibration RSD for benzaldehyde was greater than 15% on 07/19/12 on instrument BNAMS5. The benzaldehyde results for associated samples SB-25 (92-93), SB-25 (103-105), SB-26 (75-80), and SB-26 (88-90) were non-detect and were qualified "UJ," as estimates, because of calibration nonconformance.

The continuing calibration percent difference and drift for benzaldehyde and 4-nitroaniline were less than the lower quality control limit of -20% on 08/01/12 at 00:41 on instrument BNAMS5. Sensitivity decreased with respect to the continuing calibration standard true values and initial calibration average relative response factor. The benzaldehyde and 4-nitroaniline results for associated samples SB-25 (92-93), SB-25 (103-105), SB-26 (75-80), and SB-26 (88-90) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

460-43466-1

Calibrations (pp.433, 490-492): The initial calibration RSD for benzaldehyde was greater than 15% on 08/11/12 on instrument BNAMS5. In addition the continuing calibration percent difference for benzaldehyde was less than the lower quality control limit of -20% on 08/15/12 at 11:29 on instrument BNAMS5. The benzaldehyde, results for associated samples MW-8A, MW-8B, MW-8C, and SB-20J were non-detect and were qualified "UJ," as estimates, because of initial calibration nonconformance and low instrument bias.

Laboratory Control Sample Recoveries (pp.328-331): The LCS and/or LCSD (460-123929/2-3-A) recoveries for isophorone and atrazine were less than the lower quality control limits, but greater than 10%. The RPD between the LCS and LCSD recoveries for atrazine was greater than the maximum quality control limit. The isophorone and atrazine results for associated samples MW-8A, MW-8B, MW-8C, and SB-20J were non-detect and were qualified "UJ," as estimates, because of low method bias and method imprecision.

The LCSD (460-123929/3-A) recovery for caprolactam was greater than the upper quality control limit. Caprolactam was not detected in associated samples MW-8A, MW-8B, MW-8C, and SB-20J. No data qualifications were required in response to the high method bias.

Surrogate Recoveries/Dilutions (p. 327): Sample MW-8C required analysis at a 20-fold dilution to bring the naphthalene and 2-methylnaphthalene concentrations into the calibration range. The surrogates were diluted out and could not be used to evaluate method accuracy. The surrogate recoveries for the undiluted analysis of sample MW-8C were within the quality control limits. No data qualifications were required.

3.0 Trace Metals

460-43466-1

No data quality issues were noted. No data qualifications were required.

4.0 Total Cyanide

460-43466-1

Blank Contamination (p. 990): Cyanide was detected in the initial calibration blank at an estimated concentration of 0.00145 mg/L. The positive total cyanide results for associated samples MW-8A, MW-8B, and MW-8C were greater than ten times the blank level and did not require qualification.

5.0 General (Wet) Chemistry

460-43466-1

No data quality issues were noted. No data qualifications were required.

6.0 Notes

Positive organic and inorganic results less than the reporting limit, but greater than the method detection limit (MDL) were qualified “J,” as estimated concentrations, due to increased uncertainty near the detection limit. The “J” qualifiers were maintained in the data validation.

Matrix spike and matrix spike duplicates, laboratory duplicates, and ICP serial dilutions that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.7°C IR#50
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

Creator: Lysy, Susan

List Source: TestAmerica Edison

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.9°C IR#50
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

Sample pH Receipt Log

Job No. 460-43466

Sample No.	Ammonia (pH<2)	COD (pH<2)	Nitrate Nitrite (pH<2)	*Metals (pH<2)	Pest (pH 5-9)	PHC (pH<2)	Phenols (pH<2)	Sulfide (pH>9)	TKN (pH<2)	TOC (pH<2)	Total Cyanide (pH>12)	Total Phos (pH<2)	Other
1				<2							>12		
2				<2							>12		
3				<2							>12		
4				<2									

If pH adjustments are required record the information below:

Sample No(s). adjusted: _____

Preservative Name/Conc.: _____ Volume of Preservative used (ml): _____

Lot # of Preservative: _____ Expiration Date: _____

Project Manager and the Department Manager should be notified about the samples which were pH adjusted.

** Samples for Metal analysis which are out of compliance must be acidified at least 24 hours prior to analysis.*

Initials: SR Date: 8/14/12

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.4°C IR#50
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

Executive Summary

Overview

Data validation was performed by Gregory A. Malzone of AECOM Pittsburgh on one data package from Accutest Laboratories New England, 495 Tech Center West, Building 1, Marlborough, MA 01752 for the analysis of groundwater samples collected on July 31-August 1, 2013 at the Equity Site.

The following analytical methods were requested on the chain-of-custody (CoC) records:

- Volatile Organic Compounds by USEPA SW-846 Method 8260B,
- Semivolatile Organic Compounds by USEPA SW-846 Method 8270C, and
- Total Cyanide by USEPA SW-846 Method 9012A.

The data were evaluated for conformance to method specifications and qualifiers were applied using the USEPA Region II SOPs and the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, document number EPA 540/R-99-008, May 1999 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, EPA-540-R-10-011, October 2010, as they apply to the analytical methods employed.

The samples were processed and the results were reported under one sample delivery group (SDG). Table 1 provides a sample submittal list.

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, laboratory control standards (LCSs), matrix spikes, laboratory and field blanks, laboratory duplicates, compound identification, and compound quantitation.

Inorganic data quality was evaluated by reviewing the following parameters: holding times, matrix spikes, initial calibrations, continuing calibration verification standard recoveries, laboratory control samples, laboratory duplicates, laboratory blanks, and analyte quantitation.

The 14 non-detect 2-chloroethyl vinyl ether results were rejected due to matrix spike recoveries that were less than 10% because acid-preservation breaks down this compound. The 14 semivolatile organic acid compounds (i.e., phenols) for samples MW17C-73113 and MW17D-73113 were rejected because the surrogate recoveries were less than 10%, which is an indication of severe matrix effects. All other data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the compounds and analytes in the media tested (i.e. groundwater) with the qualifications described below. Several data points were qualified because of low instrument bias and matrix effects and/or sample heterogeneity. Completeness of 96.9% was achieved for this data set. This is within the goal of 90-100% and is acceptable.

A glossary of data qualifier definitions is included in Appendix A of this report. The data qualifier summaries are attached as Appendix B of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

MC23250

Dilutions: Sample MW19B-73113 required analysis at a secondary 100-fold dilution to bring the benzene and ethylbenzene concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required.

Sample MW16C-080113 required analysis at a secondary 50-fold dilution to bring the benzene and trichloroethene concentrations into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required.

Calibrations (pp. 135, 139): The continuing calibration percent drift for acetone was less than the lower quality control limit of -20% on 08/07/13 at 11:57 on instrument GCMSV. Sensitivity decreased with respect to the initial calibration average relative response factor. The acetone results for associated samples MW19B-73113, MW17C-73113, MW17A-73113 and Trip Blank were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration percent drift for acetone was greater than the upper quality control limit of 20% on 08/08/13 at 11:48 on instrument GCMSV. Sensitivity increased with respect to the initial calibration average relative response factor. The acetone results for associated samples MW19C-73113, MW19A-73113, MW17B-73113, MW17C-73113, MW18C-73113, MW18B-73113, MW18A-73113, MW16A-080113, MW16B-080113 and MW16C-080113 were non-detect did not require qualification in response to the high instrument bias.

Matrix Spike Recoveries and RPDs (pp. 116-119): The MW17C-73113 MS/MSD and MW18C-73113 MS/MSD recoveries for 2-chloroethyl vinyl ether did not recover (0%) All aqueous field samples and aqueous QC samples for volatiles were acid-preserved. Acid breaks down 2-chloroethyl vinyl ether. The 2-chloroethyl vinyl ether results for all samples were non-detect and was qualified "R," as rejected, because of severe matrix effects.

One or more of the MW17C-73113 MS/MSD and MW18C-73113 MS/MSD recoveries for acetone were less than the lower advisory limit, but greater than 10%. The acetone results for samples MW17C-73113 and MW18C-73113 were non-detect and were qualified "UJ," as estimates, because of low bias, attributable to matrix effects.

The MW18C-73113 MS recovery for carbon tetrachloride was greater the upper advisory limit. The carbon tetrachloride result for sample MW18C-73113 was non-detect and did not require qualification in response to the high bias attributable to matrix effects.

Laboratory Control Sample Recoveries (pp. 112-115): One or more LCS/LCSD (MSV838-BS/BSD) recoveries for acetone and acrolein were greater than the upper quality control limits. The acetone and acrolein results for associated samples MW19B-73113, MW17C-73113, MW17A-73113 and Trip Blank were non-detect and did not require qualification in response to the high method bias.

One or more LCS/LCSD (MSV840-BS/BSD) recoveries for carbon tetrachloride and acrolein were greater than the upper quality control limits. The carbon tetrachloride and acrolein results for associated samples MW19C-73113, MW19A-73113, MW17B-73113, MW17C-73113, MW18C-73113, MW18B-73113, MW18A-73113, MW16A-080113, MW16B-080113 and MW16C-080113 were non-detect did not require qualification in response to the high method bias.

The LCS/LCSD (MSV838-BS/BSD) and LCS/LCSD (MSV840-BS/BSD) recoveries for 2-chloroethyl vinyl ether were less than the lower quality control limits, but greater than 10%. All 2-chloroethyl vinyl ether results were

rejected because of poor matrix spike recoveries. See above. All aqueous field samples and aqueous QC samples for volatiles were acid-preserved. Acid breaks down 2-chloroethyl vinyl ether. All field sample and aqueous QC sample 2-chloroethyl vinyl ether results were non-detect and were qualified “R,” as rejected, because of matrix effects.

2.0 Semivolatile Organic Compounds

MC23250

Surrogate Recoveries/Dilutions (p.380): The 2,4,6-tribromophenol and terphenyl-d14 surrogate recoveries for sample MW19B-73113 were greater than the upper quality control limits. The *USEPA National Functional Guidelines* permit one nonconforming surrogate recovery per fraction (i.e., acid or base/neutral) so long as the recoveries are greater than 10%. No data qualifications were required.

Sample MW19B-73113 required analysis at a secondary 50-fold dilution to bring the phenol and naphthalene concentrations into the calibration range. The surrogates were diluted out and could not be used to assess method accuracy. There were sufficient, acceptable quality control data to demonstrate that the analytical process was in control. No data qualifications were required.

The phenol-d5, 2-fluorophenol and 2,4,6-tribromophenol surrogate recoveries for sample MW17C-73113 were less than 10%. The base/neutral surrogate recoveries were within the quality control limits. All organic acids (i.e., phenols) were non-detect for sample MW17C-73113 were qualified "R," as rejected because of severe matrix effects.

The 2-fluorophenol surrogate recovery for sample MW17D-73113 was less than 10%. The phenol-d5 surrogate recovery was just 11%. The base/neutral surrogate recoveries were within the quality control limits. All organic acids (i.e., phenols) were non-detect for sample MW17D-73113 and were qualified "R," as rejected because of severe matrix effects.

Sample MW16C-080113 required analysis at a secondary 50-fold dilution to bring the naphthalene concentration into the calibration range. The surrogates were diluted out and could not be used to assess method accuracy. There were sufficient, acceptable quality control data to demonstrate that the analytical process was in control. No data qualifications were required.

Calibrations (pp. 399-404): The continuing calibration percent difference for bis(2-chloroisopropyl)ether was less than the lower quality control limit of -20% on 08/13/13 at 15:19 on instrument GCMSR. Sensitivity decreased with respect to the initial calibration average relative response factor. The bis(2-chloroisopropyl)ether results for associated samples MW16A-080113, MW16B-080113, MW16C-080113, MW17A-73113, MW17B-73113, MW17C-73113, MW17D-73113, MW18A-73113, MW18B-73113, MW18C-73113, MW19A-73113, MW19B-73113 and MW19C-73113 were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

3.0 Total Cyanide

MC23250

No data quality issues were noted. No data qualifications were required.

4.0 Notes

Positive organic and inorganic results less than the reporting limit, but greater than the method detection limit (MDL) were qualified “J,” as estimated concentrations, due to increased uncertainty near the detection limit. The “J” qualifiers were maintained in the data validation.

Matrix spike and matrix spike duplicates and laboratory duplicates that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

ACCUTEST LABORATORIES

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC23250 **Client:** AECOM **Immediate Client Services Action Required:** No

Date / Time Received: 8/2/2013 **Delivery Method:** **Client Service Action Required at Login:** No

Project: EQUITY **No. Coolers:** 4 **Airbill #'s:**

Cooler Security	Y or N		Y or N
1. Custody Seals Present:	☑ ☐	3. COC Present:	☑ ☐
2. Custody Seals Intact:	☑ ☐	4. Smpl Dates/Time OK	☑ ☐

Cooler Temperature	Y or N
1. Temp criteria achieved:	☑ ☐
2. Cooler temp verification:	Infared gun
3. Cooler media:	Ice (bag)

Quality Control Preservation	Y or N	N/A
1. Trip Blank present / cooler:	☑ ☐	☐
2. Trip Blank listed on COC:	☑ ☐	☐
3. Samples preserved properly:	☑ ☐	
4. VOCs headspace free:	☑ ☐	☐

Sample Integrity - Documentation	Y or N
1. Sample labels present on bottles:	☑ ☐
2. Container labeling complete:	☑ ☐
3. Sample container label / COC agree:	☑ ☐

Sample Integrity - Condition	Y or N
1. Sample recvd within HT:	☑ ☐
2. All containers accounted for:	☑ ☐
3. Condition of sample:	Intact

Sample Integrity - Instructions	Y or N	N/A
1. Analysis requested is clear:	☑ ☐	
2. Bottles received for unspecified tests	☐ ☑	
3. Sufficient volume recvd for analysis:	☑ ☐	
4. Compositing instructions clear:	☐ ☐	☑
5. Filtering instructions clear:	☐ ☐	☑

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client:	AECOM	**Job No**	MC23250
Site:	METAMAW: Equity MGP, 254 Maspeth Avenue, Brooklyn, NY	**Report Date**	8/21/2013 2:45:59 PM

14 Sample(s) and 1 Trip Blank(s) were collected on between 07/31/2013 and 08/01/2013 and were received at Accutest on 08/02/2013 properly preserved, at 2.3 Deg. C and intact. These Samples received an Accutest job number of MC23250. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix AQ **Batch ID:** MSV838

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC23250-4MS, MC23250-4MSD were used as the QC samples indicated.
- MSV838-BS Recovery(s) for 2-Chloroethyl vinyl ether, Acetone are outside control limits. Blank Spike meets program technical requirements.
- Matrix Spike Recovery(s) for 2-Chloroethyl vinyl ether, Acrolein are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- Matrix Spike Duplicate Recovery(s) for Acetone, Acrolein, 2-Chloroethyl vinyl ether are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- RPD(s) for MSD for 2-Chloroethyl vinyl ether are outside control limits for sample MC23250-4MSD. High RPD due to possible matrix interference and/or sample non-homogeneity.
- MSV838-BS/BSD for Acrolein: Outside control limits. Associated samples are non-detect for this compound.
- MSV838-BSD Recovery(s) for 2-Chloroethyl vinyl ether are outside control limits. Blank Spike meets program technical requirements.
- Initial calibration verification stdanard MSV832-ICV832 for acetone exceeded 50% Difference (response biased high). Associated samples are non-detect for these compounds.

Matrix AQ **Batch ID:** MSV840

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC23250-9MS, MC23250-9MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- MSV840-BS Recovery(s) for 1,1,1-Trichloroethane, 2-Chloroethyl vinyl ether are outside control limits. Blank Spike meets program technical requirements.
- MSV840-BSD Recovery(s) for 2-Chloroethyl vinyl ether are outside control limits. Blank Spike meets program technical requirements.
- Matrix Spike Recovery(s) for 2-Chloroethyl vinyl ether, Acetone, Acrolein, Carbon tetrachloride are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- Matrix Spike Duplicate Recovery(s) for 2-Chloroethyl vinyl ether, Acetone, Acrolein are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- MSV840-BS for Acrolein, Carbon tetrachloride: Outside control limits. Associated samples are non-detect for this compound.
- MSV840-BSD for Acrolein: Outside control limits. Associated samples are non-detect for this compound.

Extractables by GCMS By Method SW846 8270C

Matrix AQ	Batch ID: OP34263

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) MC23250-4MS, MC23250-4MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Matrix Spike Recovery(s) for 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 2-Chlorophenol, 2-Methylphenol, 3&4-Methylphenol, 4-Chloro-3-methyl phenol, Pentachlorophenol, Phenol are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- Matrix Spike Duplicate Recovery(s) for 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 2-Chlorophenol, 2-Nitrophenol, 3&4-Methylphenol, 4-Chloro-3-methyl phenol, 4-Nitrophenol, Pentachlorophenol, Phenol are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- MC23250-14 for 2-Fluorophenol, Phenol-d5, 2,4,6-Tribromophenol: Outside control limits due to dilution.
- MC23250-1 for 2,4,6-Tribromophenol, Terphenyl-d14: Outside control limits due to possible matrix interference.
- MC23250-6 for Phenol-d5, 2-Fluorophenol: Outside control limits due to possible matrix interference. Confirmed by re-extraction/reanalysis.
- MC23250-4, OP34263-MS for 2-Fluorophenol, Phenol-d5, 2,4,6-Tribromophenol: Outside control limits due to possible matrix interfernce. Confirmed by MS/MSD.
- OP34263-MSD for Terphenyl-d14: Outside control limits due to possible matrix interference.
- MC23250-1 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

Matrix AQ	Batch ID: OP34402

- MC23250-6: Sample re-extracted outside of holding time
- MC23250-6: Confirmation run.
- MC23250-6 for 2-Fluorophenol, Phenol-d5: Outside control limits due to possible matrix interference. Confirmed by re-extraction/reanalysis.

Wet Chemistry By Method SW846 1020

Matrix AQ	Batch ID: GN43903

- Sample(s) MC23250-16DUP were used as the QC samples for Ignitability (Flashpoint).

Wet Chemistry By Method SW846 9012

Matrix AQ	Batch ID: GP16433

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC23250-4DUP, MC23250-4MS were used as the QC samples for Cyanide.

Wet Chemistry By Method SW846 CHAP7

Matrix AQ	Batch ID: GP16437

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC23250-16DUP, MC23250-16MS were used as the QC samples for Cyanide Reactivity.

Matrix AQ	Batch ID: GP16438

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC23250-16DUP, MC23250-16MS were used as the QC samples for Sulfide Reactivity.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC23250).

Executive Summary

Overview

A data assessment was performed by Gregory A. Malzone of AECOM Pittsburgh on one data package from TestAmerica Laboratories, Inc., 777 New Durham Road, Edison, NJ 08817 for the analysis of groundwater samples collected on February 4-6, 2013 at the Equity Site.

The following analytical methods were requested on the chain-of-custody (COC) records:

- Volatile Organic Compounds by USEPA SW-846 Method 8260B with Tentatively Identified Compounds (TICs), by Library Search.,
- Semivolatile Organic Compounds by USEPA SW-846 Method 8270C with TICs, by Library Search.,
- Trace RCRA Metals by USEPA SW-846 Methods 6010B and 7470A, and
- Total Cyanide by USEPA SW-846 Method 9012A.

The data were evaluated for conformance to method specifications and qualifiers were applied using the USEPA Region II SOPs and the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, document number EPA 540/R-99-008, May 1999 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, EPA-540-R-10-011, October 2010, as they apply to the analytical methods employed. Field duplicate RPD review and applicable control limits were taken from the USEPA Region I Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses, December 1996.

The samples were processed and the results were reported under one sample delivery group (SDG). Table 1 provides a sample submittal list.

MW-9C	460-50516-1	Groundwater	2/6/2013

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate

recoveries, laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

Inorganic data quality was evaluated by reviewing the following parameters: holding times, matrix spikes, initial calibrations, continuing calibration verification standard recoveries, contract required detection limit standard recoveries, laboratory control samples, ICP interference check sample recoveries, ICP serial dilution results, field and laboratory duplicates, laboratory blanks, and analyte quantitation.

All data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the compounds and analytes in the media tested (i.e. groundwater) with the qualifications described below. Several data points were qualified because of low method and/or instrument bias and matrix effects and/or sample heterogeneity. There were instances of elevated reporting limits caused by the dilution required to bring the compound or analyte concentration(s) into the calibration range and/or to minimize matrix interferences. Completeness of 100% was achieved for this data set. This is within the goal of 90-100% and is acceptable.

A glossary of data qualifier definitions is included in Appendix A of this report. The data qualifier summaries are attached as Appendix B of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

460-50461-1

Dilutions: Sample MW-11C required analysis at an initial two-fold dilution to bring the benzene concentration into the calibration range. The surrogate recoveries were within the quality control limits. No data qualifications were required. The initial dilution elevated the reporting and method detection limits for non-detect results.

Calibrations (pp. 363-365, 371-373, 379-381): The continuing calibration percent differences (%Ds) for bromoform, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene were less than the lower quality control limit of -20% on 02/12/13 at 05:14 on instrument VOAMS2. Sensitivity decreased with respect to the initial calibration average relative response factors. The bromoform, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene results for associated samples MW-9C and MW-10C were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration %D for Freon-TF was less than the lower quality control limit of -20% on 02/12/13 at 18:01 on instrument VOAMS2. Sensitivity decreased with respect to the initial calibration average relative response factor. The Freon-TF results for associated samples MW-11C, MW-12C, and MW-11B were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration relative response factor for 1,4-dioxane was less than the advisory validation limit of 0.005 on 02/13/13 at 03:49 on instrument VOAMS2. The 1,4-dioxane results for associated samples MW-12B and DUPE 2-4 were non-detect and were qualified "UJ," as estimates, because of poor instrument sensitivity.

Matrix Spike Recoveries and RPDs (pp. 155-158, 161-164): The MW-10C MS/MSD recoveries for 1,2,3-trichlorobenzene were less than the lower advisory limit, but greater than 10%. The 1,2,3-trichlorobenzene result for sample MW-10C was non-detect and was qualified "UJ," as an estimate, because of low bias, attributable to matrix effects.

The MW-11C MS/MSD recoveries for trans-1,2-dichloroethene, trans-1,3-dichloropropene, and cis-1,3-dichloropropene were less than the lower advisory limit, but greater than 10%. The positive and non-detect trans-1,2-dichloroethene, trans-1,3-dichloropropene, and cis-1,3-dichloropropene results for sample MW-11C were qualified "J/UJ," as estimates, because of low bias, attributable to matrix effects.

2.0 Semivolatile Organic Compounds

460-50461-1

Calibrations (pp. 708, 777, 830, 962-964, 982-984, 992-994, 1000-1002): The initial calibration relative standard deviations (RSDs) for benzaldehyde were greater than 15% on 02/11/13 and 02/15/13 on instrument BNAMS11 and 02/12/13 on instrument BNAMS5. The benzaldehyde results for all groundwater samples were non-detect and were qualified "UJ," as estimates, because of calibration nonconformance.

The continuing calibration %Ds for benzaldehyde and 4-nitrophenol were less than the lower quality control limit of -20% on 02/12/12 at 17:18 on instrument BNAMS11. Sensitivity decreased with respect to the initial calibration average relative response factors. The benzaldehyde and 4-nitrophenol results for associated samples MW-12B, MW-11B, and DUPE 2-4 were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration %Ds for benzaldehyde, 3,3'-dichlorobenzidine, and 2,2'-oxybis(1-chloroproane) were less than the lower quality control limit of -20% on 02/13/12 at 19:24 on instrument BNAMS11. Sensitivity decreased with respect to the initial calibration average relative response factors. The benzaldehyde, 3,3'-dichlorobenzidine, and 2,2'-oxybis(1-chloropropane) results for associated sample MW-12C were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration %Ds for benzaldehyde, 2-nitroaniline, 4-nitrophenol, and 2,2'-oxybis(1-chloroproane) were less than the lower quality control limit of -20% on 02/14/12 at 03:48 on instrument BNAMS11. Sensitivity decreased with respect to the initial calibration average relative response factors. The benzaldehyde, 2-nitroaniline, 4-nitrophenol, and 2,2'-oxybis(1-chloroproane) results for associated sample MW-11C were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration %D for benzaldehyde was less than the lower quality control limit of -20% on 02/16/12 at 11:00 on instrument BNAMS11. Sensitivity decreased with respect to the initial calibration average relative response factors. The benzaldehyde result for associated sample MW-9C was non-detect and was qualified "UJ," as an estimate, because of low instrument bias.

Laboratory Control Sample Recoveries (pp. 497-506): The LCS/LCSD (400-146673/2-A and 3-A) recoveries for 2,2'-oxybis(1-chloroproane) were less than the lower quality control limit, but greater than 10%. The 2,2'-oxybis(1-chloroproane) result for associated sample MW-9C was non-detect and was qualified "UJ," as an estimate, because of low method bias.

Matrix Spike Recoveries and RPDs (pp. 507-510): MW-10C MS/MSD recoveries 3,3'-dichlorobenzidine were less than the lower advisory limit, but greater than 10%. The 3,3'-dichlorobenzidine result for associated sample MW-10C was non-detect and was qualified "UJ," as an estimate, because of low bias attributable to matrix effects.

3.0 Trace Metals

460-50461-1

No data quality issues were noted. No data qualifications were required.

4.0 Total Cyanide

460-50461-1

Matrix Spike Recovery (pp. 1972-1973): The MW-10C MS/MSD and MW-9C MS/MSD recoveries for total cyanide were less than the lower advisory limit of 90%, and less than the validation advisory limit of 75%, but greater than 30%. The RPD between the MW-10C MS and MSD recoveries was greater than the maximum advisory limit of 10%. The positive and non-detect total cyanide results for associated samples MW-9C, MW-10C, MW-11B, MW-11C, MW-12B, DUPE 2-4, and MW-12C were qualified “J/UJ,” as estimates, because of low bias and imprecision, attributable to matrix effects..

5.0 Field Duplicate Comparisons

A field duplicate sample was collected at groundwater well MW-12B. Field duplicate results were evaluated using the following criteria.

Organics: The RPD must be ≤ 30% for groundwater or the difference between the parent and field duplicate results must be less than the reporting limit for results less than five times the reporting limit.

Inorganics: The RPD must be ≤ 20% for groundwater or the difference between the parent and field duplicate results must be less than twice the reporting limit for results less than five times the reporting limit.

The results for the parent and field duplicate sample were non-detects, with exception to those listed in Table 2 below. All RPDs were less than the maximum advisory limit, field sampling/laboratory precision and sample homogeneity were acceptable, no data qualifications were required.

The following notations are used in the field precision table.

RPD: Relative percent difference

µg/L: micrograms per liter (ppb)

mg/L: milligrams per liter (ppm)

Table 2 – Field Precision
National Grid / Equity Groundwater Samples

Parameter	MW-12B		DUPE 2-4		RPD (%)
Vinyl chloride	0.32 J	µg/L	0.33 J	µg/L	3
Carbon disulfide	2.5	µg/L	2.3	µg/L	8
1,1-Dichloroethane	0.20 J	µg/L	0.17 J	µg/L	16
cis-1,2-Dichloroethene	0.46 J	µg/L	0.45 J	µg/L	2
Benzene	86	µg/L	88	µg/L	2
Ethylbenzene	0.46 J	µg/L	0.54 J	µg/L	16
Isopropylbenzene	0.11 J	µg/L	0.11 J	µg/L	0
MTBE	0.17 J	µg/L	0.17 J	µg/L	0
Toluene	0.37 J	µg/L	0.37 J	µg/L	0
Tetrachloroethene	0.41 J	µg/L	0.37 J	µg/L	10
Barium	357	µg/L	362	µg/L	1
Total Cyanide	0.023	mg/L	0.026	mg/L	12

6.0 Notes

Positive organic and inorganic results less than the reporting limit, but greater than the method detection limit (MDL) were qualified “J,” as estimated concentrations, due to increased uncertainty near the detection limit. The “J” qualifiers were maintained in the data validation.

Matrix spike and matrix spike duplicates, laboratory duplicates, and ICP serial dilutions that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

Appendix B

Executive Summary

Overview

A data assessment was performed by Gregory A. Malzone of AECOM Pittsburgh on four data packages from TestAmerica Laboratories, Inc, TestAmerica Edison, 777 New Durham Road, Edison, NJ 08817 for the analysis of soil samples collected January 9-22, 2013 at the Equity former MGP site.

The following analytical methods were requested on the chain-of-custody (COC) records.

- Volatile Organic Compounds with Library Search for Tentatively Identified Compounds (TICs) by USEPA SW-846 Method 8260B
- Semivolatile Organic Compounds with Library Search for TICs by USEPA SW-846 Method 8270C
- Percent Solids for Dry Weight Corrections by Method SM2540 G mod.

The data were evaluated for conformance to method specifications and qualifiers were applied using the USEPA Region II SOPs and the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, document number EPA 540/R-99-008, May 1999, as they apply to the analytical methods employed. Field duplicate RPD review and applicable acceptance limits were taken from the *USEPA Region I Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses*, December 1996.

The samples were processed and the results were reported under four sample delivery groups (SDGs). Table 1 provides a sample submittal list with the field IDs cross-referenced with the TestAmerica IDs.

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate

recoveries, laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

Two non-detect acetone results were rejected because of poor instrument sensitivity. All other data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the compounds and analytes in the media tested (i.e., soil) with the qualifications described below. Several data points were qualified because of blank contamination and method and/or instrument bias. There were several instances of elevated reporting limits caused by the dilution required to bring the compound concentrations into the calibration range and/or minimize matrix interferences. Completeness of 99.9% was achieved for this data set. This is within the goal of 90-100% and is acceptable.

A glossary of data qualifier definitions is included in Appendix A of this report. The data qualifier summaries are attached as Appendix B of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

460-49238-1

Blank Contamination (pp.125-126): Methylene chloride was detected in the method preparation blank MB 460-143364/5 at a concentration less than two times the reporting limit. In the *National Functional* Guidelines the USEPA identifies methylene chloride as a common laboratory solvent and contaminant. The positive methylene chloride result for associated sample SB-32 (64-66) was less than the reporting limit and was qualified "U," at the reporting limit as undetected, because of laboratory contamination.

Acetone was detected in the method preparation blank MB 460-143364/5 at a concentration less than two times the reporting limit. In the *National Functional* Guidelines the USEPA identifies acetone as a common laboratory solvent and contaminant. The positive acetone result for associated sample SB-32 (64-66) was greater than two times the reporting limit and did not require qualification.

Calibrations (pp.58-63, 108-110): The 01/13/13 initial calibration average relative response factor for 1,4-dioxane was less than the advisory limit of 0.005 on instrument VOAMS9. In addition, the continuing calibration response factor for 1,4-dioxane was less than the specification limit of 0.005 on 01/16/13 at 06:23 on instrument VOAMS9. The non-detect 1,4-dioxane result for associated sample SB-32 (64-66) was qualified "UJ," as an estimate, because of poor instrument sensitivity.

The 01/13/13 initial calibration average relative response factor for 2-butanone was less than the specification limit of 0.05 on instrument VOAMS9. In addition, the continuing calibration response factor for 2-butanone was less than the specification limit of 0.05 on 01/16/13 at 06:23 on instrument VOAMS9. The 2-butanone result for associated sample SB-32 (64-66) was positive and was qualified "J," as an estimated concentration, because of poor instrument sensitivity.

The continuing calibration percent differences/drifts for trans-1,3-dichloropropene and bromoform were less than the lower quality control limit of -20% on 01/16/13 at 06:23 on instrument VOAMS9. The non-detect trans-1,3-dichloropropene and bromoform results for associated sample SB-32 (64-66) were qualified "UJ," as estimates, because of low instrument bias.

Laboratory Control Sample RPDs (pp.40-43): The relative percent difference (RPD) between the LCS and LCSD 460-143364/3&4 recoveries for acetone was greater than the maximum quality control limit. The positive acetone result for associated sample SB-32 (64-66) was qualified "J," as an estimated concentration, because of method imprecision.

460-49385-1

Blank Contamination (pp. 329-331): Acetone and methylene chloride were detected in the method preparation blank MB 460-143173/5 at concentrations less than two times the reporting limits. In the *National Functional* Guidelines the USEPA identifies acetone and methylene chloride as common laboratory solvents and contaminants. The positive acetone and methylene chloride results for associated samples SB-28 (33-35), SB-28 (65-66), and SB-27 (90-92) were less than two times the reporting limits and were qualified "U," as undetected at the reporting limits, because of laboratory contamination.

Surrogate Recoveries/Dilutions (p. 82): Sample SB-27 (80-85) required analysis using the medium-level soil (MLS) methanol extraction technique at a 2500-fold initial dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out and could not be used to assess method accuracy. There were sufficient, acceptable quality control check results to demonstrate that the analytical process was in control. No data qualifications were necessary based on professional judgment. The initial dilution elevated the reporting limits and MDLs for non-detect results.

Calibrations (pp. 174-179, 217-222, 297-299, 305-307): The 01/09/13 initial calibration average relative response factor for 1,4-dioxane was less than the advisory limit of 0.005 on instrument VOAMS12. In addition, the continuing calibration response factor for 1,4-dioxane was less than the specification limit of 0.005 on 01/14/13 at 20:06 on instrument VOAMS12. The non-detect 1,4-dioxane results for associated samples SB-28 (33-35), SB-28 (65-66), and SB-27 (90-92) were qualified "UJ," as estimates, because of poor instrument sensitivity.

The continuing calibration response factor for 1,4-dioxane was less than the specification limit of 0.005 on 01/16/13 at 07:57 on instrument VOAMS4. The non-detect 1,4-dioxane result for associated sample SB-27 (80-85) was qualified "UJ," as an estimate, because of poor instrument sensitivity.

The 01/10/13 MLS initial calibration average relative response factor for acetone was less than the specification limit of 0.05 on instrument VOAMS4. The non-detect acetone result for associated sample SB-27 (80-85) was qualified "R," as rejected, because of poor instrument sensitivity.

The 01/09/13 initial calibration average relative response factor for 2-butanone was less than the specification limit of 0.05 on instrument VOAMS12. In addition, the continuing calibration response factor for 2-butanone was less than the specification limit of 0.05 on 01/14/13 at 20:06 on instrument VOAMS12. The positive 2-butanone results for associated samples SB-28 (33-35), SB-28 (65-66), and SB-27 (90-92) were qualified "J," as estimated concentrations, because of poor instrument sensitivity.

460-49593-1

Blank Contamination (pp. 253-255): Acetone and methylene chloride were detected in the method preparation blank MB 460-143884/5 at concentrations less than two times the reporting limits. In the *National Functional* Guidelines the USEPA identifies acetone and methylene chloride as common laboratory solvents and contaminants. The positive acetone and methylene chloride results for associated sample SB-33 (50-54) were less than two times the reporting limits and were qualified "U," as undetected at the reporting limits, because of laboratory contamination.

Surrogate Recoveries/Dilutions (p. 59): Sample SB-33 (35-36) required analysis using the medium-level soil (MLS) methanol extraction technique at a 2000-fold initial dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out and could not be used to assess method accuracy. There were sufficient, acceptable quality control check results to demonstrate that the analytical process was in control. No data qualifications were necessary based on professional judgment. The initial dilution elevated the reporting limits and MDLs for non-detect results.

Holding Time/Sample Preservation (Case Narrative and COC): Sample SB-33 (50-54) was preserved for low-level volatiles analysis 3.5 hours beyond the USEPA 48-hour holding time for sample preservation. Low-level samples must be frozen and SB-33 (50-54) was not solid upon receipt at the lab. The service center does not freeze them in route to the laboratory. All positive and non-detect volatile compound results for sample SB-33 (35-36) were qualified "J/UJ," as estimates, due to low bias because the holding time was exceeded.

Calibrations (pp. 221-223, 229-231): The 01/22/13 initial calibration average relative response factor for 1,4-dioxane was less than the advisory limit of 0.005 on instrument VOAMS4. In addition, the continuing calibration response factor for 1,4-dioxane was less than the advisory limit of 0.005 on 01/23/13 at 09:22 on instrument VOAMS4. The 1,4-dioxane result for associated sample SB-33 (35-36) was non-detect and was qualified "UJ," as an estimate, because of poor instrument sensitivity.

The 01/12/13 initial calibration average relative response factor for 1,4-dioxane was less than the advisory limit of 0.005 on instrument VOAMS9. In addition, the continuing calibration response factor for 1,4-dioxane was less than the advisory limit of 0.005 on 01/18/13 at 19:53 on instrument VOAMS9. The 1,4-dioxane result for associated sample SB-33 (50-54) was non-detect and was qualified "UJ," as an estimate, because of poor instrument sensitivity.

The 01/23/13 initial calibration average relative response factor for acetone was less than the advisory limit of 0.05 on instrument VOAMS4. In addition, the continuing calibration response factor for acetone was less than the advisory limit of 0.05 on 01/23/13 at 09:22 on instrument VOAMS4. The acetone result for associated sample SB-33 (35-36) was non-detect and was qualified "R," as rejected, because of poor instrument sensitivity.

The 01/12/13 initial calibration average relative response factor for 2-butanone was less than the advisory limit of 0.05 on instrument VOAMS9. In addition, the continuing calibration response factor for 2-butanone was less than the advisory limit of 0.05 on 01/18/13 at 19:53 on instrument VOAMS9. The 2-butanone result for associated sample SB-33 (50-54) was positive and was qualified "J," as an estimated concentration, because of poor instrument sensitivity.

The continuing calibration percent difference for bromoform was less than the lower quality control limit of -20% on 01/23/13 at 09:22 on instrument VOAMS4. The bromoform result for associated sample SB-33 (35-36) was non-detect and was qualified "UJ," as an estimate, because of low instrument bias.

The continuing calibration percent differences/drift for carbon tetrachloride, trans-1,3-dichloropropene, and bromoform were less than the lower quality control limit of -20% on 01/18/13 at 19:53 on instrument VOAMS9. The carbon tetrachloride, trans-1,3-dichloropropene, and bromoform results for associated sample SB-33 (50-54) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

460-49827-1

Blank Contamination (pp.225-226): Acetone was detected in the method preparation blank MB 460-145061/6 at a concentration less than two times the reporting limit. In the *National Functional* Guidelines the USEPA identifies acetone as a common laboratory solvent and contaminant. The positive acetone results for associated samples SB-34 (35-36), DUPE-1-13, and SB-35 (35-36) were less than the reporting limit and were qualified "U," at the reporting limit as undetected, because of laboratory contamination. The positive acetone result for associated samples SB-34 (97-98) and SB-35 (44-45) were greater than two times the reporting limit and did not require qualification.

Holding Time/Sample Preservation (Case Narrative and COC): Samples SB-34 (35-36), SB-34 (97-98), and DUPE-1-13 were preserved for low-level volatiles analysis 6.5-8 hours beyond the USEPA 48-hour holding time for sample preservation. Low-level samples must be frozen and SB-34 (35-36), SB-34 (97-98), and DUPE-1-13 were not solid upon receipt at the lab. The service center does not freeze them in route to the laboratory. All positive and non-detect volatile compound results for samples SB-34 (35-36), SB-34 (97-98), and DUPE-1-13 were qualified "J/UJ," as estimates, due to low bias because the holding time was exceeded.

Calibrations (pp. 209-211): The 01/28/13 initial calibration average relative response factor for 1,4-dioxane was less than the advisory limit of 0.005 on instrument VOAMS12. In addition, the continuing calibration response factor for 1,4-dioxane was less than the advisory limit of 0.005 on 01/29/13 at 07:12 on instrument VOAMS12. The 1,4-dioxane results for associated samples SB-34 (35-36), SB-34 (97-98), DUPE-1-13, SB-35 (35-36) and SB-35 (44-45) were non-detect and were qualified "UJ," as estimates, because of poor instrument sensitivity.

The 01/28/13 initial calibration average relative response factor for 2-butanone was less than the advisory limit of 0.05 on instrument VOAMS12. In addition, the continuing calibration response factor for 2-butanone was less than the advisory limit of 0.05 on 01/29/13 at 07:12 on instrument VOAMS12. The 2-butanone results for associated samples SB-34 (35-36), SB-34 (97-98), DUPE-1-13, SB-35 (35-36) and SB-35 (44-45) were positive and were qualified "J," as estimated concentrations, because of poor instrument sensitivity.

The continuing calibration percent differences for bromoform and 1,2-dibromo-3-chloropropane were less than the lower quality control limit of -20% on 01/29/13 at 07:12 on instrument VOAMS12. The bromoform and 1,2-dibromo-3-chloropropane results for associated samples SB-34 (35-36), SB-34 (97-98), DUPE-1-13, SB-35

(35-36) and SB-35 (44-45) were non-detect and were qualified “UJ,” as estimates, because of low instrument bias.

The continuing calibration percent drift acetone was greater than the upper quality control limit of 20% on 01/29/13 at 07:12 on instrument VOAMS12. The positive acetone results for associated samples SB-34 (97-98) and SB-35 (44-45) were qualified “J,” as estimated concentrations, because of high instrument bias. The acetone results for samples SB-34 (35-36), DUPE-1-13, and SB-35 (35-36) were qualified “U,” as undetected, because of laboratory contamination. No further data qualifications were required.

Matrix Spike Recoveries (pp.72-75): The SB-35 (35-36) MS and/or MSD recoveries for carbon disulfide, cis-1,2-dichloroethene, trans-1,2-dichloroethene, 1,1,1-trichloroethane, carbon tetrachloride, styrene, trichloroethene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2,3-trichlorobenzene, 1,2,4-trichlorobenzene, tetrachloroethene, and 1,2-dibromo-3-chloropropane were less than the lower advisory limits, but greater than 10%. The positive and non-detect carbon disulfide, cis-1,2-dichloroethene, trans-1,2-dichloroethene, 1,1,1-trichloroethane, carbon tetrachloride, styrene, trichloroethene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2,3-trichlorobenzene, 1,2,4-trichlorobenzene, tetrachloroethene, and 1,2-dibromo-3-chloropropane results for sample SB-35 (35-36) were qualified “J/UJ,” as estimates, because of low bias attributable to matrix effects.

2.0 Semivolatile Organic Compounds

460-49238-1

Calibrations (pp.233-238, 293-295): The initial calibration relative standard deviations (RSDs) for benzaldehyde were greater than 15% on 01/08/13 on instrument BNAMS4. The benzaldehyde, result for associated sample SB-32 (64-66) was non-detect and was qualified "UJ," as an estimate, because of calibration nonconformance.

The continuing calibration percent difference for benzaldehyde was less than the lower quality control limit of -20% on 01/11/13 at 09:49 on instrument BNAMS4. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde result for associated sample SB-32 (64-66) was non-detect and was qualified "UJ," as an estimate, because of low instrument bias.

460-49385-1

Calibrations (pp.476, 537, 586-588, 597-599): The initial calibration RSDs for benzaldehyde were greater than 15% on 01/16/13 on instrument BNAMS10 and on 01/11/13 on instrument BNAMS11. The benzaldehyde results for associated samples SB-28 (33-35), SB-28 (65-66), SB-27 (80-85), and SB-27 (90-92) were non-detect and were qualified "UJ," as estimates, because of calibration nonconformance.

The continuing calibration percent difference for hexachlorocyclopentadiene was less than the lower quality control limit of -20% on 01/17/13 at 03:46 on instrument BNAMS10. Sensitivity decreased with respect to the initial calibration average relative response factor. The hexachlorocyclopentadiene results for associated samples SB-28 (33-35), SB-28 (65-66), and SB-27 (90-92) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration percent drift for 2,4-dinitrophenol were less than the lower quality control limit of -20% on 01/20/13 at 17:26 on instrument BNAMS11. Sensitivity decreased with respect to the continuing calibration standard true value. The 2,4-dinitrophenol results for associated sample SB-27 (80-85) was non-detect and was qualified "UJ," as an estimate, because of low instrument bias.

Laboratory Control Sample Recoveries (pp.387-390): The LCS (460-143055/2-A) recovery for 1,2,4,5-tetrachlorobenzene was less than the lower quality control limit, but greater than 10%. The 1,2,4,5-tetrachlorobenzene results for associated samples SB-28 (33-35), SB-28 (65-66), and SB-27 (90-92) were non-detect and were qualified "UJ," as estimates, because of low method bias.

The LCS (460-143852/2-A) recovery for benzaldehyde was less than the lower quality control limit, but greater than 10%. The benzaldehyde result for associated sample SB-27 (80.85) was non-detect and was qualified "UJ," as an estimate, because of low method bias.

Surrogate Recoveries/Dilutions (p. 386): Sample SB-27 (80-85) required analysis at a 150-fold initial dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out and could not be used to assess method accuracy. There were sufficient, acceptable quality control check results to demonstrate that the analytical process was in control. No data qualifications were necessary based on professional judgment. The initial dilution elevated the reporting limits and MDLs for non-detect results.

460-49593-1

Calibrations (p.386): The initial calibration RSD for benzaldehyde was greater than 15% on 01/16/13 on instrument BNAMS10. The benzaldehyde, results for associated samples SB-33 (35-36) and SB-33 (52-54) were non-detect and were qualified "UJ," as estimates, because of initial calibration nonconformance and low instrument bias.

Laboratory Control Sample Recoveries (pp.317-318): The LCS (460-143723/2-A) recovery for 1,2,4,5-tetrachlorobenzene was less than the lower quality control limit, but greater than 10%. The 1,2,4,5-tetrachlorobenzene results for associated samples SB-33 (35-36) and SB-33 (52-54) were non-detect and were qualified "UJ," as estimates, because of low method bias.

Surrogate Recoveries/Dilutions (p. 316): Sample SB-33 (35-36) required analysis at a 200-fold dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out and could not be used to evaluate method accuracy. There were sufficient, acceptable quality control check results to demonstrate that the analytical process was in control. No data qualifications were necessary based on professional judgment. The initial dilution elevated the reporting limits and MDLs for non-detect results.

460-49827-1

Calibrations (pp.331,392-394): The initial calibration relative standard deviations (RSDs) for benzaldehyde were greater than 15% on 01/16/13 on instrument BNAMS10. The benzaldehyde, results for associated samples SB-34(35-36), SB-34 (97-98), DUPE-1-13, SB-35 (35-36), and SB-35 (44-45) were non-detect and were qualified "UJ," as an estimate, because of calibration nonconformance.

The continuing calibration percent differences for benzaldehyde, caprolactam, 2-nitroaniline, and 4-nitroaniline were less than the lower quality control limit of -20% on 01/25/13 at 02:15 on instrument BNAMS10. Sensitivity decreased with respect to the initial calibration average relative response factors. The benzaldehyde, caprolactam, 2-nitroaniline, and 4-nitroaniline results for associated samples SB-34(35-36), SB-34 (97-98), DUPE-1-13, SB-35 (35-36), and SB-35 (44-45) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

Matrix Spike Recoveries (pp.263-266): The SB-35 (35-36) MS/MSD recoveries for benzo(b)fluoranthene and benzo(a)pyrene were greater than the upper advisory limits. The benzo(b)fluoranthene and benzo(a)pyrene results for sample SB-35 (35-36) were positive and were qualified "J," as estimated concentrations, because of high bias attributable to matrix effects.

Data Reporting (pp. Form 1s): The volatile tentatively identified compounds (TICs) were not reported in the original 460-49827-1 data report from TestAmerica-Edison. The data were requested and the EDDs and data report were revised to include the TICs.

3.0 Notes

Positive organic and inorganic results less than the reporting limit, but greater than the method detection limit (MDL) were qualified “J,” as estimated concentrations, due to increased uncertainty near the detection limit. The “J” qualifiers were maintained in the data validation.

Matrix spike and matrix spike duplicates, laboratory duplicates, and ICP serial dilutions that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

4.0 Field Duplicate Precision

A field duplicate sample was collected for sample SB-34 (35-36). Field duplicate results were evaluated using the following criteria.

Organics: The RPD must be ≤ 50% for soil/sediments, or the difference between the parent and field duplicate results must be less than the reporting limit for results less than five times the reporting limit.

The results for the parent and field duplicate sample were non-detects, with exception to those listed in Table 2 below. All RPDs were less than the maximum advisory limits or the difference criteria were met for all compounds/analytes except those listed in bolded test. In the case of nonconforming field duplicate precision, for organic compounds the parent and field duplicate sample results are qualified "J/UJ", for nonconforming inorganic parameters all results in the SDG are qualified "J/UJ," as estimates, because of field sampling/laboratory imprecision and/or sample heterogeneity.

Table 2 – Field Duplicate Precision
National Grid / Equity Soil Samples

Parameter	SB-34 (35-36)		DUPE-1-13		RPD (%)
Benzene	4.5	µg/kg	6.2	µg/kg	32
Toluene	0.26 J	µg/kg	0.31 J	µg/kg	18
Ethylbenzene	**1.5**	**µg/kg**	**4.2**	**µg/kg**	**95**
o-Xylene	0.74 U	µg/kg	0.25 J	µg/kg	NC *
Isopropylbenzene	0.12 J	µg/kg	0.20 J	µg/kg	50*
MTBE	**4.7**	**µg/kg**	**2.8**	**µg/kg**	**51**
cis-1,2-Dichloroethene	11	µg/kg	6.8	µg/kg	47
trans-1,2-Dichloroethene	2.5	µg/kg	1.8	µg/kg	33
Trichloroethene	21	µg/kg	15	µg/kg	33
Tetrachloroethene	290	µg/kg	240	µg/kg	19
Carbon disulfide	0.22 J	µg/kg	0.27 J	µg/kg	20
Methylene chloride	0.25 J	µg/kg	0.27 J	µg/kg	8
Acetone	13	µg/kg	13	µg/kg	0
2-Butanone	2.5 J	µg/kg	3.4 J	µg/kg	31
Percent Solids	90.9	%	91.0	%	0.11

The following notations are used in the field precision table.

RPD: Relative percent difference

NC: RPD could not be calculated

*: The difference between the parent and field duplicate results was less than the reporting limit for results less than five times the reporting limit. Variation of this magnitude is acceptable.

µg/kg: micrograms per kilogram (ppb)

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.4° C IR #4
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

TestAmerica Edison Receipt Temperature and pH Log

Job Number: 49593

Number of Coolers: 1

IR Gun #: 2

Temp. Cooler #1 (Deg C) (Raw/Corrected): 2.0/1.4

Temp. Cooler #2 (Deg C) (Raw/Corrected): _____

Temp. Cooler #3 (Deg C) (Raw/Corrected): _____

Temp. Cooler #4 (Deg C) (Raw/Corrected): _____

Temp. Cooler #5 (Deg C) (Raw/Corrected): _____

Temp. Cooler #6 (Deg C) (Raw/Corrected): _____

Temp. Cooler #7 (Deg C) (Raw/Corrected): _____

Temp. Cooler #8 (Deg C) (Raw/Corrected): _____

Temp. Cooler #9 (Deg C) (Raw/Corrected): _____

Sample No.	Ammonia (pH<2)	COD (pH<2)	Nitrate Nitrite (pH<2)	*Metals (pH<2)	Pest (pH 5-9)	PHC (pH<2)	Phenols (pH<2)	Sulfide (pH>9)	TKN (pH<2)	TOC (pH<2)	Total Cyanide (pH>12)	Total Phos (pH<2)	Other

If pH adjustments are required record the information below:

Sample No(s). adjusted: _____

Preservative Name/Conc.: _____

Volume of Preservative used (ml): _____

Lot # of Preservative: _____

Expiration Date: _____

Project Manager and the Department Manager should be notified about the samples which were pH adjusted.

** Samples for Metal analysis which are out of compliance must be acidified at least 24 hours prior to analysis.*

EDS-WI-038, Rev 3, 10/8/12

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.4°C IR#4
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	See NCM
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	False	See NCM
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	See NCM
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.4°C IR#4
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

List Source: TestAmerica Edison

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.1,4.1,4.1° C IR #4
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

Executive Summary

Overview

A data assessment was performed by Gregory A. Malzone of AECOM Pittsburgh on two data packages from Accutest Laboratories - New England, 495 Tech Center West, Building 1, Marlborough, MA 01752 for the analysis of soil samples collected October 13-15, 2014 at the Equity former MGP site.

The following analytical methods were requested on the chain-of-custody (CoC) records.

- Volatile Organic Compounds by USEPA SW-846 Method 8260C
- Semivolatile Organic Compounds by USEPA SW-846 Method 8270D
- Polychlorinated Biphenyls (PCBs) by USEPA SW-846 Method 8082A
- Gasoline Range Organics (GRO) by USEPA SW-846 Method 8015
- Diesel Range Organics (DRO) by USEPA SW-846 Method 8015
- Comparison of Waterborne Petroleum Oils by Gas Chromatography by ASTM D3328-06 (Sample T5-SB7 (10-11) only)
- Oil Spill Source Identification by Gas Chromatography and Positive Ion Electron Impact Low Resolution Mass Spectrometry by ASTM D5729-06/8270C (Sample T5-SB7 (10-11) only)
- Total TAL Metals by USEPA SW-846 Methods 6010C and 7471B
- Percent Solids for Dry Weight Corrections by Method SM2540 B mod.

Not all samples were analyzed for all of the tests listed. Refer to the CoCs for the specific tests that were requested.

The data were evaluated for conformance to method specifications and qualifiers were applied using the USEPA Region II SOPs and the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, EPA 540/R-99-008, May 1999 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, USEPA-540-R-10-011, January 2010, with additional reference to *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, EPA-540-R-04-004, October 2004, as they applied to the analytical methods employed. Field duplicate RPD review and applicable control limits were taken from the USEPA *Region I, New England Data Validation Functional Guidelines for Evaluating Environmental Analyses*, December 1996.

The samples were processed and the results were reported under two sample delivery groups (SDGs). Table 1 provides a sample submittal list with the field IDs cross-referenced with the Accutest IDs.

Table 1 - Sample Submittals
National Grid / Equity Samples

Field ID	Laboratory ID	Matrix	Date Sampled
T5-SB7 (10-11)	MC34323-1/1A	Soil	10/13/2014 13:27
T5-SB7 (11.5-15)	MC34323-2/2A	Soil	10/13/2014 13:27
T5-SB2 (18-19)	MC30823-1/1A	Soil	10/15/2014 15:35
T5-SB2 (21.5-25)	MC30823-2/2A	Soil	10/15/2014 15:44

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, matrix spike/matrix spike duplicates (MS/MSD), surrogate recoveries, laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

Inorganic data quality was evaluated by reviewing the following parameters: holding times, matrix spikes, initial calibrations, continuing calibration verification standard recoveries, contract required detection limit standard recoveries, laboratory control samples, ICP interference check sample recoveries, ICP serial dilution results, field and laboratory duplicates, laboratory blanks, and analyte quantitation.

All data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the compounds and analytes in the media tested (i.e., soil) with the qualifications described below. Completeness of 100% was achieved for this data set. This is within the goal of 90-100% and is acceptable.

A glossary of data qualifier definitions is included in Appendix A of this report. The data qualifier summaries are attached as Appendix B of this report.

Each noncompliance with specific data usability criteria that required data qualification is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

MC34323

Laboratory Control Sample Recoveries (pp. 37-40): The LCS MSK2609-BS recoveries for bromomethane, carbon tetrachloride, vinyl acetate and vinyl chloride were greater than the upper quality control limits. Bromomethane, carbon tetrachloride, vinyl acetate and vinyl chloride were not detected in associated medium-level soil (MLS) sample T5-SB7 (10-11). No data qualification was required in response to the high method bias.

The LCS MSM2446-BS recovery for acrolein was greater than the upper quality control limit. Acrolein was not detected in associated low-level soil (LLS) sample T5-SB7 (11.5-15). No data qualification was required in response to the high method bias.

Matrix spike Recoveries and RPDs (pp. 43-44): An MS/MSD analysis was performed on sample T5-SB7 (10-11). The matrix spike recoveries for chloroethane and vinyl chloride were greater than the upper advisory limits. Chloroethane and vinyl chloride were not detected in associated MLS sample T5-SB7 (10-11). No data qualification was required in response to the high bias attributable to matrix effects.

The T5-SB7 (10-11) MS and MSD recoveries for vinyl acetate were less than the lower advisory limits. The MSD recovery was less than 20%, at 12%. The relative percent difference between the MS and MSD recoveries for vinyl acetate was greater than the maximum advisory limit. The non-detect vinyl acetate result for sample T5-SB7 (10-11) was qualified “UJ,” as an estimate, because of low bias attributable to matrix interference.

MC34374

Laboratory Control Sample Recoveries (pp. 37-38): The LCS MSK2610-BS recoveries for bromomethane, carbon tetrachloride, vinyl acetate and vinyl chloride were greater than the upper quality control limits. Bromomethane, carbon tetrachloride, vinyl acetate and vinyl chloride were not detected in associated MLS sample T5-SB2 (18-19). No data qualification was required in response to the high method bias.

2.0 Semivolatile Organic Compounds

MC34323

Blank Contamination (pp.67-69): Butyl benzyl phthalate and bis(2-ethylhexyl)phthalate were detected in the method blank OP40220-MB at concentrations less than the reporting limits. Butyl benzyl phthalate and bis(2-ethylhexyl)phthalate were not detected in associated samples T5-SB7 (10-11) and T5-SB7 (11.5-15). No data qualifications were required.

MC34374

Blank Contamination (pp. 64-66): Naphthalene was detected in the method blank OP40244-MB at a concentration less than the reporting limit. The naphthalene result for sample T5-SB2 (21.5-25) was greater than the reporting limit but less than five times the blank level corrected for preparation volumes. The positive naphthalene result for sample T5-SB2 (21.5-25) was qualified "J," as biased high because of laboratory contamination. The naphthalene result for sample T5-SB2 (18-19) was greater than five times the blank level and did not require qualification.

Laboratory Control Sample Recoveries (pp. 67-69): The LCS OP40244-BS recovery for 3,3'-dichlorobenzidine was greater than the upper quality control limit. 3,3'-Dichlorobenzidine was not detected in associated samples T5-SB2 (21.5-25) and T5-SB2 (18-19). No data qualification was required in response to the high method bias.

Surrogate Recoveries (p. 73): Sample T5-SB2(18-19) required analysis at an initial 20-fold dilution and a subsequent 200-fold dilution to bring the target compound concentrations into the calibration range. The dilutions were high enough to dilute out the surrogates. The surrogate recoveries could not be used to assess method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in control. No data qualifications were necessary based on professional judgment.

3.0 Polychlorinated Biphenyls (PCBs)

MC34323

No data quality issues were noted. No data qualifications were required.

MC34374

Surrogate Recoveries: One or more surrogate recoveries for samples T5-SB2 (18-19) and T5-SB2 (21.5-25) were greater than the upper quality control limits because of matrix interference. No Aroclors were detected in samples T5-SB2 (18-19) and T5-SB2 (21.5-25). No data qualifications were required.

4.0 Petroleum Hydrocarbons

MC34323 and MC34374

No data quality issues were noted. No data qualifications were required.

MC34323R

Blank Contamination (pp. 22-24): Styrene, C2-naphthalenes, C3-naphthalenes and C4-naphthalenes were detected in the D5739-06/8270C method blank OP40486-MB. The styrene, C2-naphthalenes, C3-naphthalenes and C4-naphthalenes results for associated sample T5-SB7 (10-11) were positive and greater than five times the blank levels. No data qualifications were required.

Holding Time (pp. 17-18): The ASTM D5739-06/8270C organic extraction for sample T5-SB7 (10-11) was performed three days beyond the 14-day recommended holding time. All positive and non-detect D5739-06/8270C results for sample T5-SB7 (10-11) were qualified "J/UJ," as estimates, biased low because the holding time was exceeded.

The ASTM 3328-06 organic extraction for sample T5-SB7 (10-11) was performed three days beyond the 14-day recommended holding time. All positive and non-detect ASTM 3328-06 results for sample T5-SB7 (10-11) were qualified "J/UJ," as estimates, biased low because the holding time was exceeded.

Laboratory Duplicate Precision (pp. 30-34): A laboratory duplicate analysis was performed on sample T5-SB7 (10-11). The relative percent differences (RPDs) between the original and duplicate analyses were greater than the maximum quality control limits for C1-benzene, C3-benzene, toluene, isopropylbenzene, n-propylbenzene, 1,2,4-trimethylbenzene, sec-butylbenzene and 18a(H)&18b(H)-Oleananes. The C1-benzene, C3-benzene, toluene, isopropylbenzene, n-propylbenzene, 1,2,4-trimethylbenzene, sec-butylbenzene and 18a(H)&18b(H)-Oleananes results for sample T5-SB7 (10-11) were positive and were qualified "J," as estimated concentrations, because of method imprecision and/or sample heterogeneity.

5.0 Total Metals

MC34323 and MC34374

No data quality issues were noted. No data qualifications were required.

6.0 Notes

Matrix spike and matrix spike duplicates, laboratory duplicates, and ICP serial dilutions that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client:	AECOM Environment	**Job No**	MC34323
Site:	Equity - National Grid, 300 Maspeth Ave, Brooklyn, NY	**Report Date**	10/21/2014 3:39:44 PM

2 Sample(s) were collected on 10/13/2014 and were received at Accutest on 10/14/2014 properly preserved, at 1.7 Deg. C and intact. These Samples received an Accutest job number of MC34323. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix SO **Batch ID:** MSK2609

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC34323-1AMS, MC34323-1AMSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Blank Spike Recovery(s) for Bromomethane, Carbon tetrachloride are outside control limits. Blank Spike meets program technical requirements.
- Matrix Spike Recovery(s) for Chloroethane, Vinyl Acetate are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- Matrix Spike Duplicate Recovery(s) for Vinyl Acetate are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- RPD(s) for MSD for Vinyl Acetate are outside control limits for sample MC34323-1AMSD. High RPD due to possible matrix interference and/or sample non-homogeneity.
- MSK2609-BS for Vinyl Acetate, Vinyl chloride: Outside control limits. Associated samples are non-detect for this compound.
- MC34323-1AMS/MSD for Vinyl chloride: Outside control limits. Associated samples are non-detect for this compound.

Matrix SO **Batch ID:** MSM2446

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC34429-1MS, MC34429-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Blank Spike Recovery(s) for Acrolein are outside control limits. Blank Spike meets program technical requirements. Blank Spike meets program technical requirements.
- Matrix Spike Recovery(s) for 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2-Chloroethyl vinyl ether, Acetone, Bromomethane, Chlorobenzene, Chloroethane, Chloromethane, Ethylbenzene, Styrene, Tetrachloroethene, Trichlorofluoromethane, Vinyl chloride, Xylene (total) are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- Matrix Spike Duplicate Recovery(s) for 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2-Chloroethyl vinyl ether, Acetone, Chlorobenzene, Ethylbenzene, Styrene, Xylene (total), Trichlorofluoromethane are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- RPD(s) for MSD for Chloroethane, Trichlorofluoromethane are outside control limits for sample MC34429-1MSD. High RPD due to possible matrix interference and/or sample non-homogeneity.

Extractables by GCMS By Method SW846 8270D

Matrix SO	Batch ID: OP40220

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) MC34323-2AMS, MC34323-2AMSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- OP40220-MS/MSD Recovery(s) for 2,4-Dinitrophenol, Hexachlorocyclopentadiene are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- RPD(s) for MSD for Hexachlorocyclopentadiene are outside control limits for sample OP40220-MSD. High RPD due to possible matrix interference and/or sample heterogeneity.

Volatiles by GC By Method SW846 8015

Matrix SO	Batch ID: GAB4622

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC34323-1MS, MC34323-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Extractables by GC By Method SW846 8082A

Matrix SO	Batch ID: OP40222

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC34327-1MS, MC34327-1MSD were used as the QC samples indicated.

Extractables by GC By Method SW846-8015

Matrix SO	Batch ID: OP40221

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC34330-1MS, MC34330-1MSD were used as the QC samples indicated.

Metals By Method SW846 6010C

Matrix SO	Batch ID: MP23743

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC34285-2MS, MC34285-2MSD, MC34285-2PS, MC34285-2SDL were used as the QC samples for metals.
- Matrix Spike Recovery(s) for Antimony, Manganese are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity. Post spike within acceptable range.
- Matrix Spike Duplicate Recovery(s) for Antimony are outside control limits. Spike duplicate recovery indicates possible matrix interference and/or sample nonhomogeneity.
- MS/MSD Recovery(s) for Aluminum, Iron are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- RPD(s) for MSD for Aluminum are outside control limits for sample MP23743-S2. High RPD due to possible matrix interference and/or sample non-homogeneity.
- RPD(s) for Serial Dilution for Selenium, Thallium are outside control limits for sample MP23743-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MP23743-SD1 for Arsenic: Serial dilution indicates possible matrix interference.

Metals By Method SW846 7471B

Matrix SO	Batch ID: MP23752

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC34357-3MS, MC34357-3MSD were used as the QC samples for metals.

Wet Chemistry By Method SM21 2540 B MOD.

Matrix SO	Batch ID: GN48669

- Sample(s) MC34323-2DUP were used as the QC samples for Solids, Percent.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC34323).

Subject: RE: Equity sample batch MC34323

Matt,

Paul Lundegard and I have completed our review of the GC chromatograms and TPH results for sample batch MC34323.

Please proceed with full forensic analysis of sample MC34323-1 only.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client:	AECOM Environment	**Job No**	MC34374
Site:	Equity - National Grid, 300 Maspeth Ave, Brooklyn, NY	**Report Date**	10/28/2014 12:40:44 PM

2 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 10/15/2014 and were received at Accutest on 10/16/2014 properly preserved, at 1.1 Deg. C and intact. These Samples received an Accutest job number of MC34374. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix: SO **Batch ID:** MSK2610

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC34456-2MS, MC34456-2MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Blank Spike Recovery(s) for Bromomethane, Carbon tetrachloride are outside control limits. Outside control limits. Blank Spike meets program technical requirements.
- MS/MSD Recovery(s) for Acrolein, Chloroethane are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- Matrix Spike Duplicate Recovery(s) for 1,1,2,2-Tetrachloroethane are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- RPD(s) for MSD for Vinyl chloride are outside control limits for sample MC34456-2MSD. High RPD due to possible matrix interference and/or sample non-homogeneity.
- MSK2610-BS for Vinyl Acetate, Vinyl chloride: Outside control limits. Associated samples are non-detect for this compound.
- MC34456-2MS/MSD for Vinyl Acetate, Vinyl chloride: Outside control limits. Associated samples are non-detect for this compound.

Matrix: SO **Batch ID:** MSM2448

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC34431-1MS, MC34431-1MSD were used as the QC samples indicated.
- Matrix Spike Recovery(s) for 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2-Butanone (MEK), 2-Chloroethyl vinyl ether, Acetone, Acrolein, Bromomethane, Chlorobenzene, Styrene, trans-1,3-Dichloropropene are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- Matrix Spike Duplicate Recovery(s) for 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2-Butanone (MEK), 2-Chloroethyl vinyl ether, Acetone, Carbon tetrachloride, Styrene, Acrolein, Chloroethane are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- RPD(s) for MSD for Acrolein, Bromomethane, Chloroethane, Chloromethane, Trichlorofluoromethane, Vinyl chloride are outside control limits for sample MC34431-1MSD. High RPD due to possible matrix interference and/or sample non-homogeneity.
- MC34431-1MSD for 4-Bromofluorobenzene: Outside control limits due to possible matrix interference. Confirmed by MS/MSD.

Extractables by GCMS By Method SW846 8270D

Matrix: SO	Batch ID: OP40244

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) MC34374-1AMS, MC34374-1AMSD were used as the QC samples indicated.
- Sample(s) MC34374-2A have compound(s) reported with a "B" qualifier, indicating analyte is found in the associated method blank.
- Blank Spike Recovery(s) for 3,3'-Dichlorobenzidine are outside control limits. Outside control limits. Blank Spike meets program technical requirements.
- Matrix Spike Recovery(s) for 2-Chlorophenol, 4-Chloro-3-methyl phenol, 2,4-Dimethylphenol, 2,4-Dinitrophenol, 4,6-Dinitro-o-cresol, 2-Methylphenol, 3&4-Methylphenol, 2-Nitrophenol, 4-Nitrophenol, 4-Chloroaniline, 4-Chlorophenyl phenyl ether, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, Di-n-butyl phthalate, bis(2-Ethylhexyl)phthalate, Hexachlorobenzene, Hexachlorocyclopentadiene, Hexachloroethane, 3-Nitroaniline, 4-Nitroaniline, Nitrobenzene, N-Nitrosodiphenylamine are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- Matrix Spike Duplicate Recovery(s) for 4-Chloro-3-methyl phenol, 2,4-Dimethylphenol, 2,4-Dinitrophenol, 4,6-Dinitro-o-cresol, 2-Nitrophenol, 4-Nitrophenol, 4-Chloroaniline, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, Di-n-butyl phthalate, bis(2-Ethylhexyl)phthalate, Hexachlorobenzene, Hexachlorocyclopentadiene, Hexachloroethane, 2-Nitroaniline, N-Nitrosodiphenylamine are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- MS/MSD Recovery(s) for 2-Methylnaphthalene, Acenaphthene, Acenaphthylene, Anthracene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Dibenzofuran, Fluoranthene, Fluorene, Indeno(1,2,3-cd)pyrene, Naphthalene, Phenanthrene, Pyrene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- RPD(s) for MSD for 2,4,5-Trichlorophenol, 2,6-Dinitrotoluene, 2-Chlorophenol, 2-Methylphenol, 2-Nitroaniline, 3&4-Methylphenol, 3-Nitroaniline, 4,6-Dinitro-o-cresol, 4-Bromophenyl phenyl ether, 4-Chloro-3-methyl phenol, 4-Chlorophenyl phenyl ether, 4-Nitroaniline, 4-Nitrophenol, Hexachlorocyclopentadiene are outside control limits for sample OP40244-MSD. High RPD due to possible matrix interference and/or sample heterogeneity.
- OP40244-MSD for 2,4,6-Tribromophenol: Outside control limits due to dilution.
- MC34374-1A for 2-Fluorobiphenyl, Terphenyl-d14, 2-Fluorophenol, 2,4,6-Tribromophenol, Nitrobenzene-d5: Outside control limits due to dilution.

Volatiles by GC By Method SW846 8015

Matrix: SO	Batch ID: GAB4624

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC34370-2MS, MC34370-2MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Extractables by GC By Method SW846 8082A

Matrix: SO	Batch ID: OP40238

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) MC34371-1MS, MC34371-1MSD, OP40238-MSMSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Matrix Spike Duplicate Recovery(s) for Aroclor 1260 are outside control limits. Outside control limits due to possible matrix interference.
- MC34374-1A for Decachlorobiphenyl, Tetrachloro-m-xylene: Outside control limits due to possible matrix interference.
- MC34374-2A for Decachlorobiphenyl: Outside control limits due to possible matrix interference.

Extractables by GC By Method SW846-8015

Matrix: SO	Batch ID: OP40240

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC34374-1MS, MC34374-1MSD were used as the QC samples indicated.
- MS/MSD Recovery(s) for TPH-DRO (Semi-VOA) are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- MC34374-1: Confirmation run for surrogate recoveries.
- MC34374-1 for o-Terphenyl: Outside control limits due to dilution.

Metals By Method SW846 6010C

Matrix: SO	Batch ID: MP23759

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC34381-25MS, MC34381-25MSD, MC34381-25SDL were used as the QC samples for metals.
- Matrix Spike Duplicate Recovery(s) for Zinc are outside control limits. Spike duplicate recovery indicates possible matrix interference and/or sample nonhomogeneity.
- MS/MSD Recovery(s) for Aluminum, Calcium, Iron, Manganese are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- RPD(s) for MSD for Manganese are outside control limits for sample MP23759-S2. High RPD due to possible matrix interference and/or sample non-homogeneity.
- RPD(s) for Serial Dilution for Antimony, Beryllium are outside control limits for sample MP23759-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- RPD(s) for MP23759-SD1 for Sodium: Serial Dilution RPD acceptable due to low duplicate and sample concentrations.

Metals By Method SW846 7471B

Matrix: SO	Batch ID: MP23760

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC34381-25MS, MC34381-25MSD were used as the QC samples for metals.

Wet Chemistry By Method SM21 2540 B MOD.

Matrix: SO	Batch ID: GN48730

- Sample(s) MC34356-2DUP were used as the QC samples for Solids, Percent.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC34374).

Executive Summary

Overview

A data assessment was performed by Gregory A. Malzone of AECOM Pittsburgh on six data packages from Accutest Laboratories - New England, 495 Tech Center West, Building 1, Marlborough, MA 01752 for the analysis of soil samples collected May 20-21, 2014 at the Equity former MGP site.

The following analytical methods were requested on the chain-of-custody (COC) records.

- Volatile Organic Compounds by USEPA SW-846 Method 8260B
- Semivolatile Organic Compounds by USEPA SW-846 Method 8270C
- Polychlorinated Biphenyls (PCBs) by USEPA SW-846 Method 8082A
- Total Petroleum Hydrocarbons (TPH) by USEPA SW-846 Method 8015C/ASTM D3328-06
- Total TAL Metals by USEPA SW-846 Methods 6010B and 7471A
- Percent Solids for Dry Weight Corrections by Method SM2540 G mod.

Not all samples were analyzed for all of the tests listed. Refer to the chain-of-custody records (COCs) for the specific tests that were requested.

The data were evaluated for conformance to method specifications and qualifiers were applied using the USEPA Region II SOPs and the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, EPA 540/R-99-008, May 1999 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, USEPA-540-R-10-011, January 2010, with additional reference to *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, EPA-540-R-04-004, October 2004, as they applied to the analytical methods employed. Field duplicate RPD review and applicable control limits were taken from the *USEPA Region I Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses*, December 1996.

The samples were processed and the results were reported under two sample delivery groups (SDGs). Table 1 provides a sample submittal list with the field IDs cross-referenced with the Accutest IDs.

T2-SB4 (5-10)	MC30823-9	Soil	5/20/2014 13:30

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

Inorganic data quality was evaluated by reviewing the following parameters: holding times, matrix spikes, initial calibrations, continuing calibration verification standard recoveries, contract required detection limit standard recoveries, laboratory control samples, ICP interference check sample recoveries, ICP serial dilution results, field and laboratory duplicates, laboratory blanks, and analyte quantitation.

All data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the compounds and analytes in the media tested (i.e., soil) with the qualifications described below. Completeness of 100% was achieved for this data set. This is within the goal of 90-100% and is acceptable.

A glossary of data qualifier definitions is included in Appendix A of this report. The data qualifier summaries are attached as Appendix B of this report.

Each noncompliance with specific data usability criteria that required data qualification is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

MC30767

No data quality issues were noted. No data qualifications were required.

MC30823

Blank Contamination (pp. 82-83): Methylene chloride was detected in the method preparation blank MSM2319-MB at a concentration less than two times the reporting limit. In the *National Functional* Guidelines the USEPA identifies methylene chloride as a common laboratory solvent and contaminant. The positive methylene chloride result for associated sample T1-SB7(22-23) was less than two times the reporting limit and was qualified "U," as undetected, because of laboratory contamination.

Matrix spike Recoveries (pp. 92-93): The T2-SB4 (5-10) MS/MSD recoveries for methyl acetate were less than the lower advisory limit, but greater than 20%. The methyl acetate result for sample T2-SB4 (5-10) was non-detect and was qualified "UJ," as estimated, because of low bias due to matrix effects.

2.0 Semivolatile Organic Compounds

MC30767

Laboratory Control Sample Recoveries (pp.38-39): The LCS (OP38307-BS) recovery for hexachlorocyclopentadiene was less than the lower quality control limits, but greater than 10%. The hexachlorocyclopentadiene results for associated samples T2-SB1 (15-20) and T2-SB1 (21-22) were non-detect and were qualified "UJ," as estimates, because of low method bias.

MC30823

Matrix Spike Recoveries (pp. 92-93): Sample T1-SB8 (23-24) was designated in the field to be processed as the quality control sample, that is as the MS/MSD. The T1-SB8 (23-24) MS/MSD recoveries for hexachlorocyclopentadiene and 2,4-dinirophenol were less than the lower advisory limit, but greater than 10%. The hexachlorocyclopentadiene and 2,4-dinirophenol results for sample T1-SB8 (23-24) were non-detect and were qualified "UJ," as estimates, because of low bias due to matrix effects.

3.0 Polychlorinated Biphenyls (PCBs)

MC30767

No data quality issues were noted. No data qualifications were required.

MC30823

No data quality issues were noted. No data qualifications were required.

4.0 Petroleum Hydrocarbons

MC30767

Laboratory Duplicate Precision (pp. 9-10): A duplicate analysis was performed for ASTM D5739-06/8270C SIM sample T2-SB1 (15-20). The RPDs between the original and laboratory duplicate results for trans-decalin, cis-decalin, C1-decalins, C2-decalins and C4-phenanthrenes/anthracenes were greater than the maximum quality control limits. The trans-decalin, cis-decalin, C1-decalins, C2-decalins and C4-phenanthrenes/anthracenes results for sample T2-SB1 (15-20) were positive and were qualified "J," as estimated concentrations, because of imprecision due to sample heterogeneity.

MC30823

Surrogate Recoveries (p. 344): The o-terphenyl surrogate recoveries for samples T1-SB7 (16.5-17.5), T1-SB8 (17-18.5) and T1-SB9 (15-18) were less than the lower quality control limits, but greater than 10%. The TPH (C8-C40) results for samples T1-SB7 (16.5-17.5), T1-SB8 (17-18.5) and T1-SB9 (15-18) were positive and were qualified "J," as estimated concentrations, because of low bias due to matrix effects. The positive and non-detect T1-SB7 (16.5-17.5) and T1-SB9 (15-18) petroleum oil (ASTM D3328-06) results were qualified "J/UJ," as estimates, because of low bias due to matrix effects.

5.0 Total Metals

MC30767 and MC30823

Matrix Spike Recoveries (pp. 58-61, 68): Sample T1-SB8 (23-24) was designated in the field to be processed as the quality control sample, that is as the MS/MSD. The T1-SB8 (23-24) MS/MSD recoveries for antimony were less than the lower validation limit of 75%, at 24.0% and 25.8%. The post-digestion spike recovery was within the validation limits of 75-125%, at 108.1%. All samples were affected. All positive and non-detect antimony results were qualified "J/UJ," as estimates, because of low method bias and/or matrix effects.

ICP Serial Dilution Results (pp. 66-67): A serial dilution analysis was performed on sample T1-SB8 (23-24). The percent differences for barium, calcium, iron and zinc were greater than the validation limit of 10%. All samples were affected. All positive barium, calcium, iron and zinc results were qualified "J," as estimated concentrations, because of physical/chemical matrix interference.

6.0 Field Duplicate Precision

A field duplicate sample was collected for sample T1SB9 (18-20). Field duplicate results were evaluated using the following criteria.

Organics: The RPD must be ≤ 50% for soil/sediments, for results greater than or equal to two times the reporting limit. If one of the results is non-detect or less than two times the reporting limit, and the duplicate is greater than two times the reporting limit, the difference between the parent and field duplicate results must be less than or equal to two times the reporting limit.

Action applies only to the affected analyte in the organic duplicate sample pair.

Inorganics: The RPD must be ≤ 50% for soil/sediments, for results greater than or equal to five times the reporting limit. For results less than five times the reporting limit, the difference between the parent and field duplicate results must be less than or equal to four times the reporting limit for soil/sediments.

Action applies to the affected analyte in all inorganic samples of the same matrix prepared and analyzed by the same method.

The results associated with the non-conforming RPD were qualified "J/UJ," as estimates, because of field sampling/laboratory imprecision and/or sample heterogeneity.

The following notations are used in the field precision tables.

RPD: Relative percent difference

NC: RPD could not be calculated

µg/kg: micrograms per kilogram (ppb) and mg/kg: milligrams per kilogram (ppm).

Table 1 – Field Duplicate Precision
National Grid / Equity Samples

Compound	T1SB9 (18-20)	DUP-5/21/14	Units	RPD (%)	Quals
Aluminum	19500	20200	mg/kg	3.5

Percent Solids	52.5	52.7	%	0.38	

7.0 Notes

Positive organic and inorganic results less than the reporting limit, but greater than the method detection limit (MDL) were qualified “J,” as estimated concentrations, due to increased uncertainty near the detection limit. The “J” qualifiers were maintained in the data validation.

Matrix spike and matrix spike duplicates, laboratory duplicates, and ICP serial dilutions that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

Subject: RE: Equity MGP sampling plan update

Matt,

Please proceed with full forensics analysis of sample T2-SB1 (15-20) (MC30767-1A).

Do not analyze MC30767-2A for forensics parameters.

Thanks.

dave

Dave,
I did not have the other email addresses, so I queued the rush TPH results to you and Brad to distribute accordingly.
Does that work for you?

Thanks
Matt

Matt,

Soxhlet prep for PCPs – not required; can use microwave or ASE or other standard soil prep method

Data package – AECOM is checking, but probably standard commercial package

Compound list: -- will get them today

You should be contacted with AECOM's lab samples as AECOM, and bill AECOM

Final lab reports to Pete Cox and Josh Millard at AECOM. Rush TPH results get emailed to me, Paul Lundegard, Tom Campbell (NatGrid), and Brad Rochlen.

If you have questions for AECOM, Pete Cox is your primary point of contact. Jennifer and Josh also might help.

Dave,
I just want to clarify a few questions. I apologize if I am being redundant to previous conversations. I just want to make sure we are on the same page.

1) Data package required (Level IV?)
2) PCB Extraction method (soxhlet?)
3) Compound lists for VOCs and SVOCs?
4) Should this be logged in under META or AECOM (I presume AECOM)?
5) Please provide a report distribution list

Thanks
Matt

Subject: Equity MGP sampling plan update

James,

I talked to Matt yesterday about the Equity MGP samples that you are receiving from AECOM. Here's an update and some details.

All of the results for all samples will be reported to NYS DEC and the Newtown Creek PRP Group. Therefore, plan on standard QC for all methods, conventional and forensic (if any).

TPH is on 3-day TAT. We especially need nice cgrams to look at; however, the data will go to DEC and NTC Group, so it needs to meet method criteria. Whether or not samples are analyzed for full forensics will depend on review by our forensics group.

5.1 5

MC30767AR: Chain of Custody
Page 5 of 7

Do not provide interpretation or comments on any of the data other than simple observations such as the sample had excessive water or pebbles or other issues related to completing the analyses.

All samples are to be stored frozen for up to 1 year or until released by the client.

Correspondences regarding this project are confidential and if you write anything to me, please cc Brad Rochlen (see email above). Also, do not send data directly to me; it needs to go through AECOM, at least for now.

It's my understanding that you are contracted directly to AECOM. You should check that any agreements you have with them are consistent with this email and the prices that I gave Matt yesterday.

Don't hesitate to call me with questions.

Matt,

Once again AECOM waited until the last minute to tell me that they will be sampling. Can you review the scope (below) and let me know if you can get a bottle order to them by Fri.? I'll work on the pricing – although I gave them this months ago.

This is follow-up work to the Equity project we did last August.

Dave

Subject: RE: Equity MGP sampling plan update

Matt,

Please proceed with the full forensics analysis of samples:

T1-SB7 (16.5-17.5)	MC30823-1
T2-SB4 (5-10)	MC30823-9
T1-SB9 (15-18)	MC30823-5

Thanks

dave

Please note our new address and telephone number. Thank you.

Subject: RE: Equity MGP sampling plan update

Matt,

Please proceed with full forensics analysis of sample T2-SB1 (15-20) (MC30767-1A).

Do not analyze MC30767-2A for forensics parameters.

Thanks.

dave

Executive Summary

Overview

A data assessment was performed by Gregory A. Malzone of AECOM Pittsburgh on two data packages from TestAmerica Laboratories, Inc., 777 New Durham Road, Edison, NJ, 08817 for the analysis of soil samples collected March 26 – April 1, 2015 at the Equity former MGP site.

The following analytical methods were requested on the chain-of-custody (CoC) records.

- Volatile Organic Compounds by USEPA SW-846 Method 8260C
- Semivolatile Organic Compounds by USEPA SW-846 Method 8270D
- Gasoline Range Organics (GRO) by USEPA SW-846 Method 8015D
- Diesel Range Organics (DRO) by USEPA SW-846 Method 8015D
- Total TAL Metals by USEPA SW-846 Methods 6010C and 7471B
- Percent Solids for Dry Weight Corrections by Method SM2540 B mod.

The data were evaluated for conformance to method specifications and qualifiers were applied using the USEPA Region II SOPs and the validation criteria set forth in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2008, with additional reference to *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, EPA 540/R-99-008, May 1999 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review*, USEPA-540-R-10-011, January 2010, with additional reference to *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, EPA-540-R-04-004, October 2004, as they applied to the analytical methods employed. Field duplicate RPD review and applicable control limits were taken from the USEPA *Region I, New England Data Validation Functional Guidelines for Evaluating Environmental Analyses*, December 1996.

The samples were processed and the results were reported under three sample delivery groups (SDGs) 460-92355-1, 460-92511-1 and 460-92568-1. Table 1 provides a sample submittal list with the field IDs cross-referenced with the TestAmerica-Edison IDs.

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, matrix spike/matrix spike duplicates (MS/MSD), surrogate recoveries, laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

Inorganic data quality was evaluated by reviewing the following parameters: holding times, matrix spikes, initial calibrations, continuing calibration verification standard recoveries, contract required detection limit standard recoveries, laboratory control samples, ICP interference check sample recoveries, ICP serial dilution results, field and laboratory duplicates, laboratory blanks, and analyte quantitation.

Acetone and methylene chloride contamination was evident and caused the negation of several positive results. One non-detect volatile result (1,2-dibromo-3-chloropropane) was rejected because of poor instrument sensitivity. Six non-detect semivolatile results (2,3,4,6-tetrachlorophenol, 3-nitroaniline, 4,6-dinitro-2-methylphenol, dibenz(a,h)anthracene, hexachlorocyclopentadiene and pentachlorophenol) were rejected because of matrix spike recoveries being less than 10%, indicating severe matrix effects. All other data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the compounds and analytes in the media tested (i.e., soil) with the qualifications described below. Completeness of 99.7% was achieved for this data set. This is within the goal of 90-100% and is acceptable.

A glossary of data qualifier definitions is included in Appendix A of this report. The data qualifier summaries are attached as Appendix B of this report.

Each noncompliance with specific data usability criteria that required data qualification is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

460-29355-1

Blank Contamination (pp. 1161-1162, 1167-1168, 1178-1179, 1189-1190, 1195-1196, 1205-1206, 1211-1212, 1218-1219, 1225-1226): Acetone and methylene chloride were detected in several of the method preservation and laboratory method blanks. The associated sample results were qualified using the criteria summarized in the table below.

For common lab contaminants (methylene chloride, acetone, 2-butanone):			
Blank type	**Blank result**	**Sample result**	**Action for samples**
Method, Storage, Trip, or Field	Detects	Not detected	No qualification
	≤ 2x RL	< 2x RL	Report sample RL value with a U if <RL. Report sample result with a U if >RL.
		≥ 2x the RL	No qualifications

RL: Reporting limit.

Calibrations (pp. 843, 1022-1025, 1032-1035, 1050-1053, 1068-1071,1078-1081, 1087-1090, 1097-1100): The continuing calibration verification (CCV) percent differences/drifts for methyl acetate, methylcyclohexane, 4-methyl-2-pentanone, 2-hexanone, 1,1,2,2-tetrachloroethane and 1,2-dibromo-3-chloropropane were less than the lower method limit of -20% on 03/29/15 at 05:25 on instrument CVOAMS2. The methyl acetate, methylcyclohexane, 4-methyl-2-pentanone, 2-hexanone, 1,1,2,2-tetrachloroethane and 1,2-dibromo-3-chloropropane results for associated sample SB44 (38-40) were non-detect and were qualified “UJ,” as estimates, because of low instrument bias.

The CCV percent differences/drifts for methyl acetate, 4-methyl-2-pentanone, 2-hexanone, 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane and 1,2,3-trichlorobenzene were less than the lower method limit of -20% on 03/30/15 at 07:38 on instrument CVOAMS2. The methyl acetate, 4-methyl-2-pentanone, 2-hexanone, 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane and 1,2,3-trichlorobenzene results for associated samples SB43 (45-48) and DUPE-032615 were non-detect and were qualified “UJ,” as estimates, because of low instrument bias.

The 04/02/15 initial calibration relative response factor for 1,2-dibromo-3-chloropropane was less than the method minimum limit of 0.05 on instrument CVOAMS2. The 1,2-dibromo-3-chloropropane result for associated sample SB40 (20-23.5) was non-detect and was qualified “R,” as rejected, because of poor instrument sensitivity.

The CCV percent differences/drifts for acetone, bromomethane, methyl acetate and bromoform were less than the lower method limit of -20% on 04/07/15 at 07:29 on instrument CVOAMS3. The acetone, bromomethane, methyl acetate and bromoform results for associated sample SB41 (35-37) were non-detect and were qualified “UJ,” as estimates, because of low instrument bias.

The CCV percent difference for dichlorodifluoromethane was less than the lower method limit of -20% on 03/30/15 at 19:20 on instrument CVOAMS9. The dichlorodifluoromethane results for associated samples SB43 (49-50), SB44 (9-10) and SB44 (49-50) were non-detect and were qualified “UJ,” as estimates, because of low instrument bias.

The CCV percent differences for chloromethane, chloroethane and vinyl chloride were less than the lower method limit of -20% on 04/03/15 at 05:29 on instrument CVOAMS9. The chloromethane, chloroethane and vinyl chloride results for associated samples SB42 (9-10), SB42 (35-37.5) and SB42 (49-50) were non-detect and were qualified “UJ,” as estimates, because of low instrument bias.

The CCV percent differences for acetone, carbon disulfide, 2-butanone, 1,1,1-trichloroethane, carbon tetrachloride, methylcyclohexane, 4-methyl-2-pentanone, 2-hexanone and isopropylbenzene were greater than the upper method limit of 20% on 04/03/15 at 05:29 on instrument CVOAMS9. The positive acetone result for sample SB42 (9-10) was qualified "J+," as an estimated concentration because of high instrument bias and method blank contamination. The 2-butanone result for sample SB42 (9-10) and the carbon disulfide result for sample SB42 (35-37.5) were estimated below the reporting limits and must be considered as biased high (i.e., qualified "J,") because of high instrument bias. All other associated results were non-detect and did not require qualification in response to the high instrument bias.

The CCV percent differences for methyl acetate, chloromethane, 1,1,2,2-tetrachloroethane and vinyl chloride were less than the lower method limit of -20% on 04/05/15 at 05:34 on instrument CVOAMS9. The methyl acetate, chloromethane, 1,1,2,2-tetrachloroethane and vinyl chloride results for associated samples SB40 (9-10) and SB41 (38-39) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The CCV percent differences for bromomethane and acetone were greater than the upper method limit of 20% on 04/07/15 at 12:14 on instrument CVOAMS9. The bromomethane and acetone results for associated samples SB43 (8-9), SB41 (5-10) and SB40 (50-55) were non-detect and did not require qualification in response to the high instrument bias.

Laboratory Control Sample Recoveries and RPDs (pp. 385-388, 401-402, 405-408): The RPD between the LCS 460-289168/4 and 5 recoveries for trichlorofluoromethane was greater than the maximum quality control limit. Samples SB43 (49-50), SB44 (9-10) and SB44 (49-50) were affected. Trichlorofluoromethane was not detected in samples SB43 (49-50), SB44 (9-10) and SB44 (49-50) and the LCS/D recoveries were within the quality control limits. No data qualifications were required.

The LCS 460-290757/8 recovery for acetone was greater than the upper quality control limit. Acetone was not detected in associated samples SB43 (8-9), SB41 (5-10) and SB40 (50-55). No data qualification was required in response to the high method bias.

Matrix Spike Recoveries and RPDs (pp. 415-416, 419-420): Several SB41 (5-10) MS and/or MSD target compound recoveries were less than the lower advisory limits, but greater than 10%. The associated results for sample SB41 (5-10) were non-detect and were qualified "UJ," as estimates, because of low bias due to matrix effects.

Reporting Limits (Form 1): Samples SB43 (45-48), DUPE-032615, SB44 (38-40) SB40 (20-23.5) and SB41 (35-37) required analysis using the medium-level soil (MLS) methanol extract to bring the high level target compound concentrations into the calibration range. The MLS method elevated the method detection limits and reporting limits. The surrogate recoveries were within the quality control limits. No data qualifications were required.

2.0 Semivolatile Organic Compounds

460-29355-1

Surrogate Recoveries (p. 1402): Samples SB43 (45-48) and DUPE-032615 required analysis at an initial 50-fold dilution to bring the target compound concentrations into the calibration range. The dilutions were high enough to dilute out the surrogates. The surrogate recoveries could not be used to assess method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in control. No data qualifications were necessary based on professional judgment.

The phenol-d5 surrogate recoveries for samples SB42 (9-10) and SB42 (49-50) were less than the lower quality control limit, but greater than 10%. The USEPA National Functional Guidelines allow one surrogate to be nonconforming lo long as the recovery is greater than 10%. No data qualifications were required.

Calibrations (pp. 2054-2056, 2075-2077, 2095-2097): The continuing calibration verification (CCV) percent difference for 2-nitroaniline was less than the lower method limit of -20% on 04/01/15 at 17:19 on instrument CBNAMS11. The 2-nitroaniline results for associated samples SB42 (9-10), SB42 (35-37.5) and SB42 (49-50) were non-detect and were qualified “UJ,” as estimates, because of low instrument bias.

The CCV percent difference for di-n-octyl phthalate was greater than the upper method limit of 20% on 04/01/15 at 09:11 on instrument CBNAMS12. The di-n-octyl phthalate results for associated samples SB43 (8-9), SB43 (45-48), SB43 (49-50), DUPE-032615 and SB44 (9-10) were non-detect. No data qualifications were required in response to the high instrument bias.

The CCV percent drift for 2,4-dinitrophenol was less than the lower method limit of -20% on 04/03/15 at 05:32 on instrument CBNAMS12. The 2,4-dinitrophenol result for associated sample SB41 (5-10) was non-detect and was qualified “UJ,” as an estimate, because of low instrument bias.

The CCV percent differences for 2,2'-oxybis[1-chloropropane], N-nitrosodi-n-propylamine, indeno[1,2,3-cd]pyrene and dibenz(a,h)anthracene were greater than the upper method limit of 20% on 04/06/15 at 02:15 on instrument CBNAMS12. The indeno[1,2,3-cd]pyrene and dibenz(a,h)anthracene results for associated samples SB40 (9-10), SB40 (20-23.5) and SB41 (35-37) were positive and were qualified “J,” as estimated concentrations, because of high instrument bias. The 2,2'-oxybis[1-chloropropane] and N-nitrosodi-n-propylamine results were non-detect. No data qualifications were required in response to the high instrument bias.

Laboratory Control Sample Recoveries (pp. 1405-1412): The LCS 460-289266/2-A and 460-289266/3-A recoveries for atrazine, di-n-octyl phthalate and hexachlorocyclopentadiene were greater than the upper quality control limits. The atrazine, di-n-octyl phthalate and hexachlorocyclopentadiene results for associated samples SB43 (8-9), SB43 (45-48), SB43 (49-50), DUPE-032615, SB44 (9-10), SB44 (38-40) and SB44 (49-50) were non-detect. No data qualifications were required in response to the high method bias.

The LCS 460-289513/2-A and 460-289513/3-A recoveries for atrazine, benzo(a)pyrene and hexachlorocyclopentadiene were greater than the upper quality control limits. The atrazine, benzo(a)pyrene and hexachlorocyclopentadiene results for associated samples SB42(9-10), SB42(35-37.5) and SB42(49-50) were non-detect. No data qualifications were required in response to the high method bias.

The LCS 460-289793/2-A recoveries for di-n-octyl phthalate and hexachlorocyclopentadiene were greater than the upper quality control limits. The di-n-octyl phthalate and hexachlorocyclopentadiene results for associated samples SB40 (9-10), SB40 (20-23.5), SB40 (50-55), SB41 (5-10), SB41 (35-37) and SB41 (38-39) were non-detect. No data qualifications were required in response to the high method bias.

Matrix Spike Recoveries and RPDs (pp. 1413-1416, 1419-1422): The SB42 (9-10) MS/MSD recoveries for 2,4-dinitrophenol were less than 10%. The 2,4-dinitrophenol result for sample SB42 (9-10) was non-detect and was qualified "R," as rejected, because of significant low bias due to matrix effects.

Several SB42 (9-10) MS and/or MSD target compound recoveries were less than the lower advisory limits, but greater than 10%. The associated results for sample SB42 (9-10) were non-detect and were qualified "UJ," as estimates, because of low bias due to matrix effects.

The RPD between the SB42 (9-10) MS and MSD recoveries for pentachlorophenol was greater than the maximum advisory limit. The pentachlorophenol result for sample SB42 (9-10) was non-detect and was qualified "UJ," as an estimate, because of imprecision due to matrix effects.

The SB41 (5-10) MS and/or MSD recoveries for 2,3,4,6-tetrachlorophenol, 3-nitroaniline, 4,6-dinitro-2-methylphenol, dibenz(a,h)anthracene, hexachlorocyclopentadiene and pentachlorophenol were less than 10%. The positive and non-detect 2,3,4,6-tetrachlorophenol, 3-nitroaniline, 4,6-dinitro-2-methylphenol, dibenz(a,h)anthracene, hexachlorocyclopentadiene and pentachlorophenol results for sample SB41 (5-10) were qualified "J-/R," as estimates or as rejected, because of significant low bias due to matrix effects or sample heterogeneity.

The SB41 (5-10) MS and/or MSD recoveries for 2-methylnaphthalene and 2-nitrophenol were less than the lower advisory limits, but greater than 10%. The positive and non-detect results for sample SB41 (5-10) were qualified "J/UJ," as estimates, because of low bias due to matrix effects or sample heterogeneity.

The SB41 (5-10) MS and/or MSD recoveries for 2-chloronaphthalene, di-n-octyl phthalate, 2,4-dinitrotoluene and atrazine greater than the upper advisory limits. The 2-chloronaphthalene, di-n-octyl phthalate, 2,4-dinitrotoluene and atrazine results for sample SB41 (5-10) were non-detect. No data qualifications were required in response to the high bias due to matrix effects.

The RPD between the SB41 (5-10) MS and MSD recoveries for 4-nitroaniline was greater than the maximum advisory limit. The 4-nitroaniline result for sample SB41 (5-10) was non-detect the spike recoveries were within the advisory limits. No data qualifications were required.

3.0 Petroleum Hydrocarbons

460-29355-1 Gasoline Range Organics

Dilutions/Surrogate Recoveries (p. 2284): Samples SB43 (45-48), DUPE-032615 and SB40 (20-23.5) required analysis at an initial 2500-fold or greater dilution to bring the GRO concentration into the calibration range. The dilutions were sufficiently high to dilute out the surrogates. The surrogates could not be used to assess method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in control. No data qualifications were required.

460-29355-1 Diesel Range Organics

Matrix Spike Recoveries (pp. 2459-2464): The DRO spike added to SB41 (5-10) MS/MSD was less than 25% of the original sample result. The spike recovery and RPD could not be calculated. No data qualification was required.

The SB43 (49-50) MS/MSD recoveries for DRO were less than the lower advisory limit, but greater than 20%. The positive DRO result for sample SB43 (49-50) was qualified "J-," as an estimated concentration, because of low method bias.

Dilutions/Surrogate Recoveries (p. 2455): Samples SB41 (8-9), SB43 (45-48), DUPE-032615, SB40 (9-10), SB40 (20-23.5), SB41 (5-10) and SB41 (35-37) required analysis at an initial 10-fold or greater dilution to bring the DRO concentration into the calibration range and/or to minimize matrix interference. The dilutions were sufficiently high to dilute out the surrogates. The surrogates could not be used to assess method accuracy. There were sufficient, acceptable quality control data to show that the analytical process was in control. No data qualifications were required.

4.0 Total Metals

460-92355-1

Matrix Spike Recoveries (pp. 2717, 2722): The spike added to SB41 (5-10) MS for aluminum, calcium, copper, iron, manganese, lead, zinc and mercury was less than 25% of the original sample concentration. The matrix spike recoveries and RPDs could not be calculated. The SB41 (5-10) post-digestion spike recoveries for aluminum, calcium, copper, iron, manganese, lead, zinc and mercury were within the acceptance limits of 80-120%. No data qualifications were required.

The SB41 (5-10) MS recovery for antimony was less than the lower advisory limit of 75%, at 28%. The SB41 (5-10) post-digestion spike recovery for antimony was within the acceptance limits of 80-120%. All samples were affected. The positive and non-detect antimony results were qualified "J/UJ," as estimates, because of low bias attributable to matrix effects and/or poor method accuracy.

Laboratory Duplicate Precision (p. 2725): The relative percent difference (RPD) between the original and replicate calcium results for sample SB41 (5-10) was greater than the validation limit for results greater than five times the reporting limit of 35%. All samples were affected. All calcium results were positive and were qualified "J," as estimated concentrations, because of method imprecision and/or sample heterogeneity.

Reporting Error (pp. 4412-4424): In the mercury raw data section of the data package, the mercury 04/04/15 initial calibration and raw data run log are missing. Instead the mercury data for 01/23/14 was inserted. The correct data pages were requested and were received for evaluation on 04/21/15.

5.0 Field Duplicate Precision

A field duplicate sample was collected for sample SB43 (45-48). The calculated RPDs are listed in Table 2 below. Field duplicate results were evaluated using the following criteria.

Organics: The RPD must be ≤ 50% for soil/sediments for results greater than or equal to two times the reporting limit. If one of the results is non-detect or less than two times the reporting limit, and the duplicate is greater than two times the reporting limit, the difference between the parent and field duplicate results must be less than or equal to two times the reporting limit.

Action applies only to the affected analyte in the organic duplicate sample pair.

Inorganics: The RPD must be ≤ 50% for soil/sediments for results greater than or equal to five times the reporting limit. For results less than five times the reporting limit, the difference between the parent and field duplicate results must be less than or equal to four times the reporting limit.

Action applies to the affected analyte in all inorganic samples of the same matrix prepared and analyzed by the same method.

Results associated with nonconforming RPDs were qualified "J," as estimated concentrations, because of field sampling/laboratory imprecision and/or sample heterogeneity.

Table 2 - Field Duplicate Precision - National Grid / Equity Soil Samples

Compound	SB43 (45-48)	DUPE-032615	Units	RPD (%)	Quals
Benzene	48000	470000	µg/kg	163	J

mg/kg: milligrams per kilogram (ppm)
%: Percent

6.0 Notes

Positive results less than the reporting limit, but greater than the method detection limit (MDL) were qualified "J," as estimated concentrations, due to increased uncertainty near the detection limit.

Matrix spike and matrix spike duplicates, laboratory duplicates, and ICP serial dilutions that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

Tentatively identified compound (TIC) results that have been reviewed and approved by the laboratory analyst were qualified "NJ," as presumptively present at an estimated concentration. Non-target compounds with a general tentative identification or labeled as "unknown" were qualified "J," as an estimated concentration.

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but may be biased high.

J- The result is an estimated quantity, but may be biased low.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.
